Seasonable Notes on Easter Plants.

The preparation of Easter stock is naturally one the most important parts of the work of the plant grower at this season, the trade of that festal time in flowering plants being by far the greatest for any one occasion of the year. But so much has been said about this portion of the work by various authoritative writers in the past that to old hands at the business it seems almost like useless repetition to discuss it at any length. The reason offered for referring to the matter is found in the fact that each season produces some beginners in the trade who naturally look for information to the trade journals, and to ask questions regarding trade matters that are not quite clear to them. The first point of importance, and one that should be kept well in mind from this time forward, is that Lent begins on February 12 and consequently Easter falls on March 30, a sufficiently early date to require fairly steady forcing for any slow subjects that one may have to handle.

When forcing Lilium longiflorum many growers prefer to have the buds in sight on Ash Wednesday, and this rule is especially applicable when preparing for an early Easter, for there may be many dull days in February and March, and if there are a few plants that move along too fast it is an easy matter to remove them to a cooler house in order to retard the flowers.

Since there has been so much difficulty with diseased lily bulbs of late years, the practice of potting them up in 4-inch pots and afterward shifting the plants into their blooming pots has been much used, this method economizing space during the early part of the season, and also giving a chance to weed out the diseased plants before the final potting. It is also a convenient plan when it is desired to make up some large specimen plants in 8-inch or 10-inch pots. The plants, having been grown in small pots, may be grouped much better in the large pot without disturbing the roots.

The repotted lilies require a little judgment in the matter of watering, as at that period it is quite easy to get them sodden, and thus to check their root action to some extent. In fact, during dull weather it is better to be a little sparing with the water on these plants, provided they are not allowed to get very dry, but after the buds are showing, plenty of water will be needed and also some liquid manure at intervals of a few days. Lilium longiflorum, and also its relative, L. Harrisii, will bear hard forcing after the buds are up, but under such treatment they require a good deal of moisture, and any neglect in this particular is likely to be shown in tipped leaves, a condition that takes much from their value among a critical trade.

A good Easter lily in a 6 inch pot should be about thirty inches high, have clean, dark foliage down to the pot, and carry five to six flowers. Stock of this description seldom fails to find a ready market, a plant of this size being much more salable than those of larger size, and carrying flowers enough to make a paying crop. Another hint in regard to the Easter lily business is that they should be neatly staked and tied and the pots thoroughly scrubbed before they are sent into the store, for a lily in a dirty, slippery pot is an abomination to a careful retailer and far from attractive to his customers.

Hydrangeas for Easter should be moving along nicely now, for it should be remembered that these plants ought to have fully twelve weeks to bring their flowers to perfection, and many an unfortunate grower has had the disheartening experience of watching the trusses on his hydrangeas still remaining green while the days of Easter week were gliding swiftly by, and the profits of that bench or house were vanishing with equal rapidity. Those hydrangeas also remind us of the fat boy depicted by Dickens, inasmuch that they are always hungry and thirsty, and especially is this the case after the flowers are showing, when liquid manure should be given freely. A steady night temperature of 65° is about right for these plants when brought into heat at the right time, and if they can be brought into bloom in time to give them a week in a cool house to harden them off before being sold, the plants will be much more satisfactory to the buyer.

Azaleas do not require much forcing in order to bring them in safely at Easter, and next to the lilies are the greatest favorites with the public, though these plants are so often neglected in the matter of watering that it is not unusual to see many of them in a sadly bedraggled condition by Easter Monday, a condition that should not appear in that short space of time if the purchasers of these plants would only appreciate how much water such a mass of flowers will evaporate in twenty-four hours. The circulars giving information about the treatment of house plants that are being distributed by many retail florists are decidedly beneficial to the trade in general, for the

greater success the amateur gardener enjoys the greater will he the temptation to make further experiments, and with the natural result of increasing the sales of the neighboring florist.

Cytisus, or genista, does not attract the same attention that this beautiful plant used to do a few years ago, and a whole house of it is a little out of the ordinary except in the largest cities, but for all this it is a good plant for certain purposes, and no other of the same color is quite so graceful and effective in an Easter decoration as the cytisus, even though the flowers may drop rapidly in a dry room.

Crimson Rambler and other pot roses are always in demand at Easter, and one should always give them time enough in the forcing process, from twelve to fourteen weeks from the dormant condition to the opening flowers being enough in most cases. About half the period from the time the plants are brought into heat they should be forced quite gently, and the flowers will be much better if the night temperature does not exceed 60° at any time, for too much heat will only give a weak growth and flowers of little substance.

During all these forcing operations green aphis must be guarded against, for at such time this pest spreads very rapidly, and it is a good practice to keep some chopped tobacco stems among the plants and also to vaporize some tobacco extract in the greenhouse at least once a week.

W. H. TAPLIN.

John Chambers.

John Chambers was born in Canterbury, County of Kent, England, and was educated at Sheldwich and Faversham Grammar Schools. In June, 1861, he was sent to learn the gardening and florists' business under Mr. Langley, then head gardener for Earl Sondes. After serving three years here, he went to Hugh Low & Co., of Upper Clapton, for one year, after which he drifted back to his native county, and was employed at Belmont Park for three years, during the last two years as foreman. He spent a year in the landscape department of B. S. Williams & Son, of Upper Holloway and then secured a position as gardener at Hartsholme Hall, Lincoln, where he remained until 1871. Then he decided to try his fortunes in Canada, and landed in Toronto, where he secured employment with late ex-Alderman Jas. Fleming, for whom he was foreman for over six years. In 1878 Mr. Chambers was appointed by the City Council of Toronto to take charge of and lay out the new Exhibition Park. So well was this work done that in the spring of 1884, he was appointed by the Council as superintendent of all Toronto public parks. At this time there was practically no park system in Toronto, only several pieces of ground owned by the city. He took hold of these and in his comprehensive way gradually worked them up to their present splendid condition. Other pieces of ground around the city, which were almost waste, he converted into flower gardens and play grounds. Since then High Park and Riverdale Park have been added and are in progress of development. At Exhibition Park, where Mr. Chambers resides, there is a fine collection of orchids, nepenthes and stove plants, and many old favorites, which are no longer to be seen in the trade, are found here. The perfection of these plants proves him to be a thorough practical gardener, as well as a man of great organizing power, and not least remarkable is his ability to have so much work executed with the appropriation which the city grants. He has probably done more for the interests of horticulture than any other man in his vicinity. On the formation of the Toronto Florists' and Gardeners' Club he was elected president, and re elected for two years following, after which he has always been on the executive committee, until December 17, 1901, when he was again elected president by acclamation. Of the other local societies interested in horticulture he is honorary director of the Industrial Board, was the first president of the Horticultural Society, and is second vice-president of the Electrol District Society.

H. G. D.

A House of Mignonette.

The illustration opposite is reproduced from a photograph of a house of mignonette, taken January 10, at Emil Buettner's establishment, Park Ridge, Ill. The picture conveys but a faint idea of the high quality of the plants, which are from seed of a strain carefully selected

JOHN CHAMBERS.
(President Toronto Florists' Club.)

by Rudolph Asmus, of New Durham, N. J., for a number of years past. The spikes are from eighteen to twenty-four inches high. Mr. Buettner sows the seed in 3-inch pots during the latter part of July, thinning out the plants until only two of the strongest remain in each pot. From the pots the plants are transferred to the benches about September 15, placing them eight by twelve inches apart. When they commence to grow in the benches, the top of each plant is pinched out to induce branching. The soil employed is a stiff loam prepared like that for roses.

Iowa Florists Organize.

Florists representing fifteen counties in Iowa recently met at Chariton and organized the Southwestern Iowa Florists' Association. There was a general discussion on trade topics and the following officers were elected: President, J. F. Wilcox, Council Bluffs; financial secretary, C. G. Anderson, Red Oak; corresponding secretary, I. C. Hon, Creston. Des Moines is the next place of meeting.

The Business End of Horticulture.

[*An address by Patrick O'Mara, of New York, before the Massachusetts Horticultural Society, Boston, January 25, 1902.*]

LADIES AND GENTLEMEN:—When our good friend, Mr. Low, invited me to read a paper on some subject connected with horticulture, I explained, as I did once before, that, while being grateful for the honor, I was at a loss to know upon what lines I could prepare a paper worthy of the attention of this society, second, as it is, to none in the world. I solicited his advice, and the advice of the committee through him, and was further complimented by the assurance that anything I should prepare would in all likelihood be satisfactory to them. Being thus, so to speak, at my wits' end, I chose "The Business End of Horticulture" as a title for such observations as I might offer you.

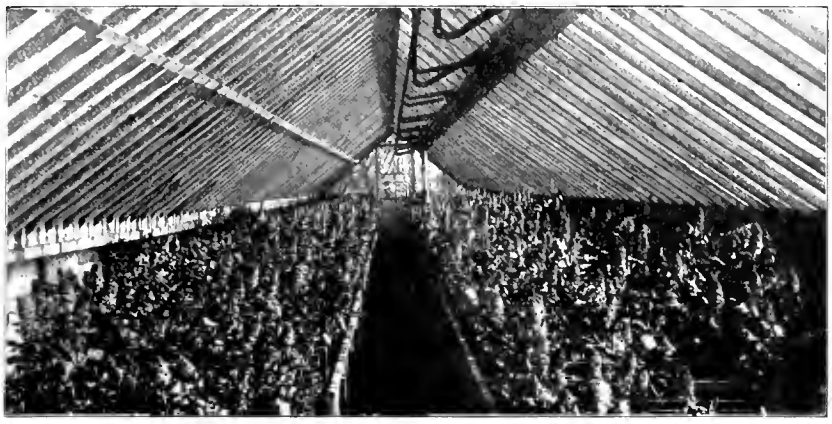
I will stick to the text as closely as possible, but at the very outset the temptation to wander is irresistible. Some may ask if I consider the end of horticulture to be business. This prompts me to observe that I am not bold enough to prophesy the end of horticulture. It also prompts me to observe that since coining the title, I have been industriously engaged in a mental quest for the business end of it; but up to the present moment I have not run down any end that looks most like it, or tied a knot in it. The quest for the business end of a bee or a mule would be a simpler matter.

An acquaintance of mine in the trade once sagely remarked in my hearing that in his opinion any fool could grow good plants, but that it required a man of great wisdom to sell them. It looked to him as if he had discovered the business end for certain. I may remark parenthetically that the gentleman referred to was a grand and gloomy failure in both departments; he is a fair sample of the know-it-all. There is a story told to the effect that a young man who was ambitious to succeed in business once obtained the ear of the late Commodore Vanderbilt and sought his advice. He is reported to have asked him if the secret of success in business was knowledge, or was it some fortunate inspiration? The gruff old Commodore tersely replied: "No, my young friend; not inspiration; perspiration, sir, perspiration." And it may be truly said that if the business joint of horticulture is anywhere in particular, it is at the elbow, and it should be well greased.

Eternal vigilance is the price of much that we have and hold; it is particularly the price the successful horticulturist must pay. The "art that doth mend nature" is not one for the dilettante; it is one for the sober, steady, persevering, painstaking, intelligent worker. The cry goes up from many who fail: "I have no luck with my stuff, like so and so." That wail is even heard from the professional florist, who ought to know better. If he watched Messrs. So-and-So he would discover that they are men who study cause and effect and have the sense to apply as well as the energy to execute. They may, perchance, be unable to prepare an exhaustive treatise on the structural formation of plants or give an analysis of the soil, their methods may be rule of thumb ones, their school may be, and undoubtedly in ninety and nine cases out of a hundred it is, an empirical one; but they obtain gratifying results, and that's the main point. Doctors' children are not always the healthiest.

If there is any calling, trade or profession which requires keen discrimination, quick perception, intuitive grasp and prompt decision in a greater degree than another, it is the horticulturists'. He is dealing with the forces of nature, his charges are mute and cannot announce when something has gone wrong. He must see it; he must do more than that, he must know, if he is to be successful, what is likely to injure them, and see that such is avoided. An ounce of prevention is worth a ton of cure in horticulture. Locking the stable door after the horse is stolen is mighty poor satisfaction. These random remarks, I trust, will be found to have some pointed reference to the "business end" of horticulture.

My experience in the trade has been exclusively along the lines of commercial horticulture, so that necessarily my observations will be mainly confined to matters less or more intimately con-



MIGNONETTE AT EMIL BUETTNER'S, PARK RIDGE, ILL., JANUARY 10, 1902.

nected therewith. I've enjoyed the advantage of some experiences with other branches. I've rubbed elbows with that interesting personage known officially as the "Ornamental Horticulturist," or, as one of my more learned and editorial friends would have him dubbed, the "Ornamentative Horticulturist." A few years ago he was, I suppose, the artist who made striped elephants with a fluffy tail and planted them on the lawn, who made butterflies and ships, birds and beasts, biped and quadruped, who had wheels in his head and got rid of them by expressing himself in wonderful convolutions, rings eccentric and concentric, all in plants that outrivaled Joseph's wonderful coat of many colors. The pity of it is for one of the business ends of horticulture that his tribe did not keep on increasing.

I am reminded of a story in connection with that branch of gardening. An itinerant disciple of the "art that doth mend nature" was called in to lay out some beds on a modest lawn. His "art" had not risen above a round, square and star-shaped bed, so when his whilom employer expressed a desire to supplement them with an oval bed he looked embarrassed; he was not quite sure what an oval bed was. It was explained to him that it was egg-shaped, and he understood. When the owner came around the following day and looked at the oval he was disappointed; it was overweighted at one end. He reproached the "artist" concerning it, and a great light broke in upon him when he was told by him: "Sure, sir, you told me to make it egg-shaped; and isn't an egg bigger at one end than the other?" There is some humor even in horticulture.

A prospective purchaser went into one of the seed shops not a thousand miles from here, where garden and farm implements were displayed, and asked a young clerk if he sold whiffletrees. He was gravely informed that they did not keep them there, but he would inquire of the nursery department. Another purchaser, who was giving an order and soliciting advice from a clerk as to quantities of seed wanted for certain numbers of plants, finally ordered a pound of raffia. The clerk, thinking he was ordering too much of it, gravely asked him how many plants of it he wanted to raise. A tree agent some years ago astonished the home office with the quantities of tree paeonias he was selling. Upon investigation it developed that he was recommending them as shade trees, which had in the summer the wonderful flowers shown in the picture book which he carried. There are incidents connected with the business end of horticulture and they do much to relieve the tedium of the day and hour.

Now let us consider where the business end—or, rather, ends—of horticulture are to be located. First in importance is the seedsman. Even here there is to be found differences; all do not travel on the same road. There is the box trade, for instance, a separate and distinct branch. Long before a town can support a seed store the box makes it appearance. The druggist, the general storekeeper, the jeweler, the grocer, almost any shopkeeper, will be the distributing agent for the seeds. The growth of this branch of the trade is something marvelous. In one generation we have seen one firm expand from a little shop, which barely paid the living expenses of the founders, into a great institution which ranks high among the finest commercial houses in the country. So systematized is this particular branch that the seed box follows close upon the heels of the settler into the most remote quarters. Not many years ago I was in a thirty-day-old town, seventy miles from the nearest railroad station, yet the seed box was there before me. Another branch of the trade was represented among the first settlers there, viz., the seed grower. So we see that two branches of horticulture are found in the forefront of the developing line.

The seed grower is a horticulturist who does not figure very prominently in horticultural essays, and yet he is an important factor. Many people believe that the large seed houses have one big farm where they grow all their seeds. That would be impracticable, for the reason that different seeds can be better grown in different localities. Peas and beans can be better grown in northern than southern localities. California will produce better seeds of many kinds than any other part of the country. Portions of Nebraska produce the best seeds of vine crops to be found in the country. Long Island seems to be the ideal place for cabbage seed production. Portions of Connecticut are unrivaled for the quality of onion seed produced. Northern New York and Maine are unexcelled for potatoes. The great northwest has exceptional possibilities as a seed producing country. Europe still supplies its quota of seeds and bulbs, but with the vast extent of territory over which floats the American flag, with the wide range of temperature, the rich soil, and the energy and intelligence of the men engaged in horticulture, there is every reason to believe that in the near future we will not only produce all we need ourselves, but we will be able to control the markets of the world in seed production.

The seed grower for the most part is a contractor who takes the stock supplied by the seedsman and delivers the entire product. His work is supervised by the seedsman, who inspects the growing crop and carefully "rogues," that is, destroys any plants which are not up to type, which, in other words, show a reversion to an inferior type. It often happens that an improvement will be apparent in individual plants and these are carefully marked, the seed product kept separate and sown the following season. This is the source of many of the improved varieties. It is obvious that the greater the amount of care bestowed on inspection, the greater the intelligence brought to bear upon it, the better in proportion must be the result. It is upon this care and intelligence that reputation is based; hence the difference in stocks sold. The seed grower is often a hybridizer, and to the patient work of these men we owe many of the improved varieties now in existence.

The greatest vehicle, unquestionably, for developing horticulture is the catalogue of the seedsman, the nurseryman and the florist. The first is beyond doubt the most important in its effects and might be called the center from which the business ends radiate, the millions of catalogues distributed annually are an inspiration to the recipients and to the hundreds of thousands who are influenced by seeing their neighbors engaged in horticultural work. Great is the responsibility of the catalogue firms and great is the labor involved. It is undeniably the most trying of all the business ends of horticulture. The men engaged in it must be ever on the watch for new and improved varieties; they must lead and not follow popular opinion; but yet they must be cautious not to get too far in advance. They must be ready to explain why crops fail, they must be able to advise remedies, they must be entomologists, pathologists, be up in soil chemistry, and, when the great extent of the country is considered, it is readily understood that the task is not an easy one.

They must be ready to tell when and what to plant or sow in farm or garden from Puget Sound to Florida keys, from Aroostook to San Diego. They must be able to tell the dear old lady what is the matter with her sick geranium or

LILACS AT EMIL BUETTNER'S, PARK RIDGE, ILL., JANUARY 10, 1902.

her debilitated begonia. They must be prepared to have their honesty impugned whenever a clerk makes a mistake and sends the wrong variety. They must be prepared very often for the same contingency when from causes entirely beyond their control crops fail, plants die or seeds do not germinate. To be successful, the catalogue man must be not only resourceful in business methods, enterprising in developing and introducing varieties of merit, but he must be optimistic, he must be able to communicate his optimism to his customers, he must be liberal in his dealings, be ever patient, be a natural diplomat, and, above all things, be scrupulously careful to send out only the best obtainable.

What is said of the seedsman is also applicable in a great measure to the nurseryman. The details of his business are hardly as numerous, however, consequently not as trying. His business is in a larger degree localized, which tends to simplify it. With San Jose scale, peach yellows and other troubles incident to his stock and the legislative effort to control them, he is not without troubles of his own. The nurseryman, too, must be up in the "ologies," even more so perhaps than the seedsman. He must be a fair lawyer, as well, and be an expert in transportation matters.

The lithographer and the tree agent are powerful agents to the nurseryman. The latter, armed with his book of plates, wends his way over the face of the land, in many cases reviled and thrust out, treated little better than the hobo. His book is sneered at, and, while it may be a trifle highly colored, and the size of the pictured flowers and fruits may be a little exaggerated, yet a long experience has shown that such are the best fitted to tempt the wavering into purchasing something which will really be a benefit to them. It is a case where the end justifies the means, if there ever was one. Many a garden would be given over to weeds which now supplies a few fruit trees and small fruits, many a porch and dooryard would be as bare of living ornament as the proverbial "Job's turkey" was of flesh and feather, were it not for the tree agent and his book. That business end of horticulture is not "one grand sweet song" for the men engaged in it; the emoluments arising from it will not make them plutocrats. Be patient with them, then, if not for themselves, at least for the good they accomplish. The good they do lives after them; the evil is cut down and cast into exterior darkness.

The grower for the catalogue firms is another of the business ends of horticulture; that is, the man who grows plants in quantity on contract or who grows them on speculation to sell in large quantities. His field embraces greenhouse plants, fruit plants, hardy outdoor plants, shrubs, roses and bulbs. It is a safe business on the whole, but is not capable of great development, like the catalogue trade. It is generally followed and taken up by men who have some land, but little working capital, and the profits are as a rule very meager. Because of the limited capital with which it can be entered, provided the land is already secured, a great many of the smaller nurserymen, florists, and even farmers, have entered it of late years, and it may be safely said to be a well-plowed field at the present time.

Because of the fact that these men are not in touch with the retail market they grow many things for which there is not ready sale. Failing to obtain buyers for these at remunerative prices, they are frequently taken up at a sacrifice and pushed by catalogue men, to the detriment of better things. I think it may be accepted as an axiom that the successful catalogue business man must be a bona fide producer, either under his own direct control or by the contract system. This applies to plants more than seeds or bulbs, which can be treated as merchandise. The expense of catalogues, advertising, packing and growing hardly admit of developing a large business by buying plants and selling again; besides, there is always the trade grower who has a surplus of something inferior to offer at a tempting price, and it is well to beware of the "great pennyworth."

The business end of horticulture represented by the cut flower grower is perhaps the simplest, in a business sense, of any. In that the skill of the grower is the paramount issue. His product is sold for what it is worth on sight. Although the market takes exasperating tumbles, he has little, if anything, to do with it. He is saved the nerve wear incident to bargaining, planning how to get rid of his product, how to get his money after he has sold, and the many and vexatious problems incident to barter and sale. I speak of the grower who supplies the large cities and consigns to a commission house. Of course he is constantly consigning the commission man to a place warmer than his hottest greenhouse, but that is his privilege, and the commission man gets accustomed to it, so no one is much hurt. The market is cut out for him. The rose grower has the great triology of Beauty, Bride and Bridesmaid. The carnation grower has a little more vexed problem as to the varieties he will grow, but it is plain sailing for the violet grower.

CYPRIPEDIUM EXUL X LATHAMIANUM.

(See "Cypripedium Blooms from England.")

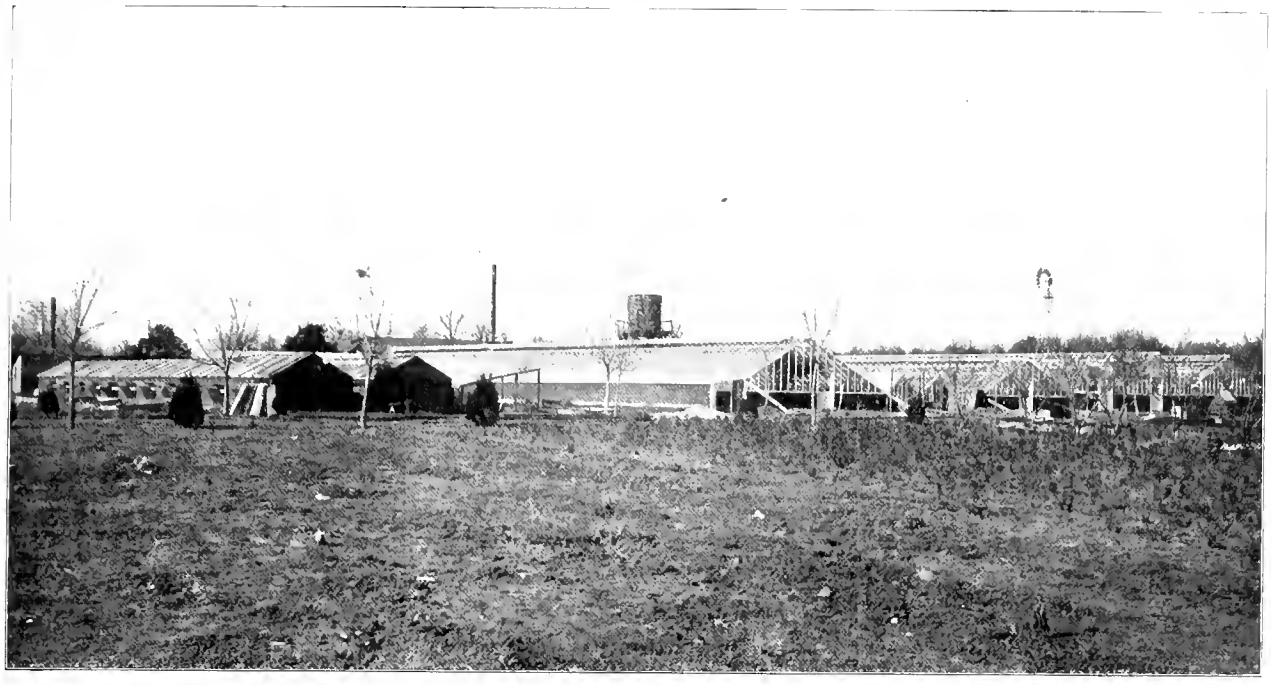
The various committees of the leading trade societies settle many a problem for the carnationist and chrysanthemum grower, but they like to nibble at the new things so as not to be caught napping. This gives them a chance to grumble once in a while but it makes life interesting for them. There is always something new coming up in roses, too, to vex the grower. If the man who gets hold of the new one first has a reputation and can succeed in growing it well it is an easy matter for him to get a market for the plants and so turn an honest penny.

But business instinct counts just as heavily in growing cut flowers as in the other business ends of horticulture. It was business instinct which years ago influenced one of our leading growers of roses to discard every flower which did not come up to his standard. That policy made his reputation and was the foundation of his success. It worked both ways; it concentrated his efforts on producing something up to that standard and maintaining it, while it made his reputation. It did more; it elevated the standard and really made two classes of growers in all lines of cut flower growing, the one which aims at "fancy" flowers and which embraces all the high class establishments, the other which does the best he can and takes things as they come. I've been among growers of violets and have seen flowers discarded for slight imperfections of color which the unobservant eye would scarcely detect. I've seen roses discarded which a few years ago would be sent to the market for what they would bring. A walk through the wholesale districts in any of the large cities will reveal to the observer stocks of roses, carnations, violets, and so forth, which seem to be different varieties although the same, the difference being in the growing mainly, but also in the care with which the cutting, keeping and packing are done.

It is one of the most pleasant branches of horticulture and one of the most remunerative for the capital invested. It has developed fastest of all during recent years and although the constant cry goes up that it does not pay, it continues to develop. The demand for flowers is constantly growing and the laws of demand and supply are inexorable. The daily press devotes more attention to it than to any other branch and this has a great deal to do with its development. That advertisement acts also as a corrective, inasmuch as it attracts to the trade people with capital seeking investment where there is a certain profit. No one flower has been boomed more in recent years in the daily press than the violet. The ease with which it can be grown and the attractive profits resulting from its culture have been alluringly set forth by writers in the daily press who never grew a violet and knew nothing about the subject. The result has been that many people, particularly women with a penchant for flower growing and a desire to earn "pin money," have gone into the business by the hundreds. Their usual method—following the directions of the daily newspaper horticultural teacher—is to procure sashes and a few hundred plants.

The certain result is failure, for they cannot compete with the professional grower who is well equipped with knowledge and has an establishment suited to the purpose. The almost unvarying result is failure for these enthusiastic tyros; but they are a disturbing element to the trade. They produce some flowers of a low grade, which come in at a time when the crop is most plentiful. They also disturb the equanimity of the professional grower by their eager appeals for advice. They disturb the seedsman and general florist in the same way, but they do not disturb the equanimity of the daily newspaper, for that institution and the young man or young woman who wrote the articles which were the cause of all the turmoil are too busy following up the political fortunes of rival politicians, interviewing actresses and society leaders, dilating on the fluctuations of copper or "nipper" stock, exploiting the careers of aspiring pugilists, revelling in the mire of the latest scandal, picturing the horrors of the freshest murder, reporting horse shows and horse races, thrilling the dear public with prognostications of impending wars, and so the florist is left to reap the troubled aftermath while the newspaper goes on to fresher fields.

The business end of horticulture represented by the shopkeeper in the large cities is a branch unto itself. It's connection with the producing branches is a very slender one and seems to be growing more attenuated. Why this should be does not appear on the surface to most of us. The fact remains, however, that as a class they hold aloof from the trade organizations, when it would seem that their interests would be conserved by affiliating with them. The combination of all branches of trade horticulturists in one organization should inure to the benefit of all. The smaller cities are generally represented in the shopkeeping by the man who is himself a grower and whose wife or daughters "tend store" and make up floral designs. The great shopkeepers in the large cities are "artists" and indulge in fads. They, in some cases, drop their first names, like the ladies tailors and milliners. But the development of that branch has been wonderful. Glass delivery wagons, with gold mounted harness and something suspiciously like a crest embossed thereon, have become the sign manual of the successful floral artist in the large cities. The addition of "ribbons and laces to set off the faces" of pretty flowers seems a natural accompaniment to the style of business; but it seems inconsistent with the prevailing "natural" style of flower arrangement. It is positively painful to see flowering plants swathed in ribbons and paper or tied up with bow knots like a poodle dog,



THE ESTABLISHMENT OF THE HASKELL AVENUE FLORAL COMPANY, DALLAS, TEX.

and it is to be hoped the "artists" will abandon it or their patrons get tired of it very soon.

In horticulture as in everything else the men who originate either methods or varieties are the men who shape the business, ends and all. The men who hybridize, the men who investigate, the men who do the thinking, are the men who supply the motive power for the whole. The originators of the new varieties of fruits, flowers and vegetables have not only conferred a benefit on the people at large but have made it possible for the grower to continue in a profitable business. The man who first propagated roses in summer and began a special business of mailing them showed the way to dozens of successful imitators. The man who developed the idea of the shallow bench and annual planting of roses for cut flowers was in his way a Columbus. The man who first used large glass and light frames in greenhouses made it possible to produce the quality of flowers in evidence today. The man who built big greenhouses to grow lettuce, tomatoes, cucumbers, and so forth, made a great forward stride. The men who started the first trade journal made an important innovation.

The business ends of horticulture are many and various and I trust enough has been said about them in this paper to show to those who may not have considered the matters covered, that they are interesting and important, at least to those engaged in them.

Cypripedium Blooms from England.

On January 22 we received three cypripedium blooms by mail, from Alfred Dimmock, the American representative of F. Sander & Co. The flowers were mailed at the home address of the firm. St. Albans, Eng., January 9, and arrived in perfect condition, as may be imagined from the illustration of C. exul × Lathamianum herewith, reproduced from a photograph taken the day of arrival. The other two flowers, C. Calypso, Oakwood variety, and C. Leeanum delicatum, arrived in equally good condition. The base of the stem, in each case, was placed in a little damp sphagnum and wrapped in thin rubber securely tied with raffia. The flowers were then placed in an extra strong cardboard box, the vacant spaces being securely filled with small pieces and wads of dry tissue paper.

WITH THE GROWERS.

HASKELL AVENUE FLORAL CO., DALLAS.

There are in Texas no more progressive nor up-to-date establishments than the Haskell Avenue Floral Company. In fact, it would be difficult to find a more enterprising business house in any northern city, although the south is not usually credited with push and energy equal to that characteristic of the northern craftsmen.

The business was started about five years ago, as the Texas Seed and Floral Co., but recently the greenhouse end was divorced from the retail store and seed business. Its proprietor is Seth Miller, one of the solid business men of Dallas, and the superintendent is F. W. Beach, formerly of Richmond, Ind.

Within the past year the glass area was doubled and a new range of six large houses is planned for the approaching spring. At present there are twelve houses with an area of 35,000 square feet and the new addition will bring this up to 54,000 feet. They also have 5,000 feet of storage frames, in which there are at present dormant 2-inch roses, 200,000 of which will be planted out in the spring.

At present about 15,000 feet of glass is devoted to cut flowers, carnations, roses and violets principally, with smilax and some other specialties. The rest of the place is used for roses and plants, of which large quantities are needed for an extensive catalogue and mail trade. The packing shed, 22x132, is one of the features of the place, being equipped with every known device to facilitate packing and routing the shipments.

The plant is heated by three hot water boilers and one of the features of the construction is that the posts, bench legs and all wood which comes in contact with the soil is bodock, which never rots. The posts are set in cement. A water works system is being put in to irrigate the ten-acre field on which much stock is grown in summer. There will be a standpipe fifteen feet in diameter and sixty feet high. Three-inch pipes will lead to all parts of the grounds and a gasoline engine will pump the water from a deep well to the standpipe.

L. L. MAY & CO., ST. PAUL, MINN.

Under the superintendence of Frank Gustafson everything in and about the L. L. May & Company greenhouse premises at St. Paul is flourishing in a marked degree. In the line of roses they grow Liberty, Golden Gate, Bridesmaid, Bride and a few Lady Dorothea. Liberty is as profitable as Meteor, though not quite so prolific a bloomer. All the flowers are salable, there being no "bull heads," as is common with the Meteor. As an all around variety Golden Gate is the most profitable, it being always in bloom and commanding a fair price in the market. Dorothea is becoming quite popular and it is predicted here that it will be a general favorite when its good qualities become more widely known. Nearly all rose stock is grafted on Manetti. This not only produces stronger plants and better bloom but it is perfectly free from club root, with which own root stock has been troubled in the past.

The carnations are this season certainly the finest ever grown on the place. Mrs. Lawson, though planted late, is now throwing up numerous long, stiff stems and producing blooms which average three to four inches in diameter. In red Crane and America are grown, the former being the favorite. Bradt and its red sport are both doing remarkably well. In pink there is quite a number of sorts, the favorites being Marquis, Mrs. Joost, Melba and Triumph. White Cloud is the standard white, with Flora Hill a good second. Armazindy does remarkably well here.

A large stock of choice Boston ferns, Adiantum cuneatum, A. Capillus-Veneris, A. imbricatum and other good varieties is on hand, as well as a fine lot of Asparagus plumosus nanus and A. Sprengeri. They are potting off a lot of seedling ferns for fern dishes, there being about 12,000 in the lot. The spores for these came from Germany and proved to be an exceptionally good lot.

In bulbous stock this firm annually

forces from 30,000 to 50,000 Romans, 15,000 Paper Whites, 50,000 lily of the valley, 20,000 daffodils, 15,000 tulips, 5,000 to 10,000 Dutch hyacinths, and 10,000 Harrisii and longiflorums. They also grow large quantities of bedding stock and now have 20,000 geraniums potted up, besides thousands of other plants. They handle from 50,000 to 75,000 pansy plants each season.

Almost the entire output of this establishment is sold at retail, the firm doing, in addition to a large city trade, a large shipping business in the northwest.

FELIX.

The American Carnation Society.

We are in receipt of the announcement and schedule of premiums for the eleventh annual meeting of the American Carnation Society, to be held at Indianapolis, February 19 and 20. The meeting will take place at the German House. Copies of the schedule and full particulars may be had from the secretary, A. M. Herr, Lancaster, Pa.

It is announced that this year, for the first time, the society will have vases of its own, sufficient to provide for all exhibitors. Papers will be read by C. W. Ward, Queens, N. Y.; Wallace R. Pierson, Cromwell, Conn., and E. G. Gillett, Cincinnati, O. The question of incorporating the society, and of revising the by-laws will be considered.

The premiums offered are very liberal. There are eight first prizes of $12 and second prizes of $6 offered for vases of 100 blooms, and similar prizes of $6 and $3 for vases of fifty blooms. Eight first prizes of $3, and second prizes of $1.50 are offered for vases of twenty-five blooms, introductions of 1901, we take it, although the specifications are not as definite as might be wished. Special premiums are offered for Prosperity, Dorothy and Ethel Crocker varieties, and $50 divided into two premiums, for fifty blooms of any variety not yet in commerce. Various cups and vases are offered, among which is noted a cup valued at $25 for twenty vases of not more than twenty-five blooms each. A requirement of ten vases in this class would seem better, both in view of the value of the trophy, and of the fact that few growers can stage twenty varieties. The Lawson gold, silver and bronze medals for 100 blooms, one variety, are offered again, and the S. A. F. silver and bronze medals are offered for unintrodnced seedlings. There is no specified number of blooms required in competition for the S. A. F. medals. A definite, reasonable number should be required, as the judges may be in a quandary if it becomes necessary to pass upon one superlative bloom in competition with a vase of twenty-five not quite so good.

A reduced rate of a fare and one-third on the certificate plan has been obtained and a large attendance is assured.

A New Forcing Rose.

Soupert & Notting, of Luxembourg, Europe, will introduce a new forcing rose this spring, over which they are most enthusiastic. It is a cross between Marechal Niel and Maman Cochet, made in 1894, and flowering for the first time in the spring of 1895. The variety has been given the name of Souvenir de Pierre Notting, and the character of the plant is shown in the accompany illustrations.

The habit of growth is strong and erect, but not climbing; the foliage is dark green, and the buds are long and pointed, the flower being very large and carried on fine stiff stems. It is stated to be an excellent keeper, and the open flowers are full centered. The color is deep, warm yellow, the center of the bloom tinged with a deeper, brilliant shade. The plants are very free flowering and the bloom sweet-scented. As a forcing rose the originators claim it to have its greatest merit. They have tried all manner of forcing tests in their greenhouses, and have every confidence that it will do well under ordinary, everyday greenhouse cultural conditions. One of its good qualities is that it is resistant to mildew and is never affected with this complaint, even when other varieties in the same house are covered with it.

In the larger one of the accompanying illustrations, plants are shown which were grated in November and flowered in the following February. In the other picture there is a group of thirty plants bearing more than 300 long-stemmed blooms. These are year-old plants, having been started to force in February and being in full bloom at Easter.

A GROUP OF PLANTS OF THE NEW ROSE, SOUVENIR DE PIERRE NOTTING.

Commercial Cultivation of the Carnation.

[*Read by George S. Osborn, before the Hartford Florists' Club, Hartford, Conn., January 28, 1902.*]

It is not my intention to go into the history of the divine flower, but to at once give you an experience not gained from reading works on the subject or by hearsay, but by actual observation and hard personal labor.

You may find here some radical methods and perhaps, to your minds, useless work, but during the past few years there have been agencies at work which have compelled us to adopt new methods in order to arrive at the desired results. I have no doubt that older and more experienced growers than myself will differ with me, but my views have been asked and the truth must be told and if discussion follows, as I sincerely hope it will, I shall endeavor to defend my points, which I think I can successfully.

Beginning with propagation, let it be said right here that all cuttings should be rooted in the establishment where they are to be grown. This is especially true of new varieties, they having in many cases to be grown a thousand or more miles from their native place and consequently have to get acclimated.

Now the sooner this is done the better, and I believe that a cutting taken from a healthy plant, placed immediately in damp moss and shipped to its destination is far better able to stand the journey and will arrive in as good condition if not better than one which has been in the cutting bench, where the temperature is often much too high. Even admitting that it has been properly rooted, it does the roots no good, and often harm, to be rolled in moss and subjected to rough handling.

Now as to getting acclimated, I claim from the moment the cutting is put in the cutting bench it begins to adapt itself to the change of water, air and other minor influences which are to bear upon its future life.

With cuttings from healthy plants at hand they should be properly trimmed and inserted in the cutting bench, which should have a brick or slate bottom covered to a depth of three inches with clean sand thoroughly packed. Heating pipes should be arranged to give bottom heat, also means provided to control it. After inserting the cuttings water thoroughly and examine each day, sprinkling as occasion requires. Propagation should be done in a shaded house designed for that purpose, for here can be maintained the proper temperature, 55°, with sand 5° or 6° higher, while in a growing house the risk of fluctuation in temperature, strong draughts and different degrees of light make the chances very poor of attaining the ideal.

When the roots are three-eights to one-half inch in length immediately pot in 2-

inch, stand in same temperature and shade until well established, when remove to full sun, either in a house devoted to carnations or one kept a few degrees lower. The potting of each cutting, while entailing extra work, will be found a profitable investment, for when lifted from the field the ball in most cases will be found intact and is a great help in getting the plants established after housing. It is preferable when the roots have filled the 2-inch pots to plant in flats or bench, from which they can be taken at planting-out time without injuring the ball.

Assuming that the soil in the field is in the proper mechanical condition and contains the proper food for carnation growth, the plot should be laid out in what may be called long beds. This is done by digging shallow paths every six or eight feet across the lot, throwing the soil up either way. These paths may run both ways of the lot or only one.

The chief advantage of this bed system is that in very wet weather the paths, if arranged according to the aspect of the land, will serve as conductors of surplus water and also can be put to advantage in a dry season to maintain a system of irrigation. Artificial watering, however, is not to be advised except in extreme cases. Thorough stirring of the soil around the plants after each rain will keep the plants moving.

From planting out to housing, continual attention and systematic cultivation should be carried on. No rule can be laid down governing the topping or cutting back of plants; each variety must be studied as to its habit of growth. A few illustrations may be in order. The variety Mrs G. M. Bradt is one of the most difficult to grow into shapely plants, while Mrs. Joost, Lawson and Marquis naturally take on a shapely habit. Daybreak, White Cloud and others of the sprawly habit need close watching.

Some growers advocate a sandy soil, claiming the water passes off quickly when watering, but soil capable of retaining moisture is best, as explained later under house culture; consequently the soil should contain a small percentage of clay. The soil should be prepared some time in advance, leaving the bone meal out until placed in the benches. This getting in soil to-day and planting tomorrow is all wrong; it is better gotten in two or three weeks in advance in order that it may become settled by watering. A crop or two of weeds may also be destroyed.

In using bone meal, get the best you can; it is none too good. One half the bone meal offered for sale should, like patent medicines, be thrown into the sea, where it would do the most good.

When it comes to housing, shade the houses on the inside by applying a mixture of whiting and water, either by brush or syringe; this daubing the outside with thin mud is not in keeping with recent improvements. Housing should begin as near July 20 as possible and be completed by August 15. This gives the plants time to become well established by September 1, and it is during this month that we are quite sure of having good growing weather inside. October will likely be a still better month and it behooves us to make the most of this sixty days to get the plants in the best possible condition to stand the strain of winter work, for poor plants in the benches November 1 means an unpaid board bill.

In planting carnations in the bench the order must be "Come, boys," not "go, boys." Dig a hole in the soil about six inches in diameter and two to three inches deep, forming a small hill rising in the center of the hole to within an inch of the soil level. On this hill arrange the roots, letting them fall naturally in all directions; scatter a small handful of soil among the roots, shake the plant slightly, draw in the remaining soil and pack down firmly, leaving the plant about one-half inch higher than it stood in the field.

GRAFTED PLANTS OF ROSE SOUVENIR DE PIERRE NOTTING.

As soon as the plants are set water thoroughly, seeing to it that every part of the bench is wet. Syringe overhead several times daily until it is seen that the root action has commenced, when the shading can gradually be removed, commencing on the glass admitting the first and last rays of the sun during the day. With plants well established give full sun and all the ventilation possible without letting the temperature go below 50° at night. About November 1 a little heat should be turned into the houses, for it is better with the thermometer at 40° outside to have heat on and ventilators open than no heat on and ventilators closed.

In order to understand watering carnations one must study the structure and general make up of the whole plant. Some authorities tell us that the carnation is a surface feeder, but I believe this is more due to conditions than to natural habit. Insufficient or untimely watering, too shallow benches and unsuitable soil tend to make the plant a surface feeder. Six inches of soil is none too much and it should be of such nature that water will penetrate every part quickly without an unnecessary volume passing through, as this carries out in solution valuable elements which should be held in readiness for the needs of the plants. It will be clearly seen that when the soil is wet to a depth of only one or two inches, leaving the lower part on the dry side, the roots will seek the surface, while if the moisture were where it should be, this would not be the case.

The bloom on the leaves and stems is taken on for the purpose of resisting disease and should in no case be removed by syringing or otherwise, but on bright mornings the plants are benefited greatly by a gentle shower all over them, opinions to the contrary notwithstanding.

The average temperature for carnations at night is 55°, some requiring 2° to 3° higher, others 2° to 5° lower. On bright days let the houses run up to 70° while on cloudy ones 60° is sufficient.

Insect pests are the result of shiftlessness and no amount of excuses offered can place the blame elsewhere, especially in these days when we have at hand so many preventatives.

Many of the diseases peculiar to the

carnation are caused primarily by the leaves being punctured by aphides or other insects, leaving the door open for disease to enter. Stem rot is classed as a fungous growth and can be, in a great measure, prevented by using carbonate of copper and ammonia solution in the cutting bench, also by spraying the plants after housing.

In the case of a variety known to be subject to stem rot it is advisable, after housing and watering for the first time, to make a shallow trench between the rows of plants and water in this until vigorous growth commences. Rust is a constitutional disease which seems to crop out in the finest varieties. It is best treated by picking off affected leaves and keeping the plants in a high state of cultivation.

To me the fact that a variety is liable to rust is evidence of blue blood, so prevalent does it seem among our finest sorts. This brings us to the point of harvesting and disposing of the finished product, a subject which can only be treated in a separate paper.

Gloxinia Crassilolia Grandiflora.

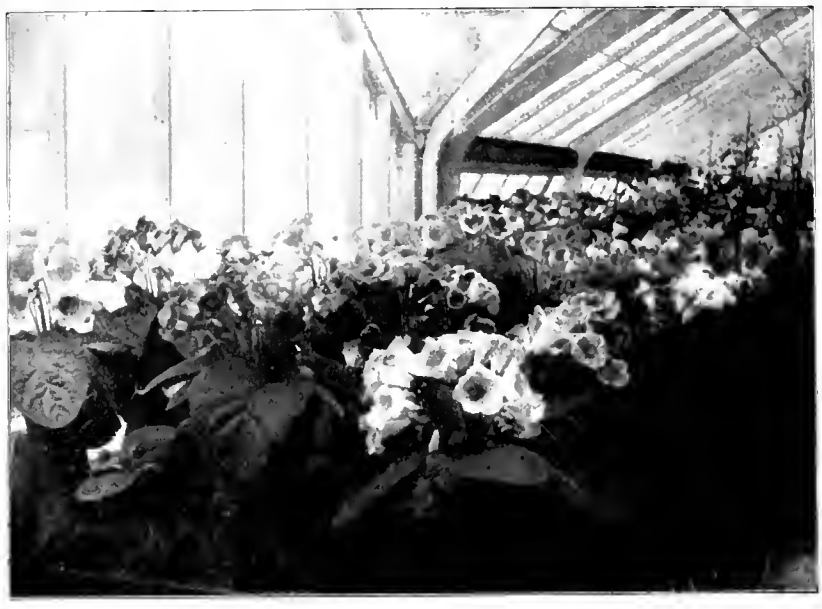
Now that the best season for growing gloxinias is at hand, both from seed and bulbs, it way be well to mention the improvement found in the bulbs offered by the seedsmen. From 100 bulbs purchased January, '01, the photograph herewith reproduced was taken in June. The excellent colors and general heathfulness attest to the care with which these bulbs are prepared for the market, all of which helps to insure the more profitable returns to the intending grower.

Gloxinia bulbs should be potted into small pots as soon as received, in a compost of two parts soil, one part leaf soil and peat, and one part sand, with a little finely chopped sphagnum moss and finely broken charcoal mixed through. Place them in a shaded position in a moist, warm greenhouse and water sparingly. As soon as sufficiently rooted pot into 5-inch and 6-inch pots, which will be their flowering pots, in the same compost, with the addition of a portion of well dried cow manure or poudrette.

The requisite condition from this time is a warm, moist atmosphere, a light shading, avoidance of wetting the foliage and cold draughts. Elevation on inverted flower pots is frequently necessary, as their large, handsome foliage sometimes covers the pots and would be otherwise injured. FRANCIS CANNING.

Trade Statistics.

We are in receipt of the preliminary statistics (official) of the area and value of land, buildings, implements and live stock, June 1, 1900, and the products and leading expenditures in 1899 of the establishments making commercial floriculture their principal business. The total number given for the United States is 6,159; with buildings, 6,159; total area, 42,647 acres; improved area, 34,692 acres; value of land and buildings, $50,619,866; value of buildings, $22,654,756; value of implements, $1,367,087; value of live stock, $396,548; value of products, $18,387,420; value of products fed, $83,359; expended in 1899 for fertilizers, $318,298; expended in 1899 for labor, $4,125,799. Establishments in the various sections of the country are reported as follows: North Atlantic States, 3,237; South Atlantic, 318; North Central, 1,971; South Central, 274; Western, 359.



HOUSE OF GLOXINIAS GROWN BY FRANCIS CANNING, VILLA NOVA, PA.

Similar statistics are at hand with regard to the farms making the sale of trees, shrubs and other nursery stock the principal source of income. The total reported for the United States is 2,022; with buildings, 2,010; total area, 165,374 acres; improved area, 137,188 acres; value of land and buildings, $18,075,050; value of buildings, $4 233,833; value of implements, $539,109; value of live stock, $459,307; value of products, $10 022,195; value of products fed, $192,799; expended in 1899 for fertilizers, $139,582; expended in 1899 for labor, $2,287,940. The farms reported are distributed as follows: North Atlantic States, 496; South Atlantic, 169; North Central, 836; South Central, 280; Western, 241.

From the foregoing figures it appears to us that a great many florists and nurserymen failed to report.

CARNATIONS.

KEEPING QUALITIES IN CARNATIONS.

Keeping quality depends largely upon the variety grown and upon selecting such as are good shippers, but there is still room for a great deal of experimenting to ascertain the treatment blooms should be given before shipping. Some varieties should be cut before they are fully developed and others should remain upon the plant until they are fully opened. In order to know just when these varieties should be picked it is necessary to make a test of the different varieties by picking one or two blooms of each and, placing them in a jar together, note their keeping qualities.

This will give an idea as to the keeping quality of the carnation, but not as to their shipping quality. We find, upon making shipments of long distance, say, from Chicago to Texas, that blooms should stand in water at least twenty-four hours before the shipment is made. We have tried this time and again by making a shipment of half the blooms that have stood in water twelve hours and the other half twenty-four hours, packing them in the same box, then having our customer report to us the condition they arrived in. We have not only tried this once, but with several shipments to the same customer, in different parts of the United States, and invariably those that had stood in water for twenty-four hours reached their destination in good condition, whereas those that had stood in water but twelve hours in many cases had gone to sleep in transit.

The same care should be taken in shipping blooms to wholesale commission houses, for, if we expect our commission men to do well for us, we must co-operate with them and send stock that will ship well, otherwise we are the losers. As we are doing a general shipping business, we always aim to keep a day's cut ahead. In that way we are able to fill telegraph orders with blooms that we know will keep. It is also essential to have a good cooling room. If blooms are allowed to stand in a room that is connected with the boiler house in any way, there is always a certain amount of gases that will affect the keeping qualities.

We have come to the conclusion a cooling room should adjoin the packing room, being on the same floor level, as it is much better than a cellar. We have built our cooling room the same as a refrigerator box, having three dead air spaces, a cement floor and an air shaft through the roof. It is so arranged that we can let in fresh air at the bottom, thus creating a circulation of fresh air at all times. This room should be kept perfectly dry, not allowing any water to be spilled on the floor or tables.

The temperature at which carnations are grown must also be taken into consideration, for if they are forced, as many are, two or three weeks before Christmas in order to secure a full cut for that date, the advanced price they bring does not compensate for damage done to the plants. The plants having been forced into full bloom for the holiday trade continue to bloom, and this forces upon the market a lot of weak stock that will neither keep nor ship. What can we expect from stock that is grown at too high a temperature and also pickled?

There are a number of varieties that are free bloomers, but will not ship well. These should be discarded by wholesale growers. Our business relations are becoming more widely extended each year, and with the increased demand for blooms also comes an increased demand

for new and better varieties. In order to meet competition the florists cannot give the matter of selecting new varieties, and such as are good shippers, too careful and thoughtful consideration, for in the excellence of product lies their success, which will be measured only by their ability to supply the choicest blooms and cuttings obtainable. J. D. THOMPSON.

DETAILS OF SEASONABLE TREATMENT.

If a grower intends exhibiting at the Indianapolis meeting of the American Carnation Society he will want to get his stock into good shape, to produce exhibition flowers, and he will find it a paying investment to get the flowers for sale into what might be called the exhibition class. Such flowers never find a glutted market and can always be sold at fair prices.

If the flowers are not bringing the prices they should it will pay the grower to visit Indianapolis and see what exhibition flowers are like and at the same time rub shoulders with the men who grow them With all our advance and boasted ability as carnation growers we have much to learn and this annual meeting of the American Carnation Society, with the object lesson of the exhibition which is part of the meeting, should be missed by no grower who can possibly arrange his affairs to take the few days required for attending it.

Exhibition flowers are more than the product of the plant; they are the result of brains and good management on the part of the grower. They are produced by a careful study of the needs of each variety in order that it may attain its fullest development, and then supplying these needs.

Most varieties from this date on will stand considerable feeding, but care must be used to see that each variety gets what it needs, no more, no less, for there is quite as much loss to carnation growers each season from overfeeding as there is from too little stimulation, and, rather than make a mistake, apply the extra nourishment in small doses and oftener, as this will enable the grower to watch results and increase or diminish the quantity as the plants may require.

This advice is especially applicable in the use of phosphates or chemical preparations, these giving the quickest and best results if properly used and producing the greatest injury if carelessly applied. No set rules can be given or used on account of the great variety of soils in which carnations are grown. A pint of some special fertilizer applied to a square yard of bench surface may produce the best results in one soil, may not be enough for another and too much for a third. Each grower will therefore have to experiment until he finds what is best for him to use.

Aside from the feeding there are a hundred and one little things that will help bring exhibition flowers. Keeping the benches free from weeds so that the air can circulate around the base of the plants and cutting an occasional branch away from the bottom to still further aid this circulation and allow some light to get to the soil on the bench is often a matter of wisdom, and especially so at this season of the year, when the plants are beginning to crowd themselves on the benches and if allowed to go unchecked will wear themselves out early in the the spring, in which case the quality of flowers produced will steadily deteriorate.

Keeping the plants neatly tied up is an adjunct to good culture and good flowers, but be careful not to pull them together so that they are crowded, as with the advent of brighter days one will have to do some syringing and if the plant is pulled together tightly the water will remain in the center and gradually soften the growth of the plant and start all manner of diseases.

Disbudding, always an important part of good culture, will also require more attention as the sun comes, for side buds should be carefully picked off once a week. Care in watering must be used to see that the plants do not get enough to soften them, causing the production of weak stems, and yet not be dry enough to produce short stems and small flowers.

As the days grow longer the air requires more attention and we unfortunates who cannot afford automatic ventilation need to give considerable time and attention to this end of carnation culture. The carnation is not quite so susceptible to a cold draught as is the rose and does not show evil effects nearly so quickly, but it is injured none the less and on a bitter cold day or when the wind is very high it is better to have the house a trifle hot than to throw the ventilators wide open and let draughts of cold air fall on the plants. All days, however, when the outside temperature is 40° or over, abundant ventilation should be given so that the plants do not get into that condition sometimes seen where a bright sunny day will cause the plants to wilt and hang their heads from the rapid absorption of water.

A careful attention to these details will bring flowers up to their fullest development and make them worthy a place on the exhibition table and put them with the extra select on the market, a grade that knows no gluts nor ruinous prices.

ALBERT M. HERR.

CARNATION GOVERNOR WOLCOTT.

Owing to numerous inquiries regarding the Gov. Wolcott carnation, I think it only fair and my duty toward the trade in general to answer those questions through the trade papers, so that all desirous of purchasing stock may know the true character of this variety.

Gov. Wolcott is a white seedling of 1899, from Flora Hill and Lawson, producing blooms of fine form and substance, with a uniform average of three inches in diameter, on long, stiff, wiry stems, two to three feet in length. The habit of the plant is almost ideal, healthy and vigorous, and like the Lawson, its pollen parent, it keeps throwing a succession of new shoots from its base.

Its season of blooming is later than Flora Hill and much earlier than White Cloud or Lorna, coming into bloom early in November and continuing to give a succession of grand, attractive flowers all through the season. It is a productive, fancy commercial white, a splendid keeper and shipper. A vase of 100 blooms was certificated by the Massachusetts Horticultural Society at the November exhibition.

But like most carnations it has its faults. It splits some during the short dark days of winter, but in very small proportion. It is a month late in coming into bloom to make an all-season variety, but is worthy of a fair trial by all. PETER FISHER.

CHARITON, IA.—I. C. Hon, manager of the Creston Greenhouses, has opened a cut flower store here, with Miss Mildred Kunath in charge. Trade starts off briskly.

Pennsylvania Horticultural Society.

At the January meeting at Horticultural Hall, Philadelphia, the report of the committee on establishing premiums was read and adopted. The committee still maintains the same conservative policy, as few alterations have been made from the old schedule. Additional special prizes and renewals of former ones, however, add much interest for the intending exhibitor and form an important part of the prize list. A recommendation from the executive council that the office of biologist be created was adopted and Dr. Ida M. Keller was elected to the position, Prof. Stewardson Brown being elected as professor of botany. The report of the treasurer, Sidney W Keith, gave the receipts for the year as $2594 55. The roll of the society shows 601 annual and 242 life members. A set of resolutions was also adopted by the society lamenting the death of the late Thomas Meehan and the loss sustained by science and horticulture.

The exhibits of the evening were numerous, the prize list bringing out strong competition. Other exhibits included the new mignonette, Marvelous, from H. F. Michell, with stems about two feet long, the spikes at least one foot long and nearly two inches in diameter. It was pronounced the best ever shown before the society and was awarded the silver medal. Carnations from George Robertson in fifteen varieties, one vase of each of the best standard sorts, were also declared to be the best ever shown by a private gardener and were awarded a cultural certificate. Greenhouse vegetables and mushrooms from John McCleary received honorable mention.

The Samuel T. Bodine prizes for the best plant of flowering begonia went to Ernest Schreiber, gardener to Wm. L. Elkins, Ogontz, and John Thatcher, gardener to Edward Le Boutellier, Wynnewood, both showing splendid specimens of Gloire de Lorraine.

The premium for the best pair of Primula Sinensis went to John Thatcher, with Wm. Robertson second.

The Henry F. Michell prize for best fifty single and fifty double violets went to Geo. Robertson, with Robert Forrest second.

Special mention was given to Wm. Fowler, gardener to Mrs. Chas. Wheeler, Bryn Mawr, for specimen cyclamen, to Robert Forrest for Bride and Bridesmaid roses, to Francis Canning for two plants of Peristrophe (Justicia) speciosa, to Ernest Schreiber for Begonia Sandersonii and dwarf double form of Begonia Vernon.

FRANCIS CANNING.

With Indiana Growers.

James Hartshorne, of the Chicago Carnation Co., paid a visit to Indianapolis recently and, being especially interested in carnations, made a tour of all the establishments making the divine flower a special feature. Baur & Smith, Bertermann Bros., M. Braendlein, E. A. Nelson, and H. W. Rieman were visited and then Mr. Hartshorne went to Richmond, accompanied by H. W. Rieman, H. Junge and Mr. and Mrs. John Bertermann, of Indianapolis. E. G. Hill's place was found looking even better than usual. The two large iron-frame houses recently added are certainly the right thing for cut flowers, as the stock growing in them proves.

Of the great variety of stock handled at the Hill establishment, it was roses and carnations that held the interest of the visitors. Among carnations Lorna

and Adonis were easy leaders, closely followed by Gaiety, Mrs. E. A. Nelson and Cressbrook. Roosevelt was the finest crimson. There were also quite a number of Mrs. Lawson that showed up well. Mrs. Lawson, by the way, proves troublesome for some Indiana growers. There are, of course, scores of seedlings.

In roses this place probably has a greater variety than any other establishment in the United States. Among those most interesting to the visitors were Liberty and White Lady. The results obtained with Liberty show that this rose is all right if properly handled. The plants had none of that semi dormant appearance that so many florists complain of at this time of the year. White Lady is certainly a very beautiful rose, one which would sell, and it seems to be a fairly free bloomer.

While Mr. Hartshorne remained in Richmond to see the much talked of carnations at the Grave place, the Indianapolis wing of the party proceeded to New Castle. There they visited the ranges of the South Park Floral Co., Benthey & Co., and Reinberg & Weiland. Of all three establishments it may be said that they are something to be proud of, and that New Castle justly earns its reputation as a rose town.

The South Park people are the only ones who have the advantage of having natural gas for part of their boilers. Their stock consists mainly of American Beauty, but they also have quite a number of houses devoted to tea roses. One house, set aside for experiments, contains a collection of novelties. Among these is a yellow tea rose of French origin which shows all of the characteristics of a first-class forcing variety. This rose, the Messrs. Heller think, will eventually take the place of Perle des Jardins, and probably restore yellow roses to their former popularity. The South Park Company, for the first time, this year are making rose cuttings for sale, and judging by the appearance of their propagating benches, they will make as much of a success of this branch of the business as they have in the cut flower line.

At Benthey & Company's place the heating apparatus soon won the attention of the visitors from the splendid rose stock. This feature of the establishment is certainly up to date in every detail, and even John Bertermann, who is considered an expert in this line, was able to add to his store of knowledge.

Reinberg & Weiland's is the only one of the three places that devotes a part of the glass to carnations. Of these, as well as of roses, all the standard varieties are grown, and the harvest of flowers was heavy at the time we were there.

Another party of Indianapolis florists had planned making this same trip January 26, but the journey was postponed on account of the severe cold wave.

Indianapolis Hotels.

The following are the hotels which the Indianapolis reception committee recommends to those who will attend the approaching convention of the American Carnation Society:

EUROPEAN PLAN.

Lorraine, single, per day	$ .75 to $1.00
" double, per day	1.00 to 1.50
Oneida, per day	.50 to 1.00
Lorette, per day	.50 to 1.00
Denison, per day	1.00 to 3.00

AMERICAN PLAN.

Spencer, per day	$2.00
Circle Park, per day	1.50
Lorette, per day	1.50
English, per day	$2.00 to 2.50
Denison, per day	2.00 to 5.00
Grand, per day	2.00 to 4.00

New York.

TRADE NOT SATISFACTORY. — BUSINESS BELOW THE AVERAGE FOR THE SEASON. ROSES IN OVER SUPPLY AND FANCY CARNATIONS GOING CHEAPLY — VIOLETS STILL IN THE DUMPS.—A VARIETY OF LOCAL NEWS NOTES OF VARYING INTEREST.

The general comment on business this week is rather despondent and it appears to be the opinion of all good judges that trade is much lighter than it should be to maintain its proper average as compared with past seasons. Roses have multiplied, notwithstanding a spell of very wintry weather. All classes are moving slowly except Brides, and of these there are enough for all needs. Carnations lag disappointingly and it is no longer possible to get anything approaching fancy prices for fancy material. In bulbous stock the increase in cut is considerable excepting on Roman hyacinths, which are rapidly shortening up. Freesias are abundant and Von Sion narcissi are also plentiful but of inferior quality as yet. Violets remain as before reported, excellent in quality and unprecedentedly low in price. Of orchids there is an abundance. Cattleyas are very fine as a rule but prices have taken a drop. Sweet peas of the Blanche Ferry variety are being received in fair quantity from a number of growers. Lilacs are also to be had in any reasonable quantity. Altogether the stock in the wholesalers' hands is as good and as varied as anyone could wish and it ought to have a better sale.

The cut flower market will be removed on April 18 from the old location on East Thirty-fourth street to the corner of Sixth avenue and Twenty-sixth street, where it will occupy the entire floor above that occupied by the New York Cut Flower Company.

Dr. Britton urges, in his report on the year's work in the New York Botanical Garden, that a special exploration fund be established. A collection of 8,000 fossil plants has been received from Columbia University.

It now appears that Charlie See, bookkeeper at Siebrecht's, was more seriously hurt in the tunnel disaster than was at first supposed, his spine being injured and two ribs broken.

It is expected that in less than three years the Palisades Park commission will have completed the work of laying a fifteen mile driveway. Chas. W. Leavett, Jr., has charge.

Thos. Young, Sr., who has been in rather feeble health all winter, suffered a stroke of paralysis on Tuesday, January 28. He is 84 years of age.

Miss Emma Henderson, daughter of Alfred Henderson, was married on Wednesday evening, January 29, to Walter B. Cowperthwaite.

John Nichols had one of his show windows on Forty-second street broken by the great explosion in Park avenue last Monday.

The annual ball of the employes of A. Le Moult will be held at Arlington Hall on Friday evening, February 14.

Theodore Lang, captain of the bowling team, is receiving congratulations on the birth of a daughter January 30.

George Tragidis has sold out his store at Ninety-third street and Columbus avenue to Commanderos & Co.

Thos. H. Browning, who has been in business many years on Hudson street, died of dropsy on January 23.

Frank Traendly is receiving congratulations on the birth of a daughter last Sunday.

Charles Hafner, father of Lawrence Hafner, died January 24, aged 88 years.

A. S. Burns, Jr., was married at Woodside on Wednesday, January 29.

Mrs. H. A. Bunyard is ill with appendicitis.

Visitors: S. S. Pennock, Philadelphia; Mr. and Mrs. Fillow, Westport, Conn.; Carl Jurgens, Jr., Newport.

Boston.

NOTICEABLE IMPROVEMENT IN THE TREND OF TRADE.—VIOLET GROWERS THE ONLY SUFFERERS. — ROSES GRADE HIGH. — AUTUMN LINGERS IN THE LAP OF SPRING. —A LECTURE ON INSECTS.—VARIETY OF LOCAL TRADE AND PERSONAL JOTTINGS.

A general improvement is noted in the tone of the cut flower market. Growers and wholesalers all express satisfaction with the situation and if it should continue as it is now until Lent comes in there will be no reasonable cause for complaint on the part of anyone except the violet people, who have been getting the worst end of it right along. The only trouble with the roses coming in at the present time is that they are too uniformly high grade. The medium quality, the kind at from $4 to $6 that constitutes the most acceptable stock of the medium florist, is not to be found in its usual proportions, the percentage of fancy blooms being larger this year than heretofore. Carnations do not bring the figures of last year, but last year was an exceptional one in this respect and the carnation man is undoubtedly receiving his fair share of the dividends. Bulbous material continues to improve as the season advances. Daffodils and tulips will be good from now on. Freesias are beginning to supplant the Roman hyacinths and are exceedingly good this year. An occasional bunch of English primroses is seen in the windows and they are very suggestive of spring. Autumn has not quite left us, however, as chrysanthemums still linger; George Cartwright is cutting several dozen flowers a day of the latter, Merry Christmas and Maud Dean principally.

Dr. L. O. Howard, of Washington, has been delivering a course of lectures before the Lowell Institute. The fifth in the series, on Monday night of last week, treated of "Insects of the Garden and Greenhouse," and it was illustrated by many beautiful lantern slides. The elm leaf beetle, tussock moth, oak borer, gypsy moth and brown-tail moth were described at length and methods suggested for their control.

Patrick O'Mara, of New York, was in town on Saturday. He delivered an address before the Massachusetts Horticultural Society on "The Business End of Horticulture."

W. R. Shelmire, who has been located in South Sudbury, Mass., for some time, has gone to Atlanta, Ga., to take charge of the establishment of the Westview Floral Co.

The Horticultural Club had as one of its guests at the January meeting, J. W. Thompson, superintendent of parks of Watertown, N. Y.

C. B. Weathered was in town in the early part of this week. Other visitors were P. R. Quinlan, Syracuse, and L. B. Craw, New York.

J. A. Pettigrew fell on the ice while curling last Saturday, but luckily escaped with nothing worse than a severe bruising.

Von Sion narcissi in 8-inch pans are

being brought in now in good shape by several growers.

Wm. Love, an old-time rose grower of Dorchester, died on January 15, aged 72 years.

Chicago.

COLD WEATHER AND A QUIET MARKET.—BRISK SHIPPING DEMAND THE ONLY FEATURE.—IMPOSSIBLE TO FILL ALL ORDERS ON ROSES.—PLENTY OF CARNATIONS IN GENERAL.—VIOLETS STILL LAG.—HORTICULTURAL SOCIETY ELECTS OFFICERS.—VARIOUS NOTES OF LOCAL INTEREST.

This has been a rather quiet week around the market, although there has been a fair amount of certain kinds of business. One of the causes for the deserted condition of the cut flower neighborhood has been the pronounced shortage of roses, but the weather has been the greatest factor in keeping buyers away. It has been so cold that little has been doing with the retailers, outside the ordinary run of small decorations and funeral work. Shipping trade has been active and has consumed all the roses available, at values considerably above the usual for the season. Most of the roses grade well, for the dark weather has had little effect as yet on qualities, although it has made itself felt as a factor in reducing the cuts. One grower says that his average on Bride and Bridesmaid roses last week was a fraction of a cent ahead of his average for Christmas week, but Meteors, Golden Gate, Perle and the one or two specialities in the market, have not shared fully in this advance. A brisk demand continues for Beauties, and the not heavy average receipts are promptly cleaned up. Carnations seem to be in crop with most of the big growers and there are adequate quantities in most lines, although some houses report a call for funeral flowers which exceeds the supply of whites. There has ceased to be complaint that carnations do not keep. Violets are still going slow. Bulbous stock is becoming very plentiful, including Harrisii and calla lilies. Tulips are finding a fair market, most of them being used for centerpieces for small dinner parties. There are good supplies of smilax and asparagus, but adiantum is scarce.

We understand that the energetic president of the Chicago Florists' Club, E. F. Winterson, is negotiating for special railroad accommodations for the Chicago and northern and western craftsmen who will attend the Indianapolis carnation meeting and, as the round trip rate from Chicago will be only $6.70, he expects to fill several sleepers, as well as to take the crowd that never sleeps. N. B.—We have it on special authority that the Indians will not be allowed in the sleepers with the white folks, but will be confined in the buffet car till liberated in Indianapolis. The buffet car will run clear through, and will not close at midnight. The sleepers will be left at Indianapolis and those afflicted with that tired feeling can get up later. Return trains leave Indianapolis at 11 p. m., with sleeper open at 9 p. m., so that those who are pressed for time can leave Chicago in the evening of the 18th and be back before business hours on the 20th, thus seeing the show and losing only one day.

At the meeting of the Horticultural Society of Chicago, January 25, the executive committee was instructed to arrange for the annual fall exhibition. Wm. A. Peterson, George Baldwin and E. F. Winterson were elected members. The officers for the ensuing year are as follows: Wm. H. Chadwick, president; Harry G. Selfridge, first vice-president; Edward G. Uihlein, second vice-president; Ernst Weinhoeber, third vice-president; Willis N. Rudd, secretary and treasurer; Edwin A. Kanst, assistant secretary; S. W. Allerton, Ebenezer Buckingham, John J. Glessner, H. N. Higinbotham, Charles N. Hutchinson, Frank O. Lowden, John J. Mitchell, Martin A. Ryerson, Harry G. Selfridge, Wm. E. Kelley, directors; O. P. Bassett, J. C. Vaughan, Edgar Sanders, W. C. Egan, G. L. Grant, P. J. Hauswirth, E. A. Kanst, Wm. A. Peterson, executive committee.

George Reinberg says that the rooted cutting business, although somewhat later this season than usual, promises to be the best on record. Last year the unfavorable growing season enabled him to move more field grown carnation plants in the fall than the total of a heavy cutting business, but he hardly expects equal good fortune this season. Among the novelties to be tried on the Reinberg place next fall will be the Helen Gould-Balduin and the White Golden Gate roses. In addition, all the season's carnation offerings will have a showing here.

Mardi Gras in New Orleans comes February 10 and 11, and the local wholesalers are wondering what they are going to do about it. New Orleans has been short on home-grown stock this season and has been a larger buyer here than in previous years. With the present short crop of roses there will not be much chance to do big business in the south within the next two weeks.

Adam Schillo, the venerable and wealthy lumberman who has supplied millions of feet of lumber and thousands upon thousands of posts for greenhouses in the vicinity of Chicago, died January 26, aged 65 years. The business has been largely in the hands of his sons and will continue uninterruptedly.

It is reported that the takirs have had notice to vacate the streets, the council having passed the ordinance prohibiting stands outside of three feet from the building line. Now the retailers will have a chance to show how their theories will work in practice.

The Kennicott Brothers Company say that never in the history of this market have they known the rose crops to fall off so remarkably, but all their growers report good crops in sight with a few warm, bright days.

It is reported that Welter & Thill, at Evanston, have dissolved partnership, N. K. Welter continuing the business there and Wm. Thill going to the vicinity of St. Louis to start a range of carnation houses.

Admiral Schley's visit to the city added something to the business of the retailers early in the week. Phil. Hauswirth and Walter Kreitling each got some very good orders on the Admiral's account.

John C. Ure, who has been on the sick list since Christmas, was able to be out again January 23. He is much improved in health, though not yet fully recovered.

Frank Garland is again confined to his home by illness and Mrs. Chas. Stewart, of his down-town salesroom, is also ill.

Visitors: John A. Evans, Richmond, Ind.; Walter Bertermann, Indianapolis; J. D. Eisele, Riverton, N. J.

TRADE SLACKS OFF A BIT BUT PRICES ARE WELL MAINTAINED.—NEED OF A GOOD WHITE CARNATION.—ANDERSON SURE OF HIS LILIES.—DEATHS OF THOSE RELATED TO THE TRADE.

Somebody threw the brakes on about the beginning of last week and as a consequence things have been a little draggy although there seems to be no difficulty in moving good stock and there is very little change in prices. Teas are still $12 to $15 per hundred for the specials, while Beauties of the same class command $7 to $8 per dozen. Carnations are in fair demand at from $1.50 to $4 per hundred. Joost is the leading pink. This variety is a successor to that grand old variety, Scott, which in its turn succeeded Grace Wilder, but must now take a back seat and give way to its superior rival. A good, all-around white is wanted. Hill is the best we now have but the stem is too weak for the standard that is now being set up. White Cloud has the stem but it seems too high class for quick everyday selling and looks as if it is destined to stay among the fancies. Isaac Passmore is sending in a fine large white which, if it blooms at all freely, will be likely to cut a figure for a year or two. It is a large, perfect flower, pure white and very fragrant. Bulbous stock is now quite plentiful and in fairly good demand at from $2 per hundred for Romans to $4 for the best lily of the valley. Narcissi and tulips sell for $3. Violets sell for $1 per hundred for the best double and from 25 cents to 50 cents for singles. Good greens are, it seems, always in demand and considering that the retail men rarely get anything for them the prices keep up very well. Perhaps it would be a good idea for the growers to add a few extra roses and carnations to the hundred to make up this sacrifice of the final distributors of their products.

George Anderson wears a serene smile these days which brightens considerably when the lily question is broached. This is born of a confidence that has come with years of success in forcing this great Easter flower. His opinion is that nine-tenths of the various failures are on account of negligence or lack of knowledge on the part of the grower. As to proving this a fact he is not prepared to commit himself and rests with showing his plants, which are grown from the seedsmen's ordinary stock and are generally found to be free from any of the various ills which seem to befall so many growers.

We regret to record the death of James Atkinson, of Edgewater Park, N. J., which occurred January 21. Deceased was an old-time chrysanthemum grower and was quite a factor in this market some ten or twelve years ago. This was when the flowers were sold tied in bunches at a quarter a bunch and many a wagon load he disposed of in their season. Deceased was of a jolly disposition and was well liked by the trade.

John B. Harris, an elder brother of W. K. Harris, died last Monday, of pneumonia. While the deceased had made his home with his brother for a number of years, he was not generally known to the trade, being an invalid and not being able to take an active part in the business. W. K. Harris is improving slowly and is now able to be about the house. He hopes to be out before long. K.

BARRIE, ONT.—F. B. Browne is planning the erection of a range of houses 60x120, using four structures on the Dietsch short-roof patent, each fifteen feet wide.

PROVIDENCE, R. I.—A movement is on foot among progressive members of the Rhode Island Horticultural Society to erect a building which shall serve for all the offices and exhibitions of the society and yield an income sufficient for its maintenance.

THE AMERICAN FLORIST

Subscription, $1.00 a year. To Europe, $2.00. Subscriptions accepted only from those in the trade.

Advertisements on all except cover pages, 10 Cents a Line, Agate; $1.00 per inch. Cash with Order.

No Special Position Guaranteed.

Discounts are allowed, **only on consecutive insertions**, as follows—6 times, 5 per cent; 13 times 10 per cent; 26 times, 20 per cent; 52 times, 30 per cent.

cover space sold only on yearly contract at $1.00 per inch, net, in the case of the two front pages, regular discounts applying only to the back pages.

The Advertising Department of the AMERICAN FLORIST is for Florists, Seedsmen and Nurserymen and dealers in wares pertaining to those lines *only*.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Wednesday to secure insertion in the issue for the following Saturday. Address

AMERICAN FLORIST CO., Chicago.

GERBERA JAMESONI, grown indoors like carnations, will bloom through fall, winter and spring.

THE date at which your subscription expires is shown on the address label on your paper. Our aim is to merit prompt renewal.

COLEUS THYRSOIDEUS, says J. D. Eisele, should be given practically the same treatment as Begonia Gloire de Lorraine to be grown successfully. This plant should not be fumigated when in bloom as the flowers drop from the stems under that operation.

IN wintering chrysanthemums in the open, certain French growers strongly advise leaving the old flowering branches upon the plants, claiming that a much larger number of the plants are saved under this treatment than when the plants are cut down in the fall.

THERE is prospect of war in the camp of the glass makers. One of the factions is said to have grown weary of the policy of the American Window Glass Company of holding the umbrella over the outside concerns and promises to take away the profits if they do not come into the fold.

THE communications of "Penna" and Toronto "East Ender" are unfortunately consigned to the waste-basket for lack of full names and addresses. To insure attention, the full name and address of the writer, not necessarily for publication, should accompany every communication sent to this office.

Houses for Asparagus.

ED. AM. FLORIST:—I have a piece of ground 105x125 which I intend to cover with glass the coming spring, to be entirely devoted to Asparagus plumosus nanus. I should like to be advised through your valuable paper as to the best style of houses for this purpose, also the best method of preparing the beds.

American Carnation Society.

DEPARTMENT OF REGISTRATION.

B. Eldridge, Belvidere, Ill., registers The Eldridge B, a variegated variety; first or back petals are almost yellow, the tips of the same being blended or marked with carmine and the outer petals all distinctly marked with carmine blended with yellow and salmon mixed. It grows a long stiff stem with but little grass.

The Harms' Park Floral Co, Chicago, Ill., registers Millie Gillman, with no description. ALBERT M. HERR, Sec'y.

It Pays Best.

ED. AM. FLORIST:—My advertisement in your paper is paying better than any other paper and better than it ever did before. J. N. PRITCHARD.

Elk Park, N. C.

Corfu, N. Y.—Wm. Scott, six rose houses.

Mansfield, O.—Berno Floral Co., house 18x140.

Cincinnati, O.—Max Rudolph, one house.

Utica, N. Y.—Peter Crowe, nine houses 20x150.

Maywood, Ill.—A. F. Amling, range of 14 000 feet.

West Mentor, O.—Carl Hagenburger, range of carnation houses.

Brighton, Mich.—J. J. Van Leuven, three houses 27x100.

A Preservative of Pipe.

ED. AM. FLORIST:—I am putting in a new hot water heater and the coils will have to go under the benches in a house where there is considerable drip. Is there something with which I can paint the pipes, to keep them from rusting, which will not injure the plants? M. A. M.

A good coat of asphaltum will, if the pipes are now free from rust, last for a long time. It will be much more durable than linseed oil and lamp black, which is for ordinary purposes preferred, as affording a more effective radiating surface than the glossy coating of asphaltum.

L. R. TAFT.

Canna Mrs. Kate Gray.

ED. AM. FLORIST:—I see in my old friend, the AMERICAN FLORIST, of January 11, a note copied from the English *Gardeners' Chronicle* concerning the Canna Mrs. Kate Gray. I hybridized and grew that variety myself, and if any man knows the origin of that variety, I should know it. The cross is Italia, seed bearing parent, with pollen from Madame Crozy. My diary stands thus: "Mr. Hattell and myself tried Italia and Austria; total failure. After three months' constant attemps twice a day, attempts on Austria abandoned. Italia showed several attempts to produce seed but pods all abortive. Constant work as before exclusively on Italia, pod swelling with enough flower to attract the sap; seed sure." Now about this time that little green pod was the idol of the time. Day after day it was worshipped and in my pilgrimages a large cat accompanied me. Now, pussy knew nothing about the seed pod, and a humming bird was busy on the flower spike, puss sprang, bird caught, spike broken, hope gone, but as a last resort the one green seed was planted. Six days after it was through the ground and Mrs. Kate Gray canna was a reality. W. H. MORSE.

Forcing Hydrangeas and Roses.

ED. AM. FLORIST:—When should hardy perpetual roses and hydrangeas be started to bloom for Decoration day and what temperature should be maintained? The hydrangeas are not H paniculata grandiflora, but tender ones.

M. H. W.

Hybrid perpetual roses do not need much forcing in order to bring them in flower by Decoration day and one of the most essential points in the operation is to start them gradually, so that the roots are given an opportunity to move along in harmony with the top growth. A period of ten to twelve weeks is sufficient at that season of the year to produce a good crop of flowers, the plants being started in a night temperature of 45° to 48°, syringed frequently, and the heat gradually increased to 55° to 58°, with plenty of ventilation in bright weather. Hydrangea Otaksa for Decoration day will not require a higher night temperature than 50° to 55° to bring them in on time if placed in heat early in February. The hydrangeas will also need thorough syringing every bright day until the flower heads show color, and also abundant watering, these plants being very thirsty subjects.

W. H. TAPLIN.

Injured Violet Foliage.

ED. AM. FLORIST:—What can the matter be with my violets? The plants were healthy when housed and started away nicely but now the foliage is dying around the edges of each leaf. The margin grows brown and sere and the leaf finally dies. Can it be the tobacco smoke? They seem worse near the sides of the house and I suspect the smoke is stronger there, as it rolls down the glass after rising to the top of the house.

A. S. C.

The violet leaves sent in by "A. S. C." may have been injured by tobacco smoke; violet foliage is very sensitive to tobacco smoke and is often injured by it. Sometimes when the injury is not sufficient to cause the actual death of the leaf, it weakens the leaf so that the fungus causing spot develops with great rapidity and an epidemic of this disease may result. Over-feeding is another cause of the death of the margins of the leaves. The violet is not a rank feeder and must be treated accordingly. I would suggest that the correspondent write the United States Department of Agriculture requesting circular on fumigation of violets with hydrocyanic acid. ALBERT F. WOODS.

Trouble With Ficus.

ED. AM. FLORIST:—I enclose a leaf of a ficus plant which is giving me trouble because it is dying on the hands of one of my customers. The plant was grown out of doors all summer and is about thirty-six inches high. I sold it about two months ago. Since then it has stood on the floor in a parlor, east front, with a Boston fern and a kentia. There is light and air. Gas is burned on the table but not in the chandeliers. The leaves of the rubber are turning yellow and dying, but I do not think it rust or black spot. The soil is sweet and seems all right. Is it possible the plant is kept too wet or too dry? T. H. U. S.

The leaves of Ficus elastica which accompanied the query from "T. H. U. S." have been carefully examined, but no leaf spot fungi were found and the death of the leaf, therefore, must have been caused by some condition of growth. Ficus elastica will not stand over-feeding, and it is possible that the soil in which the plant affected is growing may have been made a little too rich. In winter rubber plants require a comparatively small amount of water. The main cause of yellowing and dropping of the leaves is over-watering during the period of slow growth in cold weather. Rubber plants growing in small pots, especially if in a dwelling room, will take an abundance of water in the summer time, and the same is true of plants set out of

doors, but during the winter the greatest caution is necessary. It is not likely that gas has caused any trouble.

ALBERT F. WOODS.

Diseased Roses.

ED. AM. FLORIST:—Please tell me what the trouble is with my roses, samples of roots, soil, etc., being sent herewith. The roots are knotty and reddish brown in color, and the leaves are dropping while the stem and foliage appear healthy. The plants have not done well at any time this winter. At the start I had considerable trouble with grub worms, which ate the plants almost off on the roots. At present I can see no trouble in the soil, no worms being found by close examination. The plants look healthy, but still the disease shows all over them. Please tell me what the trouble is and how to combat it. A. SUBSCRIBER.

The samples were useless, but judging from the description of the condition of the roots it would appear that they have eel worm, though the foliage does not generally remain of a healthy green color when the roots are affected by eel worm, at least if badly troubled with the pest. There is one part of the subscriber's communication which I fail to understand; it is this: "The plants look healthy but still the disease shows all over them." How plants can look healthy and yet show disease all over them is something new to me, for I have never seen a diseased plant yet that looked healthy. I would suggest that lime water be tried, one peck of fresh lime to about fifty gallons of water. Let the soil be a little on the dry side before applying, then give it a good soaking with the lime water and repeat it every two weeks. Keep the night temperature down to 55° or 56°, give all the air reasonable during the day, syringing overhead on bright days, and if they are not too badly affected with eel worm the above treatment will materially help them.

JOHN N. MAY.

Building and Piping a Rose House.

ED. AM. FLORIST:—I propose to build a rose house 165 feet long, heating it by steam from a fifty horse-power tubular boiler, below the level of the greenhouses, which also heats the rest of my range. What is the best style of house for the purpose, width, height of walls, pitch of roof and length of each span? How should the benches be arranged? Ventilation can be had on the south side if desirable. How much radiation will be required to maintain a temperature of 60° when the outside temperature is 25° below zero, as it is once in a great while? Should the main flow pipe be overhead, and how large? Are a number of 1-inch pipes better for radiation than the same number of square feet in larger pipes? Will check valves on the returns be of any advantage? What is the best and cheapest material for greenhouse purposes in Iowa? A. L. W.

While various forms and widths of houses will answer for growing roses, the three-quarter span with the long slope to the south, and a width of about twenty-five feet seems to be a favorite at the present time. These houses have the south wall about five and one-half feet high, the north wall seven and one-half feet, and the ridge has a height of fifteen feet. Two feet of glass in the south wall is desirable. Where second-hand 2-inch pipe can be secured, it makes cheap posts, and when used with iron gutters will make the walls quite durable. A good grade of cypress should be used for the remainder of the house. The sash bars on the south side should be eighteen feet, and on the north side eleven and one-half feet in length. A house of this width will answer for four benches four feet wide, with five walks from eighteen to twenty-four inches in width. For a house of this length it will be best to use 1¼-inch pipes, and to maintain a temperature of 60° in the coldest weather sixteen will be desirable, of which at least one-half should be valved so that they can be cut off in mild weather. It will be well to have four pipes on each wall and two under each bench. The house will contain nearly 1,200 square feet of radiating surface and will need a 3-inch feed and a 2-inch return pipe. If the boiler is sufficiently low to give a free return of the drip water it will be better not to use an overhead flow-pipe, connecting at once to the coils. Check valves are not needed on the returns, but there should be a good gate valve on the main flow and another on the main return. L. R. TAFT.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of ten cents a line (six words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

Every paid subscriber to the AMERICAN FLORIST for the year 1902 is entitled to a five-line WANT ADV. (situations only) free, to be used at any time during the year.

SITUATION WANTED—As grower of carnations or assistant rose grower. Good references. Address Box 417, Eaton, O.

SITUATION WANTED—By practical florist, thoroughly experienced in general greenhouse work. First-class propagator. Address D D, care American Florist.

SITUATION WANTED—By all-around man to take charge—private place preferred; 20 years' experience in cut flowers and plants. Address R, care American Florist, Chicago.

SITUATION WANTED—By March 1st, by an all-around man, capable of taking charge; 15 years' experience; expert grower of carnations and violets. Good references. Address G R, care American Florist.

SITUATION WANTED—As foreman by a practical grower of roses, carnations, chrysanthemums and other stock; 26 years' experience. Capable of managing a large place. References O. K. FLORIST, 129 N. Clark St., Chicago.

SITUATION WANTED—Young man, 25, experience 10 years, desires commercial place. Good all-around grower, specially experienced in ferns. Best references furnished. Address GROWER, Vaughan's Seed Store, 14 Barclay St., N. Y.

SITUATION WANTED—Before or after the first of March, by a sober, industrious, single man, as assistant in a small commercial place where there is a chance to learn decorating and design work. Have had several years' experience in cut flowers and pot culture branches. Address WM. HERRMANN, Box 162, Kenilworth, Ill.

SITUATION WANTED—As foreman and propagator in commercial place to take full charge. 20 years' experience in European and American nurseries; first-class grower of roses, carnations, chrysanthemums, violets, palms and decorative plants; also forcing of bulbs and flowering plants. Only first-class position wanted. W H, care American Florist.

WANTED AT ONCE—Good all-around greenhouse man. C. H. FREY, 1133 O St., Lincoln, Neb.

WANTED—Young man for general greenhouse work. State wages wanted with board. COLE BROTHERS, Peoria, Ill.

WANTED—Man for general greenhouse work, two helpers for rose sections. J. F. WILCOX, Council Bluffs, Iowa.

WANTED—Young man to learn the greenhouse business of growing roses and carnations. Apply to JOHN L. WYLAND, De Haven, Pa.

WANTED—50 to 100 second-hand cold frames in good condition. Give size, condition and lowest cash price. Address HAMILTON & PLUMMER, Kewanee, Ill.

WANTED—An all-around reliable florist; must grow roses and carnations. Single German preferred. State wages, with board. References. Apply to OTTO BAUMANN, Florist, Manistee, Mich.

WANTED—Single man, one accustomed to bedding and propagating on a large commercial establishment; one who is willing to learn and advance himself. $25.00 per month and board. Address H, care American Florist.

WANTED—An all-around, experienced gardener and florist, for private place. Must be willing to work; of good habits. Single man preferred. References required. Address A. C. LORING, 1013 Guaranty Loan Bldg., Minneapolis, Minn.

WANTED—Agreeable partner with $3,000 to $10,000 or more. Wish to enlarge my plant (a well established trade). If you have the price, write and give full particulars, and I will tell you the rest. Address HUSTLER, care American Florist, Chicago.

WANTED—An A No. 1 man of unquestioned character and ability, for position in retail store; must be a first-class salesman and strictly up-to-date in decorating and designing. Address with references, RETAILER, care American Florist, Chicago.

FOR SALE—5000 feet second hand boiler tubes suitable for heating pipes in greenhouses. KROESCHELL BROS. CO., 45 Erie St., Chicago.

FOR SALE OR RENT—Greenhouses, 4000 sq. feet of glass, ground and dwelling. Good market on electric cars and railroad. Easy terms. Address M T, care American Florist.

FOR SALE—Well established florist business, 12,000 feet of glass, well stocked, steam heat, several acres of ground; no competition; about 100 miles from Chicago. Address INDIANA, care American Florist.

FOR SALE—17,000 feet of glass, nearly new, splendid carnation and rose soil, 15 acres, house and barn, near city of 80,000, 28 miles from Philadelphia. Inquire of LEO. NIESSEN, 13th and Filbert Sts., Phila.

FOR SALE—A bargain. Fine greenhouse property at Atglen, Pa., 47 miles from Philadelphia on main line of Penna. R. R., containing about 8 acres; fine 12-room double dwelling, barn and 6 greenhouses, well stocked with carnations and violets. Price $6000. Address J. B. R. MCCLURE & CO., 18 South 40th St., Philadelphia, Pa.

$300 Per Month.

Do you want it? If so, buy me out NOW, at your own price. Good reasons. 15,000 feet. It costs you a postal card to have particulars.

Cleveland.

A RIVAL FOR THE LAWSON CARNATION.—WILL BE SEEN AT INDIANAPOLIS.—CLUB HOLDS INTERESTING SESSION.—NOTES HERE AND THERE.

The writer recently took a trip to the establishment of George W. Smith, on Wade Park avenue, to pay his respects to the genial proprietor, and incidently to see the famous seedling carnation which is to supersede the Lawson. He found both in the same house. In my humble opinion I do not think the seedling will knock Lawson out. Yet I think it is the nearest approach to the Lawson type of carnation ever produced in Cleveland. It is a cross between Argyle and a seedling the parentage of which was Hill and Tidal Wave. The color is a very pleasing shade of pink, somewhat darker than Marquis. The flowers are three to three and one-half inches in diameter, borne on erect stems. The foliage is of the Hill type and absolutely free from disease. A more healthy grower or better producer would be hard to find. I understand this is the fourth season for it and no deterioration has been noticed. Mr. Smith intends to exhibit it at the forthcoming show at Indianapolis. He is a hustler and a good grower, as the healthy appearance of all his stock testifies. Extensive improvements to the plant are contemplated for the near future. He grows entirely for his own retail trade.

The Florists' Club held its regular meeting last Monday evening, January 27, which was fairly well attended. George Smith was elected to membership. The subject of carnations and the various methods of culture came up for discussion, also the merits and demerits of some of the old and new kinds. S. N. Pentecost gave his experience on indoor culture during summer. While he could not say positively at this season which method paid the best, he is of the opinion that it does not pay to grow carnations indoors in summer, which opinion seemed to be shared by the majority of those present.

The comparatively low price of glass must have been the incentive to put the building bee in the bonnets of the florists around here. Rumors of building greenhouses this coming spring can be heard from all quarters. Carl Hagenburger, of West Mentor, O., has under consideration plans for the erection of a range to be devoted exclusively to the growing of fancy carnations.

Robt. Kegg is so busy with plans for extensive improvements to our park system that he cannot find time to attend the club meetings. ECHO.

SHARON, PA.—Fred Heinz, son of Chas. Heinz, of North Sharon, is erecting a greenhouse 11x75 and will go into business for himself.

THE SEED TRADE.

AMERICAN SEED TRADE ASSOCIATION.

J. E. NORTHRUP, Pres.; S. F. LEONARD, Vice-Pres.; S. F. WILLARD, Wethersfield, Conn., Sec'y and Treas.

Twentieth annual convention, Twin Cities, Minn., June, 1902.

CANE seed appears to be in brisk demand.

VISITED CHICAGO:—A. T. Boddington, New York; A. J. Brown, Grand Rapids, Mich.; A. Haven, South Haven, Mich.; C. H. Coy, Boston.

STURGEON BAY, WIS.—A deal was closed last week whereby a new seed warehouse 40x100 feet, for the Goodwin, Harries Co., is to be constructed.

IT is reported that a prominent Michigan pea grower has sold to a large seed house in the same state a part of his pea seed stock, the consideration being $20,000 cash.

THE sharp frosts of December cut the growing plants of callas and freesias in southern California, but both are now making good growth and probably are not seriously hurt, though the latter may suffer some. More anxiety is felt at present as to the effects of the drought on these two crops. If the rains do not come within two weeks, the conditions will be serious.

WATERLOO, NEB.—C. H. Coy, of Melrose, Mass., son of E. L. Coy, the originator of the Beauty of Hebron potato, has entered the firm of Chauncey P. Coy & Son, which has purchased a tract of land along the Union Pacific tracks at Valley, two and one-half miles west of Waterloo, upon which a cleaning warehouse and picking rooms for seed corn will be built in spring. C. H. Coy will be particularly identified with this establishment, which is to be conducted entirely separate from the Waterloo business.

Santa Clara, Cal.

Articles of incorporation of J. M. Kimberlin & Company were filed in the office of the county clerk, January 14. The board of directors is composed of J. M. Kimberlin, Katherine E. Kimberlin, Imogene T. Roadhouse, O. B. Kimberlin, May V. Rankin, C. R. Kimberlin, L. M. Kimberlin, H. V. Kimberlin and Mary A. Sanders. The capital stock is fixed at $100,000, all of which has been subscribed. J. M. Kimberlin has subscribed 9,430 shares of the par value of $10 each, and Katherine E. Kimberlin has subscribed 500 shares, the other directors subscribing ten shares each.

Mr. and Mrs. J. M. Kimberlin celebrated their golden wedding January 8. J. M. Kimberlin has had a slight stroke of paralysis.

Seed Peas.

A writer in the *Gardeners' Chronicle* in explaining the short crop of this season says: "Early peas for seed are always grown on light land to preserve their precocity, and it was the light lands which suffered so severely from the drought. To sow early peas in heavy land is to throw the stock back in the point of earliness and also to increase the height of the growth. Early peas rapidly deteriorate in regard to these particulars when grown on retarding land." He further says: "Some new peas show a tendency to improve under cultivation, and perhaps more particularly some of the varieties bearing the name Laxton. Gradus is a case in point, and it is found to be showing improvement as a cropping pea—as a seed merchant said the other day: 'Gradus is working up a constitution of its own.' This might be said of all crosses made by Laxton; the main aim has been to produce dark green pods. Whether rightly or wrongly, superior flavor is associated in the minds of many with a deep green pod; and in order to produce the desired color, probably some amount of breeding in-and-in has had to be resorted to to secure this end, hence some constitutional debility. Green podded peas no doubt have the preference in the estimation of the market dealer. Other peas than Gradus are doubtless going through the same course of improvement by cultivation, while some rapidly fall away and are lost."

Washington.

The Henry Phillips Seed and Implement Company has been awarded two supplementary seed contracts since receiving the original. The last contract awarded is for some 10,000 packages of lawn grass seed, which will be filled at the Toledo, Ohio, warehouses of the company.

A large force is employed on the original contract and the work is going along satisfactorily under the direction of B. T. Galloway, chief of the bureau of plant industry. James Morrison has charge of the distribution and, with several assistants, looks after the interests of the government. About 1,300,000 packages, each containing five kinds of seeds, have already been distributed. Samples of all the seeds are tested at the seed laboratory of the department, which is in charge of A. J. Pieters.

The contractors have been relieved of packing cotton, tobacco, forage crops and grass seeds, which are handled by the department force under the bureau of plant industry and distributed with due regard to the requirements of the different states. A pamphlet giving cultural directions is enclosed with each lot of seeds.

Ten machines have been installed by the Brown Bag-Filling Machine Co., of Fitchburg, Mass. All the machinery is operated by electric motors.

Thos. J. Wade, who has retired from the floral business, is now in the employ of the department, having charge of the seed mailing.

W. T. Phillips is superintending the packing for the contractors. G.

Catalogues Received.

Wm. Elliott & Sons, New York, wholesale and retail seeds; Weeber & Don, New York, seeds and plants; Kroeschell Bros. Co., Chicago, boilers; William Swayne, Kennett Square, Pa., plants; Arthur Cowee, Berlin, N. Y., gladioli; W. S. Nichol, Barrington Center, R. THE NURSERY TRADE.

AM. ASSOCIATION OF NURSERYMEN.
R. C. BERCKMANS, Pres.; R. J. COE, Vice-Pres.
GEORGE C. SEAGER, Rochester, N. Y., Sec'y.
Twenty-seventh annual convention, Milwaukee, Wis., June, 1902.

PARRY'S POMONA NURSERIES, Parry, N. J., made an assignment January 10 to Joseph L. Thomas.

AT the forty-seventh annual meeting of the Western New York Horticultural Society, at Rochester, January 22 and 23, the Barry gold medals for new fruits were presented to Chas. G. Hooker and John Charlton & Sons.

ONE result of the agitation on account of the presence of the San Jose scale in the neighborhood of Worcester, Mass., has been the placing of a large supply of whaleoil soap in Horticultural Hall for the use of the public and the appropriation of $1,000 by the Horticultural Society to be used for the purpose of checking the ravages of the pest.

To Improve Rhododendrons.

ED. AM. FLORIST:—Some years ago I transplanted from a nearby swamp a lot of wild rhododendrons, probably R. maximum which have thrived wonderfully. The clumps are so luxuriant that thousands of small seedlings are in sight. If I could only get gorgeous colors they would be a fine sight. Can they be hybridized with the brilliant colored Nepaul species, R. arboreum, or grafted? If so, please to tell me how I should go to work. What kind of wood should be used and what kind of graft? What time of year should it be done. M. T.

In answer to your letter of inquiry about Rhododendron maximum and its improvement by crossing with other species, they can possibly be improved and made as brilliant as the Catawbiense variety, but the process is a slow one and will require years of patient labor, and many failures will come before the end is obtained. There are, I believe, a few hybrids of R. maximum, but not many. Why it has not been used as much as Catawbiense I cannot say, unless that it blooms much later than the other species. Charles Sander, of Prof. Sargent's, has been working on it for several years, but I believe his crosses have not yet bloomed. I have a few three years old, but none has bloomed as yet.

The proper way to go to work about hybridizing would be to pot up some good blooming plants of R. maximum and start them under glass three or four weeks ahead of the other species, so as to have them both in bloom at the same time. Maximum being the one used for the mother plant, should have all the stamens removed as fast as the flowers open and before the pollen opens. It should then be covered with gauze so that it will not be impregnated with any other species than the one desired. If there is no other species or variety near, this would be unnecessary. As soon as the stigma is ready for the pollen, take the pollen of the plant to be used as the pollen parent and cover the stigma by dusting it over with a camel's hair brush or otherwise. Be sure this is done when the air of the house is dry and warm, so as to help scatter the pollen grains. Be sure the pollen does not get wet or the result will be unsatisfactory. Be sure and make a record of the varieties used for future reference.

When the seed is ripe prepare some well drained pans or pots and fill them with light, sandy, peaty soil. Having pressed firmly and watered with a fine rose, sow the seeds on the surface and cover with the slightest possible cover of earth. Over this put sphagnum moss or paper. To keep the soil moist very careful watering is necessary, as the seeds, being so small, are easily displaced. I, myself, usually fill up the pans or boxes as I have described, cover the whole with fine chopped sphagnum, and sow the seeds of this class of plants on the sphagnum. This way requires no covering and they are less liable to damp off than when sown on the surface of the soil. The pots should then be placed in a warm house, 60° to 65°. If everything is all right the plants should appear in a few weeks.

As soon as the first rough leaf appears the young plants should be pricked off in well drained pans or boxes, using the same kind of soil as in the seed pans. As soon as pricked off water with a fine rose to settle the earth around them. Grow them on as rapidly as possible and as the plants begin to touch each other transplant into fresh pans, using a little coarse soil each time. Keep the air of the house they are grown in moist and warm. If they have been properly attended to, by the first of September the plants should be from an inch to one and one-half inches high. Then more air should be given the plants and less moisture. Gradually hardened off, remove them to an open frame or a cool house. Winter the first season in a cool pit or cellar and the following spring plant out in a well prepared bed, where they can be shaded if necessary during extreme weather. A syringing every evening during hot weather this first season will greatly help them. After that ordinary culture will be sufficient.

Rhododendron maximum makes a good stock to graft other rhododendrons on. For grafting the stocks should be potted in spring and plunged outside in beds of soil on coal ashes. This keeps the roots much cooler than if exposed on the surface. The plants can be grafted in close frames in the house from August to September and from December to March. Side or veneer grafts are usually used. The best wood to use is the new, half ripened growth for summer grafting and the same ripened growths for winter. After grafting the plants are laid on their sides in a close frame and kept very close for the first two weeks. After that a little air can be given each day. From six to eight weeks is the time required for the graft to get well knit. As soon as the grafts knit the plants can be set in the body of the house and grown on as other plants. At the approach of cold weather they can be stored in cold pits or cellars until planting time, when they can be planted out and treated the same as the other young plants. Plants with wood about as thick as a lead pencil are best for grafting but somewhat larger can be used. JACKSON DAWSON.

DOVER, DEL.—John Parsons, for many years in charge of the decorative planting on the Delaware division of the Pennsylvania railroad, died January 24, aged 65 years.

NAZARETH, PA.—George R. Geiger is in the midst of a season of prosperity and is planning to increase his facilities for next season by the addition of 7,000 feet of glass to his range.

BRIGHTON, MASS.—W. H. Elliott, the well known rose and asparagus grower, has by far the largest greenhouse in the country well along toward completion. The dimensions are 54x800 feet.

NEW YORK.—Henry W. Gibbons has severed his connection with the firm at Bloomsburg, Pa., which bore his name, and will continue in business on his own account at his old address, 136 Liberty street.

ST. LOUIS, MO.—Charles Connon, an old-time florist of this city, resident of Webster Grove, died January 25 and was buried on the 28th inst. A large delegation, representing the St. Louis Florists' Club attended the funeral.

OUR PASTIMES.

Announcements of coming contests or other events of interest to our bowling, shooting and cycling readers are solicited and will be given place in this column.

Address all correspondence for this department to Wm. J. Stewart, 79 Milk St., Boston, Mass.; Robt. Kift, 1725 Chestnut St., Philadelphia, Pa.; or to the American Florist Co., 324 Dearborn St., Chicago, Ill.

At New York.

Monday evening saw a full dozen enthusiasts on the bowling alleys and no less than eight games were rolled before they had had enough. Scores were varied, some phenomenally big, some phenomenally little, but all who were there had a good time.

At Utica.

The following is the score made by the members of the Utica Florists' Bowling Club on the evening of January 26:

Player	1st	2d	3d	4th	Av
Baker	119	174	155	139	147
Wilcox	116	165	121	137	135
Death	136	116	134	88	119
McGowan	111	94	110	133	112
Williams	91	106	134	111	110
McLane	93	103	108	120	106

S.

Chicago Visits Milwaukee.

A party of eighteen Chicago florists, members of the bowling club and their friends, visited Milwaukee on Saturday evening, January 25, and had a rousing time, as they always do in the Cream City. The bowling was at the Plankinton House and after the smoke of battle had cleared away it was found that the hosts had graciously refrained from piling up too large scores to incommode their guests. Everybody then marched to the annual Brewers' Ball, with music by the "Lauderbach band" playing "There'll be a Hot Time," and there was. Following is the score made on the alleys:

MILWAUKEE.			CHICAGO.		
Pollworth	159	161	Asmus	139	179
Kennedy	131	136	Degnan	178	166
Zweifel	169	128	Hauswirth	189	144

Toronto.

SEVERE WINTER WEATHER MAKES AN IMPRESSION ON TRADE.—SUPPLIES SHORT EXCEPT VIOLETS AND CARNATIONS.—AT THE CLUB.—VARIOUS NOTES

The prevailing cold weather is having its effect on trade, but as this sort of temperature does not produce roses in quantity they are still in demand at top notch prices. Carnations are plentiful and good and bulbous stock is coming in heavily. Asparagus plumosus is the scarce article. Violet day was almost a failure and large quantities were left over. The heaviest snowstorm for twenty-five years raged all day and traffic was suspended. This storm caused considerable damage to the greenhouses in this vicinity. One house at Lampton collapsed and in many others the bars were sprung so much that they had to be propped up.

Installation night at the club brought out the largest attendance we have had for many a day. Our new president, Jno. Chambers, manipulated the gavel with a master hand and business, mostly pertaining to a spring show to be held about Easter, went through with a rush. Walter Muston was presented with a silver water service which, by his well selected words and happy countenance, we knew was appreciated. After the usual routine cards were indulged in and the refreshments under Geo. Mills' direction proved most palatable.

On January 27 Lancelot Dunn, a florist of St. Catharines, died at his home, of pneumonia, after a short illness. Deceased was born in Newcastle-on-Tyne and came to this country in 1861. He was 53 years of age and leaves a wife, two sons and five daughters.

The secretary of the Horticultural Society has sent notices that an informal carnation meeting will be held at Dale's, Brampton, on February 4. Those who intend visiting are requested to bring a few blooms to compare notes.

Jno H. Dunlop has a sport of Lawson carnation, a beautiful shade of pink, a little darker than Morning Glory, with all the growing habits of the parent flower. H. G. D.

Circulation which Circulates

The actual paid circulation of the American Florist is, we believe, the largest in its class. The contents are of real present value and are preserved for reference. Advertisers who use regularly our columns establish permanent business with the best trade in the United States.

Everything For Florists.

TRADE BRISK AND GOOD STOCK CLEANED UP WELL.—NOTES OF VARIOUS MATTERS OF LOCAL INTEREST.

Business at the present writing is all that can be asked. There is a nice lot of stock coming in, meeting a ready demand. Roses sell from $4 to $12 and there are none left after the day's business is over. Fancy carnations seem to be moving a little better this week than last and sell at from $3 to $5. Nice lily of the valley and tulips are also being offered in quantity. Violets are moving a little better than at last report and also Romans and narcissi. Harrisii and calla lilies are coming in more abundantly and sell at sight.

A smooth individual came into the store of A. Sunderbruch's Sons one day last week and passed himself off as Mr. Bates, a well-to-do resident of one of our suburbs. He ordered two dozen roses for $4 and had them sent to the residence of Mr. Bates, tendering a check for $15 in payment for same. Mr. Foster accepted the check and gave $11 in change.

Has carnation rust made its appearance again? The writer has seen a lot of carnations from one of our crack growers which were literally covered with rust. It is the first I have seen for two years.

Hardesty & Company have a grand lot of Harrisii lilies and they seem to be selling well. Mr. Oats of this firm leaves for Lexington this week to look after his other interests.

Julius Baer had a swell window last week, of azaleas and poinsettias, with leucothoe sprays hung about the window in Kift's holders. D.

Providence, R. I.

BUSINESS ON THE UP GRADE.—BULBOUS STOCK IN OVER-SUPPLY.—NOTES HERE AND THERE.

We have come to the turn in the lane, and business is now improving after a slack period of nearly a month. Roses, carnations and violets find ready sale, only bulbous flowers being a glut. Not only has cut flower trade improved but also the demand for design work. The weather has been especially mild and clear.

J. Wood is reported anxious to discontinue his present stand and locate on Westminster street.

Local growers are planning to raise more Joost carnations next season.

G. O. Westcott has been very sick. His friends wish him a quick recovery.

F. Macrae is sending in some good Princess of Wales violets.

Hoffman is first in with tulips.

M. M.

LOOMIS, CAL.—A. Mitting has disposed of his interest in the Mitting Floral Company to L. D. Clapp, who will conduct the business under the name of the Loomis Floral Company.

The Mrs. E. A. Nelson

Bids fair to become the **COMMERCIAL STANDARD** pink carnation. It is a healthy grower, a free and continuous bloomer and it is sure to thrive wherever grown.

The following letter from Messrs. Robert Craig & Son speaks for itself:

PHILADELPHIA, PA., Jan. 6th, 1902.

S. S. SKIDELSKY, *Dear Sir*—We are much pleased with the "Mrs. Nelson" Carnation, of which you sent us plants for trial last spring; it has a fine constitution and is an abundant bloomer. The blooms are of good size and the color very desirable. It has good, long, stiff stems. We think it will be a standard variety. Yours truly, ROBERT CRAIG & SON.

PRICES.

Per Dozen, $2 50; 25, $3.50; 50, $6.00; 100, $10; 1000, $80.
250 go at 1,000 rate. Send for descriptive circular.

STEADY TRADE—FASHION OF WEARING FLOWERS AGAIN IN VOGUE.—PLANTS SELLING WELL.—NOTES.

The decorations at the Charity Ball held here last week were the most elaborate that ever graced Mechanics Hall. The color scheme was entirely green and white. All of the prominent florists had a hand in the decorations. The good old custom of wearing flowers, which has been in decadence for some time, seems to have been revived and all the storemen report a large sale of violets, roses and lily of the valley for this ball.

Trade in general has continued to hold steady and prices show no disposition to weaken for first-class stock. Good roses have been a little on the short side and fancy carnations meet with a ready demand. Lily of the valley is plentiful now and we are daily receiving good Campernelle and Trumpet major narcissi Violets, both double and single, are plentiful and of fine quality.

The weekly talks held every Thursday by the Horticultural Society are being well patronized by the members and public and a very fine schedule of lectures has been arranged.

Pots of azaleas, cyclamens, freesias and hyacinths find a ready sale in limited quantities and there is a steady call for palms, ferns and other foliage plants.

H. F. A. Lange is on his annual trip to North Carolina for recreation and hunting. A. H. L.

Lenox, Mass.

HORTICULTURAL SOCIETY HOLDS AN INTERESTING AND WELL ATTENDED MEETING.

A regular meeting of the Lenox Horticultural Society was held on January 18. Officers present were, A. Loveless, president, in the chair; E. Jenkins, vice-president; J. Martin, secretary, and F. Heeremans, assistant secretary, together with twenty-nine members. Four new members were elected. A vase of the new rose, Mrs. Oliver Ames, from J. N. May, was exhibited and the committee awarded a vote of thanks to Mr. May, regretting that the flowers arrived in such poor condition that it was impossible to form a definite opinion as to their merits. The society was pleased to welcome one of its old non-resident members, W. A. Manda, who was given a hearty reception, and listened to with interest, on the subject of plant collecting. Messrs. Loveless and Jenkins, who recently paid a visit to the Waban Rose Conservatories, gave an enthusiastic account of the sights there. F. H.

DAYTON, O.—Wm. Kiefaber, C. E. Pease and W. G. Matthews have organized a stock company to go into carnation growing.

Carnation "Floriana"

We believe this to be the best Pink Carnation introduced to date. The color is an exquisite rosy pink with no trace of purple, just the color we have been looking for; looks like the coming pink carnation as it is a steady bloomer and good twelve months in the year. Has a stiff stem, perfect calyx, and is a good free grower. Flower about three inches, of good shape, being well built up. This variety was disseminated Spring of 1901 to a small extent by the originators, Messrs. Fillow & Banks.

We have the pleasure to handle the stock of originators.

PRICE FOR ROOTED CUTTINGS—$6 per 100, 50 at 100 rate; $50 per 1000, 500 at 1000 rate. Less than 50, 8 cents each.

Lowell, Mass.

JANUARY BUSINESS NOT HEAVY BUT PROSPECTS GOOD.—STOCK EXCELLENT AND SELLING WELL.—FLORIST SUES A COPPER MAGNATE.

January business has not been what we could call brisk. There has been plenty of funeral work but in more than one case it was requested that there should be no flowers, which is not at all pleasant to read when stock is accumulating. The rose supply is better than it has been for a long time, better heads and stronger stems, and prices range from $1 50 to $3 per dozen for Brides and Bridesmaids. Meteors of late have been poor. Perle and Sunset sell well. Carnations are plentiful and some very fine blooms are to be seen. A great many "kicks" have been registered during the past month, on account of carnations going to sleep. Customers buy good fresh stock one day and telephone the next that they are asleep. Violets are now as good as one could wish and bulbous stock is fairly abundant. Greens are in good supply. Patten & Co., of Tewksbury, have fine Asparagus Sprengeri. E. N. Price & Sons, of Waverley, are sending extra lilies and mignonette. Plants are in great demand and Boston fern short of requirements.

One thing that is interesting the local florists at present is that one of them has brought suit against a wealthy "copper king" for a flower bill of $300, which the latter says is excessive. A M.

Dallas, Tex.

We are having an extremely dry spell here and the dust has been terrible for the last few weeks. Water is very scarce and we hope rain will come soon. The Texas Seed and Floral Company is settled down in its new store, corner of Elm and Ervay streets. They have the largest and best arranged seed store in the south. Space 25x100 is devoted to the retail department and 50x100 two stories in the rear is devoted to the wholesale seed department, where they have a switch for unloading cars. They have also bought out the Southern Floral Company and are growing a large stock of plants for catalogue trade. Roses will be the specialty and these will be grown both for the wholesale and retail trade. They have over 10,000 American Beauties in the field now beside a large stock of other varieties. Carnations and other stock are being grown under glass for their store trade. Dallas is rapidly coming to the front as a plant and cut flower center. SOUTH.

CRESTON, IA.—E. H. Stahl has sold a half interest in his business and the firm is now McGregor Bros. & Stahl.

NEW CARNATION

RUBY KING

Just what we have all been looking for. A dazzling cerise; much more so than Tidal Wave. Always in bloom, strictly non-cropper. No disease—anybody can grow it. Average flowers 3 inches; stem very stiff and wiry; fine keeper; can be planted quite close. Flowers fringed and high built, resembling Flora Hill. Only a very limited number will be sent out this year. $1.25 per doz. by mail; $8.00 per 100.

MRS. OLIVER AMES.

For description, prices, etc., see advertisement in this paper January 4th, 1902.

What the leading Wholesale Florists of the different cities say of this Rose:

Mr. H. H. Battles, of 108 South 12th St., Philadelphia, Pa., writes under date of Nov. 23, 1901:

DEAR MR. MAY:—The Mrs. Oliver Ames is beautiful We have given it the place of honor in our shop and shall take much pleasure in showing it to others. I was unfortunate in not seeing it at our late show, but heard it spoken of in very complimentary terms. Yours very truly, H. H BATTLES.

TRADE GOOD AND STOCK IN EQUAL SUPPLY. —BULBOUS STOCK PLENTIFUL —PERSONAL NOTES OF INTEREST.

The weather has been ideal during the past week, clear and just cool enough to keep stock moving nicely. Business is good, with an adequate supply of stock Tulips, freesias and daffodils have made their appearance, but the latter are not very good. All the stores are showing good plants of azaleas, cyclamens, primroses and cinerarias, which sell well. Fern balls are offered and move fairly well. There has been a good call for design work. Mark Aitken did four decorations this week; they were more elaborate than the past season's, showing that we are gaining every year.

Lilies are badly diseased again this year and quite a number have been thrown out. It looks as though it will take some hustling to bring the balance in on time.

Mrs. Frank Burfitt, who has been sick for a long time, underwent an operation January 22, and is doing nicely.

Mr. Taylor has resigned his position with the Murphy Company.

Mark Aitken is smiling these days. It's a daughter. A. B.

Minneapolis.

TRADE BRISK AND STOCK IN SHORT SUPPLY —CARNATIONS MUCH IMPROVED IN QUALITY AND QUANTITY.

Last week's trade was exceedingly good, the demand being greater than the supply, especially for roses, which commanded $9 per hundred. Beauties are scarce, although the demand for them has not been above the average. Violets are plentiful and in fair demand. Romans cannot be secured at all. Some fine carnations are now appearing, commanding a good price. Smilax and adiantum have been in great demand on this market and there does not seem to be enough of these goods.

Many of the trade have issued their annual calendars. Swanson, Lynes, E. Nagel & Co., and Holm & Olson, of St. Paul, sent out the choicest. One from L. P. Lord, of Owatonna, is worth a place with the best.

C. C. Hunter, representing the Jewel Nursery Co., of Lake City, is canvassing the city and reports an active business. C. F. R.

LENOX, MASS.—The range of new greenhouses being erected by Hitchings & Company on the W. D. Sloane estate will be finished by April 1, twenty-three houses in all, and with the exception of the Gould conservatories, Tarrytown, will, it is said, constitute the largest range of private greenhouses in this country.

REMEMBER you can get our Standard Brands of Wild Smilax and other Greens from such people as J. B. Deamud, Chicago. H. Bayersdorfer & Co., Phila. L. J Kreshover, N. Y. City. Vail Seed Co., Indianapolis. Ed. Reid, Philadelphia. J. M. McCullough's Sons, Cincinnati, O. Michigan Cut Flower Exchange, Detroit, Mich. or direct from us.

HORTICULTURAL SOCIETY VOTES TO ASSIST IN A SPRING EXHIBITION.—TRADE NOW ON SATISFACTORY LEVEL.

At a recent meeting of the Pacific Coast Horticultural Society it was decided to if possible hold a spring show in co-operation with the California State Floral Society and divide profits if there are any. As the younger society has all the nurserymen and florists and growers of San Francisco and vicinity as members, the older society should be only too glad to make any kind of fair arrangement to secure this aid. The following gentlemen were appointed on the exhibition committee: H. Plath, Wm. Eldred, F. Cleis, Jos. Thompson, Thos. Munroe, W. Bagge and C. Abraham. It was also decided to change one meeting night to the first Saturday of each month to give parties outside the city a chance to attend, the other meeting being the third Monday as usual, a considerable increase in membership being expected through this move.

Business was somewhat quiet just after the first of the year but trade has been picking up lately and all good stock is now readily taken up. Most items are rather scarce and prices are back at the level mentioned before Christmas and can be called good. GOLDEN GATE.

Washington.

SOCIAL ACTIVITY MAKES GOOD BUSINESS.—AN EXCELLENT WINTER FLOWERING PLANT.

Thompson's magnifica, the crimson celosia, makes a fine winter flowering plant, from cuttings in summer and grown in a light, temperate house. They last for a long time. At this writing I have some in 4-inch pots about ten inches high in good shape and the crimson plumes are very attractive.

President and Mrs. Roosevelt have set the pace for entertaining this winter and everybody is on the move to keep up with them. J. H. Small & Sons had the decorations for the bachelors' cotillion and for the seventeenth annual banquet of the Gridiron Club. P. G.

GREENFIELD, MASS.—C. A. Jacobs has opened a retail store in the Lamberton building.

TARRYTOWN, N. Y.—On Wednesday evening, January 22, occurred the annual dinner of the Tarrytown Horticultural Society, which was a most successful affair in every respect. There were a number of visitors present from New York city and Poughkeepsie who helped out on the oratory and songs. F. R. Pierson, C. W. Ward, Peter Fisher and C. Warburton contributed a handsome display of carnation blooms.

BULBOUS FLOWERS IN LARGE SUPPLY BUT MOVING SATISFACTORILY. — VARIOUS NOTES OF LOCAL INTEREST.

Bulbous products are coming in rapidly and the quality is very satisfactory. Hyacinths, tulips and narcissi are selling well. The stock of carnations and roses is good. Henry Morris has some special white carnations that sell readily at $2 a dozen. Mr. Morris has a dark red azalea, Apollo, for which he gets as high as $10 each. Mr. Morris will model two sash greenhouses into one modern house and has let the contract for another new greenhouse to the Lord & Burnham Company.

P. R. Quinlan & Company have an abundance of bulbous flowers and have been doing a quantity of funeral work. Last week Manager Wheadon made a large pall of solid violets and violet leaves and fringed with maidenhair ferns. They are filling many orders for table centerpieces with tulips.

Harry G. Lyons, of this city, sued Stephen Whitton, a Utica florist, for malcious prosecution and was granted a verdict of $45. Lyons bought some flowers of the Utica man and gave a check for $28. The check went to protest and Lyons was arrested, but the case did not succeed. A. J. B

Milwaukee.

TRADE GOOD AND STOCK SCARCE.—SWEET PEAS BRING GOOD RETURNS.

Flowers are quite scarce, good roses particularly. The Loefflers, famous violet growers, have made a hit in sweet peas. They have been sending in good sized consignments which have sold at 75 cents a bunch of twenty-five. Whatever those boys do is done well.

The M. A. McKenney Company made a beautiful wreath lately, of mahonia leaves and Meteor roses, that was novel and beautiful, the autumn tints on the leaves blending with the dark roses. C. B. W.

WESTFIELD, MASS.—C. H. Jacobs has opened a down town store on Main street, near the corner of Broad street.

WEST HAVEN, CONN.—A. J. Thompson has a violet sport of a peculiar color. The flower is said to be drab, with a carmine stripe through the center of each petal.

FREDERICTON, N. B.—Miss Ada M. Schleyer has a well ordered establishment of 6,000 feet of glass and is doing a prosperous trade. She recently had a column illustrated writeup in the souvenir edition of the local paper, which was good advertising.

"DORIC" HEATER.

Take Notice, Please.

Ye greenhouse owners please take note of the following advantages offered by the

"Doric" Heater

Deep, round firepot, with no dead corners; heating surfaces so arranged as to get the full benefit of the fire; burns any kind of fuel, hard or soft coal, coke or wood; requires no brick setting. Is extremely durable. Does just what a heater ought to do most economically. Don't change or purchase until you examine the "Doric" Heater.

Specialists for Stock Seed Growing.

Now that Mr. Eckford's catalogue for 1902 puts in its appearance it suggests a very pertinent message for the season. I ask myself how it is that year after year on such a limited piece of ground he can get the same uniform result, and gladden the eye of any visitor with such a display of culinary and sweet peas. Every one sees at Wem the same green forest of trials of culinary peas, a numberless list of sorts, and each row showing its own characteristics at their best—thrifty growth, ambitiously podded, the science of the thing standing right out to prove a progressively intelligent work. While the sweet pea problem is different from the culinary, since a longer season of bloom is the aim, and blossoms rather than podding qualities are the criterion, still at Wem each in its way produces year after year the results that intelligent labor has a right to expect. Mr. Eckford has no such cataclysm of utter failure to paralyze his ambition as we have had in this country. But then, he has his great success with his own well acclimated seed. And I am tempted to warn my English and Scotch friends not to risk their chances on the seductive temptations that have beguiled us to our ruin. There is no reason why we could not have a hundred Eckfords in this country in all parts of our diversified territory, emulating him, competing with him, laying foundation each year for better work the next. And there is every reason why we should now go to work intelligently and bring this desirable and possible thing to pass. And if the difficulties are mastered on the sweet pea it will insure a new era for the whole field of floriculture. The greatest discouragement we have in American floriculture is just this which is illustrated by the collapse of the sweet pea. It has brought us face to face with one of the Sinaitic commandments of natural law. By violating this law we have brought the inevitable upon ourselves.

Just a word of preachment on this law. Nature has distributed its fauna and flora over the earth according to the principle of adaptation. Everything in its native place has a wonderful tenacity of life, and survives in spite of the struggle that nature imposes upon it. We marvel at the vitality of the seed of every wild plant. So, too, this native plant and seed will by virtue of this tenacity of life bear transplanting to other climes and conditions to a considerable extent. As long as we have this primitive quality of tenacity of life and hardihood in our favor we can with many plants almost ignore the question of locality and climate. A few years ago the sweet pea had this quality. But what have we been doing? We have been developing it right away from this primitive quality. Worse than that, we demand that nature shall allow us to select our locality where the flower can be developed to the highest possible quality of blossom, and then select another locality six thousand miles away where the conditions are most favorable for producing a large crop of seed. We demand that nature shall consent to the widest distribution of this seed to a hundred different local and climatic conditions, not only in America but across the seas. By this time we have developed the life of the plant away from its native hardihood into a delicacy of constitution least able to bear this globe-trotting nervous strain. All the symptoms I have been able to discover of late in this flower have been of this sort. We get a denuded root, a belated bloom, a battle for even a short season of florescence, half the vines succumbing to the first sultry day, or even the first effort to throw out buds, and soon the aphis or the red spider take entire possession. The blossoms at best are but a travesty of their true type, and a disgrace to their name. No self respecting man can work under these conditions. Really the problem is in our own hands. Mr. Eckford has done his part grandly. The seed growers have done all they could. The necessities of the trade exculpate them from all blame. But the fact remains that we have temporarily lost the bloom, a fact which should stimulate rather than discourage us.

Just now I have lost my theology, too, and am too busy trying to crawl out from the wreck and get a new start, to do any thing at present in sweet peas; but it is as plain as daylight what needs to be done to recover this flower at its best. If Mr. Eckford can establish and hold his seed stock so that at Wem it will give him results of an assured kind from year to year, the same intelligent work will duplicate his success in every part of America. Let any interested party fling off the temptation of cheap seed, getting, of course, the best seed the market affords to start with, and then settling down for a determined effort to establish a local character in his own seed stock, such as will produce a normal root, and the qualities of vigor that are necessary for successful culture. It will require patience to get even a few of the best sorts

started on the up-grade towards the desired result. I should expect but little result the first year, to make selections from for the second year's planting. But I should begin with all the best colors, using American grown seed to start with, and persistently re-selecting and planting the strongest product of each year. I think that the ratio of progress will be faster after two or three years. The desired result will not be attained till a normal, old-fashioned, fibrous root is regained. At present nobody is getting anything but a denuded root. Nature will give back to us all that we have lost, under certain limitations. Any man who has an acre of ground, and is willing to put four to ten years' labor on the experiment, using of course scientific methods for preparation of soil and culture, would at least get a strain of seed that he and his neighbors could depend upon. And even if there could be put back the vigor that our trade stock had ten years ago it would be good news to the floral world. My idea would be to have strong sweet pea seed stock localized in as many different states as possible. And if we can thus localize good American strains, then we can carry the flower up in quality, and hold it up, and still get uniform results from year to year. This does not mean cheap seed, but it does mean that those who want to grow this flower will have some available source of supply of such stock as will give them results such as Mr. Eckford's home grown seed give him. It is time we saw the folly of violating nature's law of adaptation. We cannot expect these highly developed floral products to adjust their sensitive quality to such violent exactions as we have made onto them. The more highly developed they are the more they will resent change of location and climate. If I were a big seed jobber or wholesale grower I should select only a moderately favorable locality, and put some intelligent man onto this experiment. I say a moderately favorable locality, for if the root strength is put back into the stock in such locality, the seed growers could grow from this a trade stock that would adjust itself to a pretty wide range of territory. A few people are still getting what they call sweet peas from their annual planting, but it is so much like a game of chance that we cannot generalize on the scattered cases.

Now is the time for a renascent generation of real floral enthusiasts, and the freer they are from sordid commercial motives the better. And the lower down they begin in the solution of the problem the better and the more merit. And while the further northward one selected the locality for regenerating the sweet pea the easier the apparent success would be, I doubt if it would help us very much here in Massachusetts, or anywhere along the 42nd latitude. We have got to have the whole category of strong qualities put back into this flower before we can enthuse on it again in this region. This means that somebody must localize for us a seed stock of the sweet pea, and restore to it such a basis of inherent vigor that we shall have a foundation not only to do our summer's work on, but so that we can compete with Mr. Eckford in building up the finest grandiflora type of each color. What use is it for us to plant seed of Miss Wilmot when we cannot at present grow even the old original Orange Prince? Nothing but a thorougly localized seed stock can give us a basis to work on that will have any warrant of success in it. No kind of specious apology for the present situation is going to help us one iota. No suggestions about fungus or parasite are of any account. There is a law of nature, following which we shall find a normal basis of natural health to work on. I do not mean to say that we can hybridize and develop a flower up to the highest notch of nervous beauty and expect it will have all the hardihood of a Dutch maiden, but the only way to get enough constitution to build a high development on is to localize the particular strain we are at work on. Even though it be a fact that the introduction of blood from another strain or locality may have a tendency to improve the stock, yet the foundation stock must be thoroughly localized in order to reduce to a minimum the uncertainties of our work. Our chances of stumbling on success in high grade floriculture are all the while lessening. And our enthusiasm will be very evanescent unless we can have a science that will have some guarantee of uniform results. I believe the great law of adaptation will do just this for us, if we will go to work persistently on a strain of sweet pea seed stock, and localize it. I have said enough for once. The question branches out in many directions, according as trade interests and amateur enthusiasm are affected.

THE LATE CHARLES CONNON.

(See page 49.)

I notice that Mr. Eckford confined his new introductions to three sorts this season. They are Jeanie Gordon, bright rose shading into cream; Gracie Greenwood, soft cream, shaded pink, deeping at edge; Lord Rosebery, rosy magenta.

The 100-page report of the Crystal Palace celebration of 1900 seems now to be in print and is offered in Mr. Eckford's catalogue. He makes a valuable color classification of all the recognized sorts.

W. T. HUTCHINS.

AUSTIN, MINN.—A. N. Kinsman & Company have bought glass and other material for two houses of 5000 square feet area to be built in the spring.

LAWRENCE, MASS.—A. H. Wagland is fitting up a first-class florists' store at the corner of Broadway and Whitman street, and contemplates building three greenhouses on the adjoining grounds.

Cutting, Packing and Shipping Flowers.

[A paper read before the Florists' Club of Philadelphia, February 4, by George M. Moss.]

Under the head of cut flowers, as the term implies, we must necessarily include everything from the choicest of orchids down to the common "green goods." Almost anyone could clip off a string of smilax, or pick adiantum, but it takes a man with some knowledge of the finer flowers to cut them properly.

In my few remarks I am not going to lay the law down to each and every grower as to just how he shall, or shall not, cut his flowers, but will merely give my personal views, as I see them from day to day, which, however, may differ very widely from those of the experienced grower of the present day.

First, we must take the weather into consideration and cut the different varieties of flowers accordingly. Take, for instance, the rose. In cold weather it should not be cut as close as it should in warm weather, as it will open very little until put in a warm room, while in warmer weather it will blow open very quickly if not cut tight. The grade of really first-class roses as they leave the greenhouse is frequently lowered before they reach the commission man, simply on account of bad judgment in cutting and packing.

The carnation is another flower that needs our attention. Don't leave it on the plant until it is fully developed. It may look very pretty in your greenhouse, but that doesn't bring you in dollars and cents. Cut it before it reaches the state of perfection, so familiar to us all, and give the retailer a chance to display it in his show windows "before it begins to lose its natural beauty," where the flower buying public may admire it. This is where you must look for your revenue in the first place.

The violet is another flower that demands our special attention. Three or four years ago it was very difficult to find a really good bunch of violets, while by persistent hammering at the growers the commission man is enabled to offer some magnificent bunches of the Princess of Wales and Lady Campbell varieties.

The same rule should apply to all other varieties of cut flowers. After the flowers are cut, the greatest care should be used in handling them before shipping to market. The stems should be stood in water for a few hours, so that the flowers may have a chance to harden sufficiently to stand shipment. Vaults or cool rooms are a good place to keep them, provided they are not too damp and are well ventilated.

After the flowers are ready for shipment the greatest care should be taken in the packing. Right here is where many a first-class flower is spoiled and the grower cannot understand why they are graded as seconds or thirds. Some of the growers should see their consignments opened. If they could there would possibly be fewer kicks registered with the poor commission man.

It would be worth one's while to visit some wholesale establishment and inspect the various consignments as they arrive in the course of a day. Some of our more up-to-date growers have taken advantage of the times and pack their flowers in suitable boxes, using wax paper or tissue paper to protect them, while many still cling to the newspapers and soap box. It goes without saying that the former are the more successful and are the ones who are building new houses each year.

Some consignments arrive in good condition, showing that the grower fully recognizes their worth and handles them accordingly, while others come out of the boxes in horrible condition, showing that the sole aim was to get them into any old box, and catch the first train. To these growers I would suggest that they invest in some suitable shipping boxes, also some tissue or wax paper. They need not buy the expensive grades of paper, as used by the retailer, and then get up an hour earlier in the morning. Then possibly there would be less second-class and third-class flowers on the market and much better prices would be realized from the consignments.

Another grevious mistake some growers make is packing from 1,000 to 15,000 carnations in one box. What is to become of those at the bottom? The drippings of the top ones must go somewhere and naturally they go to the bottom of the box, where most likely the white flowers are. One can no doubt imagine in what condition they arrive at their destination. Then the grower wants to know why his carnations are marked second-class, while those from his neighbor, which were no better, apparently, when shipped, are all firsts. Possibly this same neighbor is keeping up to the times and knows how to take care of his flowers. One or two tiers, according to the depth of the box, will relieve the pressure and the bottom flowers will come out as good as those occupying the top berth.

After the flowers arrive at the various commission houses they should be graded; careful handling raises the grade to the highest possible point, and display to the best advantage to thereby attract the retail buyer's eye. There is more than likely to be some poor ones in every shipment. If so, keep them out of sight, unless they are called for especially. As a general rule the retailer will not look at that kind of stock, but what a howl he makes when it is sold to the street merchants. What are we going to do with it? If the grower sends that kind of stuff to the wholesaler, it must be moved and the street seller is the only outlet.

At times when there is a general scarcity of flowers, the retailer is glad to get what at other times he turns up his nose at, and don't ask you if they are fresh when he sees you take them out of the box.

There are two classes of buyers, the local and out of town. The former selects his own stock and always gets the best (at least he thinks he does), while the latter has to rely on the honesty and ability of the commission man. Perfect harmony should prevail between the grower and the commission man that the latter may know just what to expect from each and every shipper. By working together each will derive much benefit.

American Carnation Society.

RATES TO INDIANAPOLIS.

The trade papers are full of invitations for the delegates to the carnation convention to stop enroute and just by way of a little caution it might be well to state that to secure the rate of a fare and one-third no stop-off privileges are allowed unless they can be arranged with the local ticket agent for the trip going. This is one serious disadvantage for us carnation men, as we like to make all sorts of stops right in the growing season, but if we expect to get and hold this fare and one-third it will not do for many parties to buy their tickets in any other way, for if we are one short of the necessary 100 we will not get the rate.

ALBERT M. HERR.

S. A. F. MEDALS.

Intending competitors for these will please note that they are not to be given unless the judges consider the variety worthy, and the judges would hardly consider an exhibit of less than a dozen blooms as worthy of the medal; in fact, as suggested by the AMERICAN FLORIST, there should not be less than twenty-five for fair competition. It was an oversight of the writer not to specify such a number instead of giving it as received.

ALBERT M. HERR, Sec'y.

DEPARTMENT OF REGISTRATION.

Dailledouze Brothers, Flatbush, N. Y., register Alice Roosevelt, color clear shell pink, of the Daybreak order, stem stiflest we know of, size three inches, calyx never splits, form nice and even, foliage good and broad, good grower and constant bloomer with no surplus grass.

ALBERT M. HERR, Sec'y.

AN INVITATION.

For the accommodation of visitors to the convention at Indianapolis and who are expecting to go as far as Chicago, James Hartshorne, of the Chicago Carnation Company, intends running a special car on the Rock Island road from Chicago, to stop at their greenhouses at Joliet, and return. All those who are likely to accept this invitation, please send a postal notifying him what hour and day would best suit their convenience, so that his arrangements may be made not to conflict with any of their own plans. Watch for him at Indianapolis, and he will notify you as to the arrangements he has made.

CARNATIONS.

CARNATIONS AS POT PLANTS.

It seems to me very strange that the American Carnation Society has never made any sort of an effort to bring out the carnation as a pot plant. It may be that the society is so dazzled by what has been accomplished in the development of the carnation as a cut flower that it believes such to be the flower's only mission. But it is not so, I am very sure. Well grown flowering plants of all kinds are running a neck to neck race with cut flowers, but I do not think either will distance the other, because the demand for both is increasing each year. This brings me to what I know can be done.

Of the thousands of seedlings now being raised annually there are scores which have fine compact habit of growth, with foliage the color of blueberries, flowers borne on short stems, and buds carried in clusters of from three to five and about

two or three inches in diameter. Many of the flowers are of the finest colors. Now, what happens to them? Why, down they go to oblivion, when, if they were rightly tended and properly grown, I do not see why pot plants with twenty or more trusses of flowers, each truss five or six inches in diameter, should not be produced and retail for at least $1 50. This is a modest estimate in any case, and it may be that some of the crack growers could produce plants good enough to sell for twice $1 50. However, I am not predicting. Looking backward, I have in my mind's eye the dear old La Purite, Snowden, my old Meteor, that I brought with me when I came across the pond; and my Isabel and Beatrice, that were great pot plants in their time.

Perhaps some suggestions as to how they should be grown would be of value. This is how, or about how, I would grow them. Take the plants up from the open ground any time they are ready and drop them into 9-inch shallow pots, such as we use now-a-days for azaleas, and so forth. Make the soil firm and feed well. See that the drainage is good. Don't botch the potting. The one plant in a pot business has been knocked into smithereens; instance the five or six plants in a pot of palms and other things. If it is legitimate with such things, why not with carnations, geraniums or any other plants?

Well, supposing one wants to show carnations in pots at the exhibitions next November or wants them for use at Christmas or Easter, select well rooted plants now and place them in 2½-inch pots. Keep them cool and let them grow stocky. In the early May select a sunny place outdoors, on well drained soil, and set the plants eighteen inches apart each way. Take a piece of ½ inch or 1-inch board ten inches square and place it five inches below the surface of the soil. Then take plain roofing paper and cut into strips five inches wide and two feet long. Dip these in thick lime wash and let them dry. Then make them into cylinders, which will be about eight inches in diameter, and place them on the boards sunken in the ground. Fill these improvised pots with the best soil you have, and plant in each circle six of the carnation plants, one in the center and five around it, making the soil very firm. Fill in around the paper pot with the general soil of the field and make that firm.

As the plants develop pull out—do not cut—the center of each plant and select four or five of the strongest growths as they appear. Pull out all the grass except the selected shoots. Don't let the outside plants interfere with the center one, or vice versa. Take off a few of the largest leaves, so as to balance the whole, and don't be afraid to put a little labor in their treatment, for they will repay you. You can gauge the time it takes for the development of the flowers, and if you have the right sorts you will pick out the center buds and let the side shoots develop—and there you'll be.

JOHN THORPE.

CAUSES OF SPLIT CALYXES.

Bursted calyxes seem to be giving an unusual amount of trouble this season, and of all the aggravating things that happen to carnations this is perhaps the worst, as it is usually the very finest flowers that are subject to it. Some varieties are especially subject to this trouble and where it is a part and parcel of the natural habit of the variety we can expect from twenty-five to fifty per cent bursted flowers with the very best treatment and must figure on these in estimating the value of the variety in question. Some of these varieties produce such magnificent flowers that fifty per cent of the cut being good makes them worth growing, as seconds can often be made use of.

Varieties not subject to this trouble will under certain conditions burst quite badly and by hunting for the cause the remedy can be found. The one condition that will produce bursted flowers in the greatest quantity is a low temperature, or sudden changes of temperature. Perhaps the best average temperature for all carnations is 50° at night and 60° to 70° during the day. Some will stand 10° lower without bursting and some want 5° to 10° more heat. Now is the time to note these differences and remember them when planting next winter.

When a night fireman is employed he can make three or four trips through the houses each night and see that the proper temperature is maintained by turning off or turning on a pipe or two as may be demanded. Where automatic ventilation is used this constant watching can be dispensed with, but where neither of these two conveniences is at hand the grower has to work under adverse conditions and needs every adjunct available.

THE LATE JAMES COMLEY.
(See page 48.)

With a night fireman I have found it a good investment to purchase a dozen registering thermometers at a cost of $2.50 each. They are a satisfaction to me and keep the night man attending to his duties, as he knows the thermometers will record any failure or inattention during the night. The thermometers register the highest and lowest point reached in the house during the night and are thoroughly reliable. This registration will often be a surprise to some growers and very often will explain the bursting of calyxes by showing that the house has at some time during the night fallen as low as 40° or lower.

Where the proper temperature is maintained one will have to look for other causes and the next greatest trouble will be found in over-feeding, a fault found in many cases, as the demand for large flowers leads many growers to make this error, and it has to be a pretty strong calyx that will stand it.

Over watering will also produce split calyxes, as the plant cells are unduly expanded by the excessive moisture and often when the soil is too full of water the temperature of the soil is much lower than that of the house. This adds to the trouble, especially so in dark weather. A careful attention to these points will in most cases overcome the difficulty and the fault is well worth overcoming, as split calyxes make quite a reduction in the grower's receipts.

ALBERT M. HERR.

TEMPERATURES FOR VARIOUS SORTS.

ED. AM. FLORIST:—Please indicate night and day temperatures best suited to the following carnations: White Cloud, Flora Hill, Norway, Peru, Bone Homme Richard, Mrs. Joost, Dorothy, Lawson, Crane, Maceo, Prosperity and Irene.

WESTERN GROWER.

This is one of the most important subjects connected with carnation growing and to get the best possible results from the plants an even and regular temperature must at all times be maintained. I have found Mrs. Thos. Lawson, Flora Hill and Prosperity to give best results in a night temperature of 54° to 56°. White Cloud is a variety that is very susceptible to thrip and red spider and must therefore be grown in a temperature of not more than 50° at night. Peru, on account of its scant petalage and rather weak stems, does best when given the same treatment. Mrs. F. Joost, G. H. Crane and Gen. Maceo require a night temperature of 52° to 54°. We are growing about 2,000 plants of Bon Homme Richard and it has done admirably to date. I find that it does its best at 54° to 56° at night. Dorothy, Norway and Irene we have not grown.

Referring to day temperature, we give all of our carnations a temperature of 58° to 60° on dull days, with a small crack of ventilation. To maintain this it is sometimes necessary to keep a little steam running through one of the pipes. When the weather is fine and bright we aim to get all the fresh air onto our plants that we can without causing a draught. On such days the temperature sometimes runs up to 70°, but this will do no harm providing there is plenty of ventilation. As the sun goes off the glass it will be necessary to watch the ventilators closely, also do not allow the temperature to fall too low before putting on steam, but aim to have the thermometers register the proper night temperature by the time the sun has left the house.

CHAS. W. JOHNSON.

CARNATIONS IN AUSTRALIA.

The following particulars, from a well known firm of Australian growers, appear in an Antipodean contemporary:

"We believe that the American carnation will enjoy a considerable measure of popularity in Australia when their qualities are known. We may say that we unsuccessfully tried to import a small shipment of the best perpetual carnation in England from Charles Turner, of Slough. They arrived two weeks ago, half being rotten, the other half just showing faint signs of life, expiring sparks evidently, for they've 'gone home' now, and our two dozen dead plants cost us £7 odd to land here. Same thing happened last year, and we are now giving up trying to import perpetuals. The borders being of hardier constitution will carry with far less risk, but carnation lovers here in Australia won't look

THE LATE JAMES COMLEY IN THE MIDST OF HIS FAMOUS RHODODENDRONS. (SEE PAGE 48.)

at borders, so it's little use importing them. We note that in Victoria and New South Wales the phrase 'annual carnation' is used in place of the English phrase 'border,' and this may be more understandable to the outside public, though there is a chance of confusing it with the 'Margaret,' which is often grown as an 'annual.'

"It seems certain to us that the Australian tree carnation is rapidly being improved, and that if as great improvements take place in the next ten years as in the past ten we shall have something in front of us worth living for."

Banquet at New Haven.

The first banquet of the reorganized New Haven Horticultural Society, held at the Tontine Hotel on Tuesday evening, February 4, was an unqualified success in every particular, a credit to the society and a generous endorsement of the well-directed efforts of the prime movers in the resuscitation of the body which had been so long inactive. Fifty gentlemen were present and did full justice to a well-served repast, while an excellent orchestra played, and then listened to the flow of oratory that was let loose until midnight struck. Toastmaster J. N. Champion read a number of letters from guests unable to come and gave some interesting facts in connection with the early history of the society, which was organized in 1830, and made hopeful predictions for future usefulness under new guidance and the influence of young blood.

W. J. Stewart, of Boston, extended congratulations and, bespeaking the prosperity of the organization, warned against dissentions and those who so often, in newly formed societies, hinder and discourage development by opposition, fault-finding or personal animosities. Referring to the remarkable career of the Massachusetts society he advised an imitation of the policy of that body in acquiring and holding real estate which would appreciate in value and thus furnish the needed foundation for financial strength.

J. F. Huss, of Hartford, brought best wishes from the Hartford Florists' Club and told of its success, also the good progress made by the Lenox Horticultural Society. He made an enthusiastic reference to the growing public appreciation of fine gardening and the splendid opportunities for developing this in the laying out of herbaceous borders and high-class shrubbery plantations.

Mr. Keith, superintendent of the Bridgeport park system, told some of his side-splitting stories in his inimitable manner. Of the local speakers were John Doughty, who presented an optimistic view of the future, the present occasion being evidence that the right men actuated by the right spirit are at the helm, and relegated grumblers to the rear; Mr. Ferrier, who agreed that grumblers are bad but maintained that kickers are good and healthy for any society, a good squabble occasionally furnishing incentive for all to pull together when it was over; Mr. Gardiner, to whom much credit is due for the awakened interest, who spoke of the value of regular exhibitions; Mr. Carpenter, an amateur, who applauded the harmonious spirit manifested; Mr. Thompson and Mr. Woodward, each of whom had a good fund of stories, and Mr. Grove, who made a spirited protest against the retail florists of New Haven for ignoring the home growers and going to other markets for their plants, reminding his hearers that a good grower must be intelligent but pertinently inquiring "What's the use of being intelligent unless you are paid for being intelligent?" His assertion that money counts was loudly applauded.

Messrs. Ferrier, Morton and Handyside sang several songs very acceptably. The banquet hall was prettily decorated, E. J. Morse contributing carnations and smilax, F. G. Horn tulips and carnations, John Doughty a fine specimen Lorraine begonia and J. N. Champion palms.

Banquet at Orange, N. J.

The seventh annual dinner of the New Jersey Floricultural Society, at Orange, Wednesday evening, February 5, was one of the best in history. Nearly half a hundred were present. President John Hayes presided and John N. May acted as toastmaster. Dr. Ward, of the State Horticultural Society was the first speaker and extended good wishes. He recounted the history of his society and its objects and complained of the small state appropriation therefor. Wm. J. Stewart, of Boston, next responded for the S. A. F. He told of the motives back of its organization, the spirit of union which was its inception and the spirit of progress, which is its guiding influence. He contrasted the typical horticultural literature at the time of the society's founda-

tion and to-day, crediting the society with being the main incentive for the progress made.

Mr. Totty, of the Morris County Society, responded for sister societies and Henry Bird for florists past and present. Mr. Bird drew an impressive parallel between old and new conditions of culture, greenhouse construction and so forth and predicted more and more systematizing and and specialization in the floriculture of the future. Mr. O'Mara spoke to the toast to the seedsmen in his customary witty manner, occasioning much laughter and applause. Touching the question of a national flower he said the seedsmen would never favor the sunflower or anything else the seed of which is worth 10 cents a quart; rather choose something which brings "a dollar a pinch." He said for himself he favored the potato blossom as something representing the economics and heroics of American life but was afraid the A. P. A. would object. Seriously, he recommended the aquilegia. He paid his compliments to the national government for its performances in the seed business and quoted approvingly George Watson's recent scintillations in the AMERICAN FLORIST.

"Our pastimes" was the toast responded to by J. A. Shaw, who also read original verses illustrating the beauties of the Oranges. Dr. Kitchen described some recent experiments in soil chemistry and J. B. Davis was as gallant as ever in his response for the ladies, telling of their increasing importance in floriculture and describing the provision made for their education at Cornell University. S. S. Butterfield, Henry Bird, George Smith and Peter Duff all contributed to the musical part of the exercises and Mr. May received a vociferous vote of thanks as an ideal toastmaster.

American Rose Society.

The secretary of the American Rose Society has prepared the preliminary premium list of special prizes for the exhibition in connection with the meeting at New York on March 11 to 13. Most important is the Stoeckel prize for six vases, six varieties, twenty-five blooms of each, first money being $50, second $30 and third $20. The executive committee prize is for a display of roses in pots and the trophy is a silver cup valued at $100. The American Rose Company offers $25 for twenty-five blooms of Golden Gate and Mrs. Thos. Newbold offers a like sum for fifty blooms of Liberty. The president's prize of $25 is for three vases, two of which shall be for Bride and Bridesmaid and the third not American Beauty, twenty-five blooms of each. H. A. Siebrecht offers a cup valued at $150 for a display of hybrid perpetual rose plants in not less than 8-inch pots. This trophy is only to be held one year. The Sturgis silver medal is for the best vase of Lamarque and the S. A. F. medals are offered for the best new roses of American origin. Novelties will be given the society's certificate.

The secretary reports that members are paying their subscriptions rapidly, but he wishes to increase the list. No election to membership is necessary, the mere sending of $3 to Leonard Barron, 136 Liberty street, New York, constituting one a member. Elaborate plans are being made for the literary part of the session at Berkeley Lyceum theatre. Samuel Parsons, Dr. Van Fleet, Jas. Wood, Dr. Huey and Dr. Halsted are among those who will speak.

Primulas for the Greenhouse and Home.

That primulas have a well merited value for greenhouse culture all must acknowledge. Many in the past have made them subjects of their skill, and we to-day are enjoying the advantages of improved varieties and new forms particularly suitable for greenhouse culture and exhibiting many features with which the past generations were unfamiliar. Apart from their value as plants for the home they afford cut flowers which are by no means to be despised, and their season of flowering renders them almost indispensable to the gardener and florist.

The comparative simplicity of their culture is alike advantageous to the amateur and florist. Certain rules in their management are necessary, however, and considering that the object in view is to have well established plants by autumn it will be evident that sowing the seed early is advisable, March and April being the better months. Another advantage derived from early sowing is in having the seedlings sufficiently advanced to withstand the early summer heat. Good and ample drainage with well cleaned pots is essential, also soil light and rich in texture, which should consist of three parts turfy loam, one part leaf mold or peat, one part sand and a reasonable proportion of cow manure or other good fertilizer.

Their subsequent treatment consists of potting on as required, and plenty of light, avoiding full sunshine. Careful watering and an occasional moistening of their foliage will keep them growing. A convenient frame or greenhouse where these conditions are readily applied is admirable, and by autumn excellent plants in 4-inch, 5-inch or 6-inch pots will result. These form the most salient features of primrose culture. Certain individual requirements, however, are necessary for their winter treatment, the more important being the constant stirring of the soil on the surface of the pots, a temperature of about 50° by night, judicious care in watering and airing and, as spring advances, a light shading not only prevents the flowers from bleaching but increases the longevity and usefulness of the plants.

Primula Sinensis, the Chinese primrose, has perhaps received more general cultivation than any other variety. As a greenhouse plant it is desirable, but one of its principal charms is its adaptability to massing the plants together in one receptacle. Three plants from 5-inch pots placed in a 10-inch pan, or smaller plants from later sowings, are excellent for the home. Sphagnum serves as an excellent medium if placed firmly around the young plants.

Primula stellata: As a grower of this variety from its introduction, I consider it well merits a place in a collection. The improved forms with larger flowers covering a wide range of colors makes it far more desirable than when it first appeared. The habit of growth—tall, with frequent whorls of flowers—lends a certain grace which many admire.

Primula Forbesii, the baby primrose, is certainly a grand acquisition. Thrip seems to be its natural enemy during the summer months, but frequent applications of nickoteen will hold it in check until the cool weather, when it amply repays for the trouble. It is excellent in pots or pans for the home and one of the daintiest vases for parlor decoration can be arranged with the flowers, which last a long time. Should any plants remain as spring approaches equally satisfactory results may be produced by dividing them into small portions, potting off into small pots and thus avoiding the process of seed sowing, which is tedious and sometimes unreliable.

Primula obconica in its improved form, with large and fringed flowers in white, lilac and pink of varying intensity, makes excellent plants for the greenhouse and home, and also furnishes an abundance of fragrant cut flowers. If large plants are desired they can be grown a a second year by plunging the pots in a shaded position during the summer, but for general purposes plants from seed are more satisfactory.

Primula floribunda, when grown in

PRIMULA STELLATA, GROWN BY F. CANNING GARDENER TO S. T. BODINE.

pans, is suitable for home decoration. In small pots the plants add interest to a collection when arranged on shelves near the glass, where they flower a considerable time.

Primula verticillata should be grown by all lovers of these useful plants, its long tubular flowers and mealy foliage being very attractive. A damp, stagnant atmosphere is to be avoided with this variety to obtain the best results.

Primula Auricula one can hardly expect to grow as in Europe, but it is sufficiently interesting to deserve some consideration. The plants are grown from year to year and during the summer and autumn they are given sufficient water to keep their somewhat fleshy roots healthy. Repot in early winter, when they commence to grow.

It may be mentioned that all varieties when well established are benefited by occasional applications of manure water or fertilizer. FRANCIS CANNING.

PRIMULA OBCONICA GRANDIFLORA.

Keeping Quality of Carnations.

I am glad to see the wholesalers getting stirred up on the carnation matter. We retailers have been kicking and scolding and complaining for a long time about sleepy and split carnations, and little attention has been paid to our tales of woe. It is enough to make a man cuss his grandmother to receive a box of carnations in the morning, looking drowsy when unpacked, and ready to be put to bed by the middle of the afternoon.

There is something wrong with the carnations; they do not keep and an irreparable injury will be done to the flower trade unless some remedy is found. Where, in former days, our customers could keep carnations nearly a week, they say they will not now last for twenty-four hours. Some have quit buying them entirely, going back to roses. What is the matter, anyway? Various have been the theories advanced, some evidently practical, others not so.

I, too, have my theory. I believe the growers let them get over-ripe before cutting. Such is the rage for a big crop of big flowers with long stems that will bring a big price that they are left on the plants too long before cutting, and are three and four days old when the stores get them on their counters for sale, over-ripe, sleepy and ready to close up. It seems as if every grower who sends to the wholesale markets is forcing his plants at the highest temperature, to bring on big crops, which, when marketed are soft and flabby, with no substance, hence do not last long, stems two feet or more long, so slim and slender that they cannot hold up the flowers, too heavy for the support, so soft that if you look right hard at them they will break off.

Don't put the blame on the retailer's cooler, not mine at least, for it is a good one, eight feet high, the same width, and three feet deep, kept clean, and ventilated by the doors being opened many times every day, putting stock out and in. Over-ripe stock will go to sleep in it or on the counter, or in my window, which is cool.

My remedy may not be the best and only, but I think it would be well for all growers to cut their flowers before fully matured and keep them in a cool cellar or other storage room twelve hours before sending to market. Keeping the houses cooler would produce a less number of flowers but of finer quality and lasting. There would not be so many thousands to unload onto the fakirs at prices ruinous to the growers, but more good stock for the retail stores. I believe most of the country retailers—in cities and towns away from the large cities—do not want stems thirty and thirty-six inches long, but rather stout ones eighteen to twenty-four inches long, holding up a good-sized flower, not bursted or overgrown.

The growers who will recognize the wants of a large number of retailers for solid flowers, will be the ones to reap the benefits. The matter is entirely in the hands of the growers, who can and will produce carnations that will not become drowsy as soon as put on the retailer's counter. SENEX.

Floricultural Opportunities.

From a paper under this caption, read by J. B. Davis, of Orange, N. J., at a recent meeting of students in the horticultural department of Cornell University, we take the following paragraphs:

Within a few days a statement has been made by our government, the result of careful inquiry, that there existed 6,159 establishments engaged in floriculture as a business, and it has seemed to me that we might profitably spend the time to-night in a brief survey of the factors which go to make up this occupation. The most important man to-day in floriculture is the grower—not he who simply works a contracted area under glass in the growing of a few flowers, but the man who brings intelligence and preparation, united with his best efforts to this end. Quite near my home in New Jersey we have a few men who have merited attention not only as growers but as originators. Ernst Asmus, who introduced the Liberty rose, has an extensive plant in Hoboken; W. A. Manda, of South Orange, has named and introduced many new plants. His preparation for this work commenced at the bench and he raised himself by his own effort to the position that he fills to-day.

John N. May, of Summit, within a few months has given us the new rose, Mrs. Ames. Mr. May, I am told, commenced in a small way at the bottom of the ladder and worked his way up to his high position among the growers of our country. And there is last year's president of the Society of American Florists, who a while ago told us at Orange of the little shock-headed Irish boy who began with washing the pots and afterwards was set at weeding at Peter Henderson's greenhouses in Jersey City and is to-day a member of that firm.

Among growers but occupying a place of far different requirement, is the private gardener whose effort is given to some wealthy family. Men in such positions

command from $40 to $100 per month, with perhaps a small house and privileges. Many stand prominently before the floral world because of their skill as growers. Another representative grower is the man engaged in our public parks. A few years ago he was considered as a laborer and paid as one, but to-day he is upon a par with the grower elsewhere and receiving $75 per month.

The preparation of all these men formerly was at least three years before the bench before they were considered competent to bear the name of grower. To-day expectation is directed to the out-put of just such schools as we have here, where something far more thorough is imparted and with a purpose for fitting men for a still higher vocation, that of landscape gardener. If you will glance at the "want column" of our trade papers to-day you will find how frequently this is set forth, the demand for growers who also are equipped with this acquirement.

Among men who have filled the position of landscape gardener in a public capacity was Wm. McMillan, who raised himself from a private gardener to the position of superintendent of the Buffalo parks, by his own efforts, and subsequently became superintendent of the parks of Essex county, N. J. His successor, Wm. Manning, had preparation as manager of a large private estate. The demand to-day is not only for a more systematic but for a more scientific training, but the artistic quality must be born in the man and comes with a sincere love of nature. To-day no occupation offers so promising a future to young men who, with a taste for this work, will bring also the preparation now required.

Floral Casket Covers.

There has been some demand for flowers arranged to look like a mat, to lay over the foot of a casket. The wire worker has been employed in most cases to make something stiff and cumbersome for employing tinfoil, moss, toothpicks, and so forth, on which the florist wastes a number of flowers and much patience and is constrained only by a florist's modesty from labeling it: "This is a mat, no matter what it may resemble." The call for such pieces seems out of harmony with the general trend of floral fashions but of course we want to supply such designs when ordered. I find the one here illustrated, of carnations and Asparagus Sprengeri, the most satisfactory. It is made by laying strands of the asparagus diagonally across a table, hanging down on either side, arranging the pointed ends to hang down and joining the stem ends with a small piece of wire. Then lay another series of asparagus strings crossing the first series. Wire these together where they cross, making a mesh of three inches. You then have a green mat that is pliable and easily handled. It is an easy matter to decorate this in various ways with flowers. If an entire pall is wanted, slender strings of smilax used in the same way are preferable, as it is more limp and will fold more gracefully. Sometimes we carry a wreath from one side, which is easily extended more or less by use of vines, wiring the flowers on. C. B. W.

FLORAL MAT.

Plan for Greenhouses.

ED. AM. FLORIST:—I am planning to build a range of connected houses, 50x100, each house being sixteen feet eight inches wide from center to center of the supports for the iron gutters. The outside walls are eight feet high, the ridges fourteen feet, and each house contains four benches thirty-five inches wide and two walks thirty inches wide. The plan contemplates a center post, branching about three-quarters of the way up, one arm running to each side, forming almost a right-angle connection with the sashbars. Would the roof be substantially supported by the branching center posts and the gutter posts? Could the branches of the center posts be utilized to carry the purlins, the headers for the ventilator sash and the shafting to operate the ventilators? If so, what size of pipe should be used for the main column and its branches? Should the ventilators be opposite or alternate, it being proposed to ventilate about half the length on each side? What size should the ventilators be? Should they be hinged to the ridge or the header? Would you recommend any difference in the length of the spans, shorter to south, or vice versa? Hot water being used for heating, would three 2 inch pipes under each bench be sufficient to heat the range for rose growing? The location is the District of Columbia. Would the circulation be effective if a 4-inch main entered at the northeast corner, proceeded to the west end and thence along the end of the house, constantly on the up grade, feeding all the pipes as it passed? The 2-inch pipes would all run down hill to the east end of the range, where they would join another 4-inch pipe returning, still down grade, to the boiler at the northeast corner. Would this be a good style of house for rose growing?

J. W.

The system of posts described will answer, provided the posts in the outside walls will not give under the side pressure. The vertical posts should be 1¼-inch and the oblique braces should be 1-inch. The smaller size will answer for the purlins, which can be carried by the branching pipes. Whether the ventilating shafting can also be attached to these braces will depend upon the kind of ventilating machine used. It can be done with the Carmody and the Moninger machines, but it will be better to support the shafting for the Challenge and Standard machines by means of brackets fastened to the sash bars, although the shafting for these machines can be carried on the braces if desired. The ventilators should be about 72x30 inches and arranged alternately, with the hings at the ridge. For this style of house the dimension proposed will answer very well. The only change that suggests itself is to slightly reduce the height. The plan shows all the beds, except the two outside ones, to be double, or nearly six feet wide. This is rather too much for roses and unless the beds are divided lengthwise it would be better to reduce the width to four feet, with the outside beds thirty inches. By cutting down the width of the walks to from twenty to twenty-four inches, having at least one walk in each house of the greater width, the bench room will not be materially lessened. If no mains pass through the houses, ten 2-inch pipes will answer for the middle house and eleven or twelve for the others. A 4-inch pipe is not large enough to supply the three houses. It should be at least 5-inch. A better way would be to run a 4 inch flow, or two 3-inch, through each house. They would take the place of three 2-inch returns.

L. R. TAFT.

"Bodock, Which Never Rots."

Bodock, the wood mentioned on page 5 of this journal, issue of February 1, as the material used for posts by the Haskell Avenue Floral Company, Dallas, Tex., is what is known at the north as osage or mock orange. The tree is given as Maclura aurantiaca by Nicholson but Bailey puts it under the head of Toxylon. F. W. Beach, superintendent of the Haskell Avenue Floral Company, says that it does not seem to be generally known that this wood is particularly valuable for its quality of resisting decay when in the ground. Posts in the ground for years show no sign of decay. Says Mr. Beach: "Bodock is hard to get, but when you do get it, you have something which will stay with you. We have just closed a deal with a mill man in the southern part of Texas, for 200 of these bodock posts for our new houses. They are sawed 4x4 inches and nine feet long and are to cost a trifle over $1.50 each."

WITH THE GROWERS.

PETER REINBERG, CHICAGO, ILL.

If Peter Fisher, past master in the art of hybridizing, could see the sheet of bloom presented by the three houses of Mrs. Lawson carnation at the establishment of Peter Reinberg, it would afford him gratification certainly worth the trip from Indianapolis to Chicago, for it goes without saying that this Bay State wizard of the camel's hair brush will be on hand at the carnation society's meeting this month. Certainly there can be no complaint against Mrs. Lawson for lack of freedom of bloom, for there are few varieties on the mammoth Reinberg place which will give as many flowers per plant as will this largest of the pinks. The only possible objection to its behavior here is that the stems have not yet attained a length of more than fifteen to eighteen inches, which is just a little short of the present day requirement for a strictly fancy carnation.

Next to Mrs. Lawson, the most popular pink on the place is Guardian Angel, the sport from Armazindy. Next season it will be grown very extensively, displacing Mrs. Joost. The sport possesses all the good attributes of Armazindy, including freedom of bloom and length and strength of stem. It has been, probably, the most profitable sort on the place this winter. Mrs. Joost has been largely grown but is regarded as inferior to the sport in many qualities other than that of keeping.

There is one section of ten short houses given to Mrs. Leopold Ine, the sport from Tidal Wave. This is almost the color of G. H. Crane and is now in its third year here. It was planted by the tens of thousands, because of its freedom of bloom. The plants were rather small when benched, and it was rather late in producing its usual quantity of bloom, but now there is a literal forest of buds and the plants are blooming at a rate which insures the variety a permanent place, although next year it may not be planted so heavily. The flower is somewhat under the size required for a fancy bloom, but it has excellent form and the stems are good, although not very long. During the latter part of January, when Mrs. Lawson was selling at about $3 per hundred, Mrs. Ine was bringing $1.50, with an occasional bunch being sold at $2. Even in view of the splendid cut afforded by Mrs. Lawson, Mrs. Ine was the more profitable at those prices. Evanston is likely to give way to Mrs. Ine next year. Cerise Queen will have no showing.

G. H. Crane is doing very well, much better than in some nearby establishments. It is giving a fairly continuous crop and there is very little stem rot. Matt. Weber is the genius in charge here. The Marquis is giving a very fine crop now, but was rather late in getting down to business, as America has also been.

There is not a thing on the place which affords greater delight to the average visitor than the benches of Prosperity. It seems, to look at these plants, that the variety must be one of the most satisfactory, if not the very best, on the list. These plants are strong, clean, healthy, with many flowering shoots, and appearances of giving excellent cuts, flowers of remarkable proportions on long and heavy stems, although they are not strong enough to hold the flowers erect. But they say that the development of the buds is so exasperatingly slow that, even at the seeming high price at which the flowers sell, the crop is not a profitable one. Or possibly it would be more accurate to say that it is not so profitable as would be the crop from some standard sort occupying the same space. Prosperity is a great keeper.

There are acres of white carnations in the Reinberg place but there is not one which is completely satisfactory. Mr. Reinberg recently had an order for rooted cuttings for a new grower who told him to send what he thought was the best white. He sent Flora Hill and White Cloud, but neither quite fills the bill, and Norway is not fulfilling its early promise. It will, however, be planted more extensively next year and given a more thorough test. Bon Homme Richard is doing nicely, but the flowers are not so large as were the blooms exhibited by the originator last season. Neither are the stems so long, but they carry the flower nicely, and the bloom is well formed. It shows a trace of pink, not as much as in Armazindy, and it shows less and less as the flower attains perfection.

In one of the houses there are a few plants of Estelle and it will be benched more largely next year, as the color is very fine and the flowers large, though not well formed, to many tastes. Most of the new sorts for 1902 will be given a trial next year, but in general the planting of carnations will be reduced to make room for more roses.

Liberty has been so profitable a crop that the plantation of it will be more than doubled next year, making upward of 25,000 plants. This year they had a good crop in early fall and another just right for Christmas. At present the crop is off, but there is a promise for a heavy yield toward spring. The grafted stock has been in all respects superior to the plants on their own roots. The grafted plants started away earlier, have given longer and heavier stems and larger and better blooms, although probably yielding no more flowers, but bringing rather more money. There are now 10,000 Manetti stocks potted up for grafting for next season.

Another of the increases next year will be on Sunrise, which Mr. Reinberg thinks one of the most pleasing novelties He has done well this season on Mme. Chatenay and it will have larger place next year. There is now a splendid crop of Brides and Bridesmaids coming on and the quality of the stock has been excellent all season. Mr. Reinberg is fortunate in having the services of two very expert rose growers, the Collins brothers, one of whom is foreman of the place.

Through the larger part of the range American Beauty occupies the center benches, with teas on the outside benches. The success with Beauties this season has been rather greater than ever before, the crops being good as to quantity and superior as to quality. The stock throughout looks very clean and strong, and the cut has been fairly regular, although in January considerably below what they would like to have had it. There is an excellent prospect for spring the plants being full of good strong breaks and no blind wood.

In previous years this establishment has been affected with an unknown white worm of infinitesimal proportions which has been found in the Beauty buds and has caused the loss of thousands of dollars. Mr. Reinberg was never able to

A VASE OF BEAUTIES GROWN BY PETER REINBERG, CHICAGO.

secure authoritative information as to this pest, but in his own mind he came to the conclusion, after exploding numerous theories, that it came from the thrips, with which he and every other Beauty grower has had to contend. He started out early in the season to do battle with it, and has waged successful warfare, with insecticide known as "black death," of which he has used several hundred pounds, the cost being only 3 cents per pound by the barrel. This is a very fine black powder, principally used as an antidote for potato bugs, but injurious to all insect life. It is applied by dusting the plants and alternated with frequent applications of diluted Paris green has proven very effective. There is not a trace of the worm in the place this winter. "Black death" is an arsenical preparation, the same as Paris green, but it has the advantage that it does not harm the foliage.

In the propagating department they have already rooted and potted hundreds of thousands of cuttings for next year's supply. The houses here required for propagating are more than the space given to cut flowers in many a good sized establishment, for the demand for the next season will approximate about a quarter of a million plants, and the wholesale trade in cuttings and plants will aggregate many hundreds of thousands more.

For several years Mr. Reinberg has declared each fall that he was through building, but he has always been able to change his mind before spring It is another chapter of the same old story this year. When he started in at New Castle he said there would be no more building at the Chicago place, but now he has determined to add five Garland gutter houses, 26x265, covering the only vacant piece of ground in the sixteen acres which he has in the home place. Think of it! Sixteen acres of greenhouses for cut flowers! Six solid city blocks on Robey street!

Toronto.

CLUB HOLDS HIGHLY SUCCESSFUL ANNUAL BANQUET.—BUSINESS GOOD AND STOCK PLENTIFUL, EXCEPT ROSES.

Business has braced up considerably, several large weddings and funerals using up all available stock. Roses continue scarce, the demand being so heavy from outside points that most orders are only partly filled. What roses there are are mostly good. This is particularly true of Bridesmaids and Brides. Meteors are cut before they have properly developed and Beauties are only medium. Other lines are mostly plentiful, especially carnations, which continue of excellent quality. Nearly all bulbous stock is on the market and Harrisii are coming in more freely. Violets are very plentiful and of exceedingly fine quality.

The banquet given by the Florists' Club at Webb's dining parlors was well attended. The tables and room were most beautifully decorated by Mr. Collins and Mr. Goodier. At the officers' table was a large center mound of choice orchids, and on the other tables the decoration consisted of rare specimen plants and cut flowers. Mr. Chambers had the chair. Sister societies were responded to by President Saunders, of the Electoral District Society, and President Tyrell, of the Horticultural Society. Other guests were Mr. MacHutchinson, of New York; Wm. Fendley and Ed. Dale, of Brampton, and Mr. Webster, of Hamilton. H. G. D.

Chicago.

WEEK COMES IN WITH A HEAVY DEMAND.—ROSE SITUATION SOMEWHAT EASIER BUT PRICES DO NOT SAG.—CARNATIONS PLENTIFUL AND WHITE IN GREATEST DEMAND.—PLENTY OF BULBOUS STOCK.—RETAILERS DOING WELL.—THE GREEKS TO GO.—HIGHER RENTALS ASKED.—LARGE PARTY FOR CARNATION MEETING.—VARIOUS LOCAL DOINGS.

Last week closed with very dull business, but Monday brought a rush the like of which has not been seen in recent experiences. It was mostly out-of-town business, but the local retailers seem to be doing a very good business at present in the way of weddings and funeral work and small dinner decorations. There has not been much counter trade for the reason that the weather has been so cold that the shoppers could not be on the streets with comfort. While the demand for roses has increased, the receipts have also shown a gain in spite of the severe cold, and prices are remaining steady. There is a tale going the rounds of the market about a grower's rose cut averaging 18 cents last week, but there is doubtless a good deal of enthusiasm mixed into the narrative somewhere, for 10 cents to 12 cents is about the top price on ordinarily good shipping stock. One of the features of the market situation is that roses are averaging much better quality than at any time heretofore this season. Better stock could hardly be asked for, considering the market supplies in general. The same thing may be said of carnations, and on these prices are running up to $3 and $4 per hundred for extra fancy stock. Whites are moving rapidly and some dealers report them decidedly short of the demand, but there are plenty of pink and red everywhere, so many that they hang fire in the cold weather. There is bulbous stock in all the wholesale houses, including everything from callas, Harrisii, freesias, tulips, Romans, Paper Whites and daffodils to the finest lily of the valley the market has seen in a long time. A man can get pretty nearly anything he wants in the line of valley at a very reasonable price. The spikes from the freshly imported pips are very good, although somewhat deficient in foliage, and there are still good supplies from cold storage. The biggest valley ever seen on the market is that from Klehms' Nurseries, from home grown pips, but this is only bringing $4 to $5 per hundred. There are all kinds of violets in abundant supply, but only the very best are moving at any kind of a pace. It takes moderate weather and the street salesman to move the low grade of violets. Smilax is very plentiful, but there is little adiantum to be had.

There is much perturbation in the market over the action of the city authorities in ordering the street salesmen to discontinue business. Even those of the gentry who have stands within the three-foot line from the buildings have been ordered to quit by February 15. The effect of this move on market conditions cannot be observed as yet, for street men can do little business in zero weather, but the big producers and wholesalers are fearful of the results when the spring rose cut comes on. In the meantime the Greeks are looking for vacant stores in the neighborhood of certain down retailers who have been active in pressing this matter with the city authorities.

In the wholesale markets they are beginning to think about leases again, and the general tendency of rents is upward. Amling has just renewed for a good term at a slight advance, but the Kennicotts' talk of moving unless the landlord recedes from his demand for a practically doubled rental. The property owners in the neighborhood have the idea that Marshall Field's splendid new building, now nearing completion, will greatly enhance real estate values in the neighborhood.

E. F. Winterson has received a letter from William Billingsley, of Indianapolis, urging that the Chicago party at the carnation meeting make its arrangements to remain for the banquet, which will be given by the Indianapolis committee on the evening of Thursday, February 20. Mr. Winterson is figuring on a party of twenty-five from Chicago, leaving here at 8:40 p. m. February 18. Peter Reinberg is one of those who will attend.

At the meeting of the executive committee of the Horticultural Society of Chicago, February 6, three committees were appointed, one to recommend working committees for the next exhibition, one on location and another to revise and get out the premium list at once. The prospects are favorable for securing the new hall which is to be added to the Art Institute the coming summer, for the next show.

E. C. Amling calls attention to the fact that on February 12 and 22, Lincoln's and Washington's birthdays, there will be but two mail deliveries in the business district, leaving the postoffice at 8 a. m. and 10 a. m. After the later hour it will be impossible to secure mail even by going to the postoffice. Out of town buyers should bear this in mind.

Fire in the Sanford Building, Randolph street, February 7, put Kennicott Bros. and E. C. Amling to considerable inconvenience through the accumulation of water in their basement stores and offices.

The city council has given a permit for a sixteen-story building at the corner of State and Monroe streets, so that A. Lange will likely have to seek new quarters after all this spring.

As a rule the wholesalers report better business in January than a year ago, largely due to good prices during the latter part of the month.

Henry Wittbold, of the George Wittbold Co., has the sympathy of the trade in the death of his wife, who was laid at rest on Monday.

E. Asmus & Co., doing business as florists at Evanston and Kenmore avenues have been incorporated with a capital of $2,500.

Weber Brothers are sending J. A. Budlong some of the finest Bride and Bridesmaid roses ever seen in this market.

John Sterrett, of McKellar & Winterson's, is recovering from an illness which threatened pneumonia.

Klehms' Novelty tulips are beginning to come in, and they are good for so early in the season.

Visitors: H. M. Jensen, McHenry, Ill.; A. Warlmont, Aurora, Ill.; J. R. Falkenstein, Naperville, Ill.; H. J. Millatt, Kansas City, Mo.

Newport, R. I.

The members of the Newport Horticultural Society gave their eighth annual ball at Masonic Hall, February 4. The attendance was not as large as in former years, but enough couples were present to make dancing comfortable; and while the ball probably was not a financial success, it certainly was one socially. The following committees had charge: J. K. Sullivan, floor director; Col. Herbert Bliss, assistant; Colin Robertson,

John Alexander, Luther Fulton, Tom Fieldhouse, John H. Sullivan, J. H. Barney, Jr., aids.

Reception Committee—A.K. McMahon, B. F. Tanner, James Boyd, Alexander Fraser and John Bluck.

Committee of Arrangements—Richard Gardner, Charles D. Stark, Louis Ziegler, William F. Smith and Andrew S. Meikle.

J. J. B.

New York.

WEEK PROVES DISAPPOINTING IN A TRADE WAY.—ROSES EQUAL TO ALL REQUIREMENTS.—BEAUTY THE ONLY SHORTAGE.—PLENTY OF OTHER ITEMS.—VALLEY IN OVERSUPPLY.—VARIOUS TRADE AND PERSONAL DOINGS.

There is a very general complaint of dull business this week among the wholesale flower marts, and the inactivity in the retail stores, usually so lively the week preceding Ash Wednesday, sufficiently indicates the reason for the complaint. It was expected, and with reason, that this week would develop a good, steady demand, but it has failed for once. The store windows are filled with fine azaleas, ericas and other blooming plants, but the sales in this line are also light at present. Roses have dropped a few points in value since last report, and a further decline may be looked for in the near future. This is not so applicable to American Beauty, which is in light supply, and does not accumulate as yet. Carnations remain about at a standstill, with no noticeable change in supply, quality or demand since last week. Violets show no improvement. Sales of these in quantity are made at very low figures to unload. Bulbous stock is now becoming unwieldy. The number of growers of this specialty seems to have increased, and all the old concerns are cutting heavily. Lily of the valley is very abundant, prices having been cut nearly in half, and to clear it out daily is an impossibility. Sweet peas are now sufficiently plentiful to be listed in regular daily stock. There are two ways to bunch sweet peas. The grower who cuts a few sprays and tips of foliage with the tendrils and puts them among his flowers gets enough more every time to pay for it. The clumsy manner in which some really nice blooms are bunched is enough to make one feel sad.

David Clarke's Sons are preparing to remove in the near future to a very spacious store which is being fitted up for them in the big new Stokes building on Broadway, near Seventy-second street.

John Scallen's is another old-time establishment that is about to be demolished. Mr. Scallen will remove on May 1 to temporary quarters until the new store on the old site is ready.

J. H. Small & Sons have been large buyers this week in this market for flowers which they have been sending to Washington for the Hay-Whitney wedding.

Wm. Sampson has rented space from Moore, Hentz & Nash at the New York Cut Flower Company's rooms for a wholesale stand.

The Misses Phelps-Stokes have given $3,000 to the New York Botanical Garden for the investigation and preservation of native plants.

The annual ball of the Brooklyn Florists' Club is announced to take place at Turn Hall, 351 Atlantic avenue, on March 17.

Albert Wadley is reported to be steadily improving now.

Boston.

TRADE TAKES ON NEW ACTIVITY.—BEAUTIES POOR.—CARNATIONS DOING WELL.—EXTRA QUALITY FLOWERING PLANTS ARE VERY ABUNDANT.—NOTES OF PERSONAL AND OTHER INTEREST.

After a little period of slackness, business has picked up somewhat this week. Out-of-town as well as local dealers seem to feel the improvement, judging by the increased call on the wholesalers for shipping orders. Roses have not come on as fast as was anticipated and this favors a more healthy market and more stable values. American Beauty is decidedly off crop generally. The blooms coming in are mainly from side shoots and stunted wood, the blooms averaging inferior. Carnation growers are happier than they were. This week prices are better and there is no difficulty in finding a market for all the good material that comes in. Bulbous flowers multiply rapidly now and, although of nice grade generally, move sluggishly, no fancy prices being obtainable at present on any grade.

Plants of extra good quality are more abundant in the store windows than ever before at this season. Azaleas are especially fine and make a striking display. There is no end of daffodils and other flowering bulbs in pans and among the prettiest things are Lady Hume Campbell violets well furnished with bloom.

W. D. Philbrick, for many years a violet grower at Newton Center, died on January 24, aged 67 years.

J. L. Heilbrun has opened a store on Mason street under the title of Ye Colonial Florist.

H. H. Hunnewell, now over 90 years of age, is in feeble health.

Visitor: Chas. Loechner, representing Suzuki & Iida, New York.

Washington.

WEATHER UNUSUALLY SEVERE.—SMALLS USE NEW ROSES IN A HANDSOME DECORATION.

J. H. Small & Sons had the decorations for the Westinghouse dinner and cotillion, last Friday night. The large mansion was tastefully decorated. The boutonieres were made of dendrobiums and lily of the valley. The rose used for the corsage bouquets for the first time in Washington was a beautiful shell pink, No. 19, and known in New York as Mrs. Westinghouse, grown by Benjamin Dorrance, Dorranceton, Pa. For the same decoration some of John N. May's new rose, Mrs. Oliver Ames, were also used, making a fine contrast.

The American Rose Company supplied their Ivory rose in large quantity for the lavish white rose decorations at the wedding of Miss Helen Hay, daughter of the Secretary of State, to Payne Whitney, February 6. It was quite a coincidence that Henry Clews, Jr., one of the ushers, is the son of Mrs. Henry Clews of New York, who subscribed the $50 prize to the American Rose Society for the best fifty white roses, and which was won by the American Rose Company with their Ivory at the Waldorf-Astoria, New York, last March.

Last Tuesday we had the first heavy snow this winter, followed for nearly a week by rain, sleet and cloudy weather, making it very trying for the cut flower growers, as well as the store people. The heavy snow and ice did considerable damage to some greenhouses. F. H. Kramer sustained a loss of about $50 by the ice sliding from one house and breaking much glass on the opposite house.

The American Rose Company last week shipped 10,000 strong plants of Ivory rose to their general agent, Edwin Lonsdale, preparatory to distribution April 1.

Indianapolis.

PLANS WELL UNDER WAY FOR THE CARNATION MEETING.—THE COMMITTEES.—THE PROSPECTS BRIGHT.

The representatives of the Florists' Association of Indiana held a final meeting before the carnation convention on the evening of February 4. The time was devoted to completing arrangements for the convention and everything may be said to be fairly well under way. The reception committee wishes to impress upon the visitors their request that Robert McKeand, 132 E. Market street, be notified of their time of arrival. Mr. Mr. McKeand's assistants on the reception committee are F. B. Alley, Adolph Baur, Fred. Huckriede and W. W. Coles. The committee on entertainment is composed of E. G. Hill, of Richmond; J. A. E. Haugh, of Anderson, and William Billingsley, Ed. Bertenmann, and Herman Junge, of Indianapolis. They are planning a banquet for the visitors on the evening of February 20 and expect to make it a most elaborate affair. It is now thought that the attendance will be 200 or more from outside the state and it is figured that the exhibition will be the best in the history of the society. Both the meetings and the flower show are to be held in the German House, the west half of that building having been engaged for the two days. Ed. Bertermann is working out a scheme of elaborate floral decorations, in which the exhibits of carnations will find a handsome setting. The committee in charge of the exhibition is J. S. Stuart, Fred Lemon, E. A. Nelson, John Bertermann and John Hartje. There are reports of exhibits coming from New England and from as far west as Colorado.

H. J.

Columbus, O.

TRADE FAIR BUT RETAIL PRICES ON ROSES TOO LOW FOR PROFIT.—A VARIETY OF JOTTINGS.

Business is very good, with prices satisfactory on all stock but roses, the best of these selling mostly at $1.50 per dozen, rarely at $2, which is too low for the dealer who has to pay from $10 to $12 per hundred for good stock. Hyacinths, daffodils and tulips are coming in heavily but so far there has been no surplus. Lilies are scarce as yet, although a few have made their appearance.

Geo. L. Miller, of Newark, O., stopped here on his way home from Cleveland. It was plain to be seen that George ran against something valuable while in the northern part of the state but it is too soon for him to make it known.

The cold wave of this week was accompanied as usual with a lot of telephone calls as to the treatment for frozen house plants.

S. S. Skidelsky and Ernest Ashley, of Philadelphia, were among the callers this week.

J. R. Hellenthal has a house of fine Ramblers promising well for Easter.

CARL.

CHAMPLIN, MINN.—Irving Kimball is preparing to erect a range of houses covering 100x400 square feet.

AMERICAN FLORIST CO., Chicago.

PRICES on window glass have stiffened somewhat as a result of a ten per cent advance in the wages of workmen.

THE Kansas City flower show of 1902 will be held November 3 to 8, with F. J. Taggart general manager and John Thorpe superintendent.

THE week has cut into the coal piles amazingly, for zero weather and high winds have prevailed over the greater portion of the country.

WHOLESALE plant trade is reported generally dull for the past two weeks, due to the severe cold, making shipments more or less hazardous.

THE manufacturers of greenhouse building materials say that they have never experienced anything like the rush of orders which is on at present.

THE American Rose Society wisely sends out with its prize schedule a substantial printed tag to be used on shipments of plants, flowers, etc., intended to reach the official in charge of the exhibits.

Society of American Florists.

The various state delegations at the Buffalo convention having failed to express any choice for their respective representatives, President John Burton has appointed the following named gentlemen to serve as state vice-presidents for the year 1902, and they have accepted:

California, H. H. Lilienthal, San Francisco.
Colorado, J. A. Valentine, Denver.
District of Columbia, Peter Bissett, Washington.
Florida, E. N. Reasoner, Oneco.
Illinois, (north), Edgar Sanders, Chicago.
Illinois (south), Geo. A. Kuhl, Pekin.
Indiana, Geo. B. Wiegand, Indianapolis.
Iowa, W. A. Harkett, Dubuque.
Kentucky, A. R. Baumer, Louisville.
Maine, Hans Nielsen, Woodfords.
Maryland, Chas. L. Seybold, Baltimore.
Massachusetts (east) J. A. Pettigrew, Boston.
Massachusetts (west), H. P. Wookey, Stockbridge.
Michigan, Robt. Flowerday, Detroit.
New Hampshire, Bernard Morris, Portsmouth.
Missouri, Chas. Juengel, St. Louis.
Nebraska, Lewis Henderson, Omaha.
New Jersey, Jos. B. Davis, Orange.
New York (east) A. H. Langjahr, Brooklyn.
New York (west) Thos. Mansfield, Lockport.
North Carolina, Jas. M. Lamb, Fayetteville.
Ohio (north), Lewis Ullrich, Tiffin.
Ohio (south), A. Sunderbruch, Cincinnati.
Pennsylvania (east), Geo. C. Watson, Philadelphia.
Pennsylvania (west), Wm. Loew, Allegheny.
Rhode Island, Louis J. Reuter, Westerly.
Vermont, Geo. H. Mass., Woodstock.
Virginia, F. A. Whelan, Mt Vernon.

Indianapolis Hotels.

The following are the hotels which the Indianapolis reception committee recommends to those who will attend the approaching convention of the American Carnation Society:

EUROPEAN PLAN.

Lorraine, single, per day	$ .75 to $1.00
" double, per day	1.00 to 1.50
Oneida, per day	.50 to 1 00
Lorette, per day	.50 to 1.00
Denison, per day	1.00 to 3.00

AMERICAN PLAN.

Spencer, per day	$2.00
Circle Park, per day	1.50
Lorette, per day	1.50
English, per day	$2.00 to 2.50
Denison, per day	2.00 to 5.00
Grand, per day	2.00 to 4.00

Greenhouse Building.

Dunkirk, N. Y.—F. B. Kinner, one house.

East Mansfield, Mass.—Vickery Bros., one house.

Plymouth, Pa —Wm. G. Nelson, house 16x132.

Helena, Mont. — Mattie Miller, three houses 20x80.

Champlin, Minn. — Irving Kimball, range of houses.

Austin, Minn.—A. N. Kinsman & Co., two houses.

Rockland, Mass.—W. B. Arnold, two houses 25x100.

Mt. Holly, N. J.—R. Beyer, one house.

Doylestown, Pa. — B. K. Hedrick, one house.

Williamsport, Pa.—Pennsylvania Railroad Company, one plant house.

Berlin, Conn.—A. A. Welden, one house.

Lawrence, Mass. — A. H. Wayland, three houses.

Louisiana Purchase Exposition.

Frederic William Taylor, chief of agriculture, and acting chief of horticulture and floriculture at the Louisiana Purchase Exposition, was among our visitors this week and expressed himself as highly pleased with the present outlook for the World's Fair at St. Louis. He is at present looking over the field for material and suggestions which will contribute toward making the displays in his departments the most representative and complete which have been brought together to date. Mr. Taylor's past experiences in a similar capacity must necessarily be of substantial service to him in his present position, but he is quite willing and anxious to receive practical pointers from men in the trade who are competent to advise with regard to the necessities of the occasion. All correspondence on this subject should be addressed to Frederic W. Taylor, World's Fair, St. Louis.

Asters For Early Cutting.

ED. AM. FLORIST:—Please tell me what are the best asters in the several colors, white, pink, lavender, red and Daybreak, to grow outdoors for cut flowers for the wholesale market? What is the best time to sow the seed and what soil is best adapted to their requirements?

A. L. S.

The earliest of all asters for market purposes is the Queen of the Market, which is sold in about six or seven distinct colors. The early Parisian is earlier still, but produces very few flowers and is not very profitable, except for forcing under glass. Early asters for outdoor growing ought to be sown at once to get good, strong plants to set out early in May in Boston latitude. If the ground has been in cultivation for some years a liberal application of slaked lime will be very beneficial in warding off the rot to which asters in old soil are very liable. Light land is preferable to that of a heavy texture, especially for early varieties. Last year we made a trial of California and imported aster seed and we were quite surprised at the results, the California plants being more vigorous and comparatively free from disease, with no signs of the chlorosis (or the yellows) which is so prevalent in late asters of the Semple class, owing probably to the seed being more mature and raised in a dryer climate. But more care will have to be used by California growers in selecting the plants for seed as the flowers were far inferior in quality to those from plants from European grown seed and the colors were badly mixed.

DENYS ZIRNGIEBEL.

OBITUARY.

THOMAS J. WINTERS.

Thomas J. Winters, of Harrisburg, Pa., florist for the Pennsylvania Railroad Company for the past quarter of a century, died January 31, from cancer of the stomach. Mr. Winters was well known along the line of the middle division of the Pennsylvania railroad, where he laid out the flower beds and kept in order the gardens about the stations. Deceased was aged about 64 years, a member of the S. A. F., and is survived by a wife and seven children.

JAMES COMLEY.

The news of the death of this eminent gardener comes with a terrible shock to a host of sympathizing friends. While walking among the beautiful trees on the Hayes estate, at Lexington, Mass., which had been under his care for so many years, he was stricken with apoplexy and expired instantly. Thus is removed a central figure in Boston horticulture, one of the renowned coterie of expert gardeners who have wielded a powerful influence in their profession for nearly half century and have helped make the exhibitions of the Massachusetts Horticultural Society famous all over the country.

Mr. Comley had charge of Oakmount, the extensive estate of F. B. Hayes, from the time it was laid out until after the death of the younger Mr. Hayes, when it was disposed of. He gathered there a great variety of rare and beautiful trees and the rhododendron collection under his supervision grew to be one of the finest in America and the annual show of these grand flowers became noted far and wide. As manager of this estate it

devolved upon him to arrange and conduct the entertainment given by Mrs. Hayes to the Society of American Florists at the time of the Boston convention in 1890. How well he performed this duty the 800 visitors on that happy occasion know. This was but one of very many events when Mr. Comley's rare qualifications as a host were demonstrated. At his own home there was at all times a hearty welcome for the craft and whether the party was small or large his bounty was always equal to the occasion.

Mr. Comley came to this country from England at the age of 20 years, with the advantage of an apprenticeship under John Spencer, on the estate of the Marquis of Lansdowne. He had an especial fondness for rare and new things and with the instinct of the true gardener loved a plant for itself rather than for its money value. He was lavish in his displays at the weekly exhibitions of the Massachusetts Horticultural Society and at the close of the show the flowers were bestowed on all comers as long as they held out. Since the closing of Oakmount he has devoted his time to a small range of greenhouses as a commercial venture but during the past year infirmities have crowded upon him, the most serious being the almost total loss of sight, and he has felt keenly his inability to participate in the social activities of his old associates.

His age was 67 years. His mother is still alive in England. He leaves a widow, two daughters and four sons, all of the sons being engaged in floricultural pursuits. The funeral on Monday, February 3, was attended by about thirty gentlemen from the Society of American Florists, Massachusetts Horticultural Society, Horticultural Club and Gardeners' and Florists' Club of Boston, the two latter contributing superb floral tokens.

CHARLES CONNON.

Charles Connon, of Webster Grove, Mo., who died January 25, was born in Edinburgh, Scotland, more than seventy-five years ago and learned the gardening craft under the careful parental eye. His father was a minister of the gospel, besides being a nurserymen, and from him his son derived that love for the church which has borne so marked an influence on his whole life. He came to America fifty years ago and for forty-five years has resided in the vincinty of St. Louis, most of the time at Webster Grove. He was one of the oldest florists in his section of the country and was most highly esteemed by all his fellow craftsmen. Some twelve years ago he suffered a severe illness, with pneumonia, from the after effects of which he never fully recovered. It was on January 17 that he contracted a severe cold which added to the other complications and brought on the end, despite the very best of medical attention.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of ten cents a line (six words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

Every paid subscriber to the AMERICAN FLORIST for the year 1902 is entitled to a five-line WANT ADV. (situations only) free, to be used at any time during the year.

SITUATION WANTED—By a rose, carnation, violet and plant grower; 25 years' experience. References furnished. B P, care Am. Florist.

SITUATION WANTED—By a young man, as helper in general greenhouse work, especially roses; 5 years' experience. Address M H A, care American Florist.

St. Louis.

CHANGEABLE WEATHER KEEPS GROWERS ON THE ALERT.—ROSES SCARCE, BUT OTHER STOCK PLENTIFUL.—BULBOUS MATERIAL MOVING WELL. — VARIOUS NOTES.

The weather is very severe of late and has made a wonderful change in the market. The temperature and winds have been very changeable and have caught several growers half asleep. There are very few good roses to be had, except when they are sent from a distant point. It has been that way for the last two weeks. There are not near enough roses sent in to supply the demand, although good prices are received. And Beauties, too, are hard to get. Carnations are the leading flower in these rose shortage weeks, and even in these there is a shortage of white. Some very fine White Cloud, Marquis and Mrs. Lawson are to be had at $4. Lily of the valley is quite plentiful, but some very fine stock is to be had at $6. Violets are coming in quite lively of late, but not any more than can be used. Tulips are beginning to cut quite a figure and a large number are used daily, especially the white, and luckily there are more of these sent in than of any other.

February 13 is the next meeting of the St. Louis Florists' Club and the annual carnation show will be held in Odd Fellows' Hall on Olive street. Some very fine flowers are expected and several good papers are promised. Home growers are asked especially to exhibit their good blooms of any variety.

The retail trade is very good of late and all report brisk business. Geo. Waldbart is getting in some exceptionally fine roses, and is also having quite a run on plants, especially azaleas. Charles L. Connon is also having good business.

John Burke reports good trade at both stores, but his time is principally taken up by decorations and funeral work.

R. J. M.

LINCOLN, MASS.—Charles Hunt is building a greenhouse.

ORANGE, N. J.—Samuel Glascow, assistant to John Hayes on the O. D. Munn place, was accidentally asphyxiated by gas Monday. He was a most promising young man.

WAUWATOSA, WIS.—A. Klokner, of Milwaukee, has purchased the land 195x227 at the southeast corner of Seventh and Vliet streets for $3,200 and will erect a range of greenhouses.

THE SEED TRADE.

AMERICAN SEED TRADE ASSOCIATION.

J. E. NORTHRUP, Pres.; S. F. LEONARD, Vice-Pres.; S. F. WILLARD, Wethersfield, Conn., Sec'y and Treas.

Twentieth annual convention, Twin Cities, Minn., June, 1902.

VISITED CHICAGO: George A. Tilton, of A. Tilton & Son, Cleveland, Ohio.

VISITED NEW YORK: E. M. Parmelee, of the J. H. Allan Seed Co., Picton, Ont.

C. S. CLARK, of Wakeman, Ohio, will soon build an addition to his seed corn warehouse.

C. P. BRASLAN and wife, of San Jose, Cal., are registered at the Waldorf-Astoria hotel, New York.

THE first large contingent of Dutch bulb drummers arrived at New York, February 5, on the S. S. Statendam.

VISITED ST. LOUIS: A. J. Brown, Grand Rapids; A. Haven, South Haven, Mich.; Joseph Rolker, New York; Wm. Trillow and A. Ringier, Chicago.

AT Racine, Wisconsin, this year 2,000 acres of cabbage will be grown in a district seven miles square. The seed is mostly sold by men who buy the cabbage crop when matured in the fall.

French Bulb Prices.

The French bulb prices just being fixed for the 1902 crop show an advance to the growers of from five to eight francs on leading items. The greatest percentage of increase is shown in the price of narcissi. It is believed by most dealers that the growers' syndicate will maintain the schedule as it did last season. During the past ten years white Roman hyacinths, twelve to fifteen centimeter size, have three seasons been above present rates, two times ten or twelve francs higher and once about three francs higher. During the other seven years the prices have been from fifteen to thirty francs lower than for 1902, one year selling as low as forty francs.

Farmers' Institute for Philadelphia County.

The programme for the Philadelphia County Farmers' Insitute, which has just been completed, is something of a departure from the usual wheat, corn and potato programme of the ordinary farmers' institue as now conducted. James Boyd, of Haverford, will give a talk on "The Best Old-Fashioned Flowers for the Home Garden," a subject on which he is an enthusiast, as any one can attest who has ever had the pleasure of seeing Mr. Boyd's fine collection at Haverford.

Joseph Meehan's subject is "The Best Shrubs and Trees for a Suburban Lawn." Mr. Meehan is a brother of the late Professor Thomas Meehan and is a famous nurserymen and botanist, like his celebrated relative. No one living is a better authority than Mr. Meehan on the subject chosen for him.

Jno. B. Lewis, the Philadelphia city forester, will give a timely talk on "How and When to Abate the Caterpillar Pest." During winter, when the trees are bare, much can be done to clear off nests of coming generations of worms, and Mr. Lewis will tell how best to go about it.

"The Mushroom as a Profitable Winter Crop" has been assigned to Joseph Kift, Jr., of West Chester, a grower of this toothsome esculent who has had great success during the past few seasons, and who has introduced several new ideas in mushroom house construction of a practical and up-to-date character.

The leading feature of the afternoon session will be the appearance of Secretary of Agriculture Hamilton and Dairy and Food Commissioner Cope. Mr. Hamilton will answer the question, "What is the Department of Agriculture doing for its important sub-divisions of horticulture, floriculture and forestry?" Mr. Cope will stand up and tell "The Truth about Oleo!" Both gentlemen have live and timely topics and everybody will be interested.

Other speakers are Hon. Thomas J. Phillips, "Commercial Fertilizers and their Uses;" Dr. M. E. Conard, "The Importance of Dairy Hygiene;" Prof. Wells W. Cooke, "Care and Feeding of Dairy Stock;" Calvin Cooper, "The Sprayer a Help to Fruit Growers;" S. R. Downing, "Improvement of the Soil."

James Cheston, Jr., the famous poultry and pet stock amateur, whose farm at Chestnut Hill is popularly supposed to be fenced with blue ribbons and where gold medals hang on every tree, is booked for a talk on "The Educative Value of Poultry Shows."

Lewis M. Haupt, civil engineer, will give an illustrated lecture on good roads.

The Institute will be held at Horticultural Hall, Broad and Locust streets, February 19, afternoon session commencing at 2 p. m., evening session commencing at 7:30 p.m. Edwin Lonsdale, chairman of the committee for Philadelphia county, will preside, and questions for the speakers to answer may be mailed to George C. Watson, Juniper and Walnut streets, who will also furnish complete programme of the exercises to any one desiring same. The meeting is one of the department's regular course and is held under the auspices of the Florists' Club of Philadelphia and the Pennsylvania Horticultural Society, free to the public, everybody welcome.

G. C. WATSON.

GRAND RAPIDS, MICH.—C. W. Scott, representing Vaughan's Seed Store, was a visitor this week.

NEWARK, N. J.—W. S. Manning, superintendent of the Essex county parks, is ill with appendicitis.

UTICA, N. Y.—W. A. Rowlands has let the contract for two more large greenhouses to be added to his plant.

BRISTOL, N. H.—Smith D. Fellows sold his range of 12,000 feet of glass to his brother, Leslie H. Fellows, who has removed and will re-erect them at Hyde Park, Mass.

HENRY A. DREER,

714 CHESTNUT ST., PHILADELPHIA, PA.

THE NURSERY TRADE.

AM. ASSOCIATION OF NURSERYMEN.

R. C. BERCKMANS, Pres.; R. J. COE, Vice-Pres. GEORGE C. SEAGER, Rochester, N. Y., Sec'y.
Twenty-seventh annual convention, Milwaukee, Wis., June, 1902.

THE Midland Nursery Co., Des Moines, Ia., has been incorporated by O. H. Robinson, W. C. Ballard and W. E. Chapin, with $25,000 capital stock. It is the purpose to largely extend the business.

Notes of the Parks.

The South Parks Board of Chicago has accepted sites for about a dozen small parks, largely in the neighborhoods where workingmen make their homes, which will be acquired and developed at an expense of about $600,000.

The West Park Board has voted to issue bonds for a million dollars for the purpose of acquiring sites for small parks. This project has the support of the people but recent increases in salaries and the addition of names to the pay roll has brought much newspaper censure upon the board. Wm. Cooke has been elected general superintendent.

Walter Hubbard of Meriden, Conn., has donated to the city a tract of land on both sides of Harbor Brook, known as Brookside, and at his own expense built roads, walks and bridges, and otherwise beautified it. Mr. Hubbard has in the past been a very generous donor of park reservations for Meriden. Hubbard Park, which was largely a gift from this public-spirited gentleman contains about 1,000 acres.

The Appalachian Mountain Club and Massachusetts Forestry Association are raising by subscription a fund of between $2,000 and $3,000 for the purpose of purchasing the giant pines in Carlisle and the ten acres of ground on which they stand and opening the tract for visitors. These trees are estimated to be over two centuries old and are the finest specimens now left of the original growth of white pine which once covered New England.

Trees and Shrubs.

Considering the advanced season and severe weather behind us, a number of tender plants can still be saved from injury by frost if attended to immediately. The changeable weather of late winter and early spring does more damage to a majority of plants than all the cold of winter, and it is, therefore, during March and part of April that protection in the way of straw, leaves, canvas or boards is needed more than at any other time. Indeed, early covering will often attract mice to this warm abode, which will feed on the plants and do more damage than winter cold.

The right time to cover up is as soon as the ground is frozen solid. Tender plants in a sunny situation are more liable to be damaged by frost than if protected from the noonday sun. Often a board to keep off the direct sun is all the protection needed. This is especially so with evergreen plants. A heavy mulch around the tree or shrub to keep the frost away from its roots is also very beneficial, particularly to such species as hold on to their foliage during winter. Here the constant evaporation, increasing with the rise of the sun, needs continuous support in the way of water absorbed by the roots and through the laws of radiation transmitted to the leaves. This will explain why it is beneficial to keep the frost away from the roots of evergreens, especially in their early age, when their roots have not penetrated the soil to such depth as to be free from frost.

Nature offers protection to its children in the way of undergrowth, leaves or in the pine and spruce forests, a thick layer of needles that frost rarely penetrates. This will account for the fact that plants transplanted from the woods will winter kill in the exposed border. This I have found to be the case with the beautiful cardinal flower, Lobelia cardinalis. But is this any wonder? At the present writing there is 12° to 18° of frost on open lands and none in the woods.

Tree pruning can be carried on during nice weather. Trees in which the sap commences to run early as, for instance, soft maples, should be attended to immediately. Many object to tree pruning during the winter months, claiming the impossibility of detecting dead wood. This is all bosh. The experienced gardener never misses a dry limb. But the amount of bad pruning done perhaps tends to show that there is a scarcity of the latter.

The pruning of shrubbery is better left until spring or midsummer, according to the varieties that need pruning.

The winter months are the proper time for fighting some of our worst enemies in the way of insects. Egg masses and cocoons can be found in the crevices of the bark of old trees or hanging to the limbs. On small places hand picking is the most satisfactory remedy. Where they are out of reach a simple appliance by which to exterminate them is found in tying a rag at the end of a long pole. This rag is dipped in creosote and applied to the egg masses. Where the oyster shell bark louse is present, give the infested part a good wash of kerosene emulsion

W.

Handicap Bowling Tournament.

On Lincoln's birthday, February 12, the Florists' Club of Philadelphia announces a handicap bowling tournament open to members only, in celebration of its team having won the championship of Philadelphia in the academy tournament. The prize money won by the team has been doubled by the club and eight individual trophies are now offered. The tournament will commence at two p. m. and continue during the afternoon and evening. Light refreshments will be served. The following are the entries, with the handicap allowed to each figured on records for six months:

Player	H'd'p.	Player	H'd'p.
Johnson	scratch	Baker	19
Mooney	3	Watson	19
Dunham	5	Gibson	19
Harris	7	Graham	20
Moore	8	Reibenack	20
Moss	8	Holmes	20
Kuestner	10	Burton	20
Connor	12	Craig	22
Starr	12	Sweet	22
Allen	12	Hallowell, W.	23
Kift	12	Leaver	23
Archer	13	Dunlap	24
Westcott	14	Gill	24
Eimerman	16	McElroy	26
Polites	16	Falck	26
Bonsall	17	Farrell	26
Rust	18	Koenig	35
Adelberger	18	Hanna	45
Anderson	18	Hallowell, C.	50

The committee having the tournament in charge, George M. Moss, George C. Watson and John W. Dunham, has made the following special rules:

1. One other member must be bowling when the game is rolled and candidate must declare his intention that the game is for prize before he commences.

2. Any Florists' Club member not also a member of the bowling club or the teams that competed at the academy must pay an entry fee of 50 cents to the committee before commencing the game.

3. All games to be run off under the rules of the American Bowling Congress.

William Falck has been appointed official scorer. G. C. WATSON.

At New York.

F. W. Lentz, secretary of the bowling club, has not been able to participate in the game since he has had a "game leg" as the result of a collision with a trolley car. There were but four members present February 3 and Mr. Taylor was allowed from twenty to fifty pins from the other crack bowlers, because he is not in their class. But he surprised them a few times by beating them out and the scores were as follows:

Player.	1st	2d	3d	4th	5th	6th
Theilmann	183	134	149	199	150	203
Smith	151	185	152	178	155	119
Hafner	122	157	161	134	101	151
Taylor	109	117	132	133	86	148

At Chicago.

The following is the record of the games rolled on Chicago alleys, Tuesday evening, February 4:

ALL STARS	1st	2d	3d	T'l
Chas. Hunt	162	135	114	411

Philadelphia.

TRADE LIVELY AND THE DEMAND FOR GOOD FLOWERS HARD TO SATISFY.—PRICES AT A HIGH LEVEL.—CLUB HOLDS AN ANIMATED SESSION.—NOTES OF VARIOUS DOINGS.

Things have been moving along lively the past week, there having been a goodly number of dinners and other social functions that have kept the surplus from accumulating and made a demand for all first-class stock that was hard to fill. The dull weather, of which we have had a surfeit of late, has made the stock scarce and prices are well up. Select Beauties are bringing $8 per dozen while $15 is asked for the best teas. Carnations are in good supply and the quality is all right. Prices range from $1.50 to $6, the latter for a few of the extras. Violets are in good shape and sell fairly well. Lily of the valley is plentiful at from $3 to $4. The new crop is in better form and the leaves are more in evidence.

The February meeting of the Florists' Club was a rather windy affair. There has not been so much eloquence let loose for many a long day. Geo. Moss read a very practical paper on how to pack, cut and ship cut flowers. This appears in another column of this paper and should be read by most cut flower shippers. There were two severe wind storms, one over the acceptance of a supplementary report of the Helen Gould rose committee and the other as to whether the bowling club should be given charge of the selection of a team to represent the club at Asheville next August. The Bowling Club gets the honor and while the club accepted the supplementary report of the committee on the Helen Gould rose, they did not care a picayune whether it was published or not, and so voted.

Hugh Graham had the decorations for the dinner of the millionaires last Wednesday. It was a magnificent affair, with the flowers in keeping with the occasion. Cattleyas, lily of the valley and acacias were the principal kinds used.

B. Stahl had the decorations for the German-American ball at the Academy of Music Monday. They were quite elaborate and very much admired. K.

SHELBYVILLE, IND.—Charles Werner & Son, wholesale confectioners and tobacconists, are building a range of commercial greenhouses.

WOOSTER, O.—The large greenhouses of C. Z. Yoder, northeast of town, were wrecked by fire January 27, entailing a heavy loss.

NORWICH, CONN.—As the result of a disagreement about working on Sunday, Peter Long, 55 years old, shot Mrs. Abraham Plant, who employed him as gardener. The wound is not dangerous.

TRADE ACTIVE THE PAST WEEK.—SCARCITY OF ROSES MAKES A MARKET FOR ALL BULBOUS FLOWERS.—THE PREVAILING PRICES.—THEATRE TRADE NOTICEABLE FOR ITS ABSENCE.

Business for the past week has been very enconraging, quite a contrast to the preceeding period. Cut flowers and blooming plants sold in a very satisfactory manner and there was quite a demand for palms and Boston ferns. The scarcity of roses has proven very advantageons for the disposal of bulbous stock, there being a demand sufficient to keep down any surplus, which is very gratifying considering the large quantity coming into market. But it is feared these conditions will not last long with Lent so close at hand. While the Lenten season does not cut so much of a figure in the flower trade as it did in former years, yet there is a certain stagnation of the business for the first week or so which generally creates a glut, especially in the bulb line. Von Sions are coming in fine now and sell well at $4 per hundred. Tulips bring $3 and $4, Romans $2 and $3, Paper Whites $3, and some extra fine Golden Spur $4. Lily of the valley is good at $3 and $4. Callas are very scarce and good ones readily bring $2 per dozen. Roses range from $5 to $12, with a few extra fine ones at $15. Carnations are very fine, the price being $2 to $3 for common and $5 for fancies.

There is one feature of the cut flower business in this city which is noticeable by its absence, and that is the theatre trade. It is customary in the eastern cities and towns, and in the west for that matter, for the patrons of the theatres to show their appreciation of the work of the actors by presenting them with bunches and baskets of flowers over the footlights. Sometimes an actress will receive as many as a dozen bunches of an evening. Here it is a thing unknown. The writer has to hear of the first bunch being passed over the footlights. The dealers say it is not the custom, a fact which is very much to be deplored, as it often adds a good many dollars to the coffers of the florists. Some one ought to start the ball rolling and perhaps the fad would be taken up.

G. M. Naumann intends exhibiting his seedling carnation, Louise Naumann, at Indianapolis. It is a cross between Tidal Wave and Scott, dark pink in color. He does not claim it is a fancy, but says it will produce a great many more flowers than Scott, has a stiffer stem and does not burst its calyx. ECHO.

RACINE, WIS.—January was a big month for local people and A. J. Fidler says the prospects are bright. Azaleas are selling well and the prices of cut flowers are high.

The Mrs. E. A. Nelson

Bids fair to become the **COMMERCIAL STANDARD** pink carnation. It is a healthy grower, a free and continuous bloomer and it is sure to thrive wherever grown.

The following letter from Messrs. Robert Craig & Son speaks for itself:

PHILADELPHIA, PA., Jan. 6th, 1902.

S. S. SKIDELSKY. *Dear Sir:*—We are much pleased with the "Mrs. Nelson" Carnation, of which you sent us plants for trial last spring; it has a fine constitution and is an abundant bloomer. The blooms are of good size and the color very desirable. It has good, long, stiff stems. We think it will be a standard variety. Yours truly, ROBERT CRAIG & SON.

PRICES.

Per Dozen, $2 50; 25, $3.50; 50, $6.00; 100, $10; 1000, $80.
250 go at 1,000 rate. Send for descriptive circular.

FIRE BRINGS A HEAVY LOSS TO SMILEY.—EARLY MORNING BLAZE IN HIGH WIND.—COLD HURTS TRANSIENT TRADE.—ROSES SCARCE.—NOTES.

About 3:30 o'clock on the morning of February 3, fire broke out in the greenhouses of S. B. Smiley, at Lancaster, and almost entirely destroyed the plant. A very heavy snow had fallen during the previous day and the flames burned fiercely, fanned by a high wind. The firemen did splendid work and were able to save a portion of the range, but the middle of the plant, the greenhouses around the boiler shed, were destroyed with their contents. So rapidly did the fire spread that the night man, who had a room in the greenhouses, had to get out through a window. The loss is about $8,000, with insurance of $5,000 on the buildings. All the spring stock is lost and all the plants in course of preparation for Easter. Mr. Smiley had one house of fine smilax and succeeded in cutting some of that before the fire reached it. He has secured a greenhouse from Mrs. Dr. James which will help him out on spring material and will rebuild the plant as soon as possible.

The continued cold weather and severe storms of the past week have interfered with store trade, but there have been a number of decorations for receptions and balls which have helped to keep the florists busy. There has not been very much funeral work. Stock is not in oversupply, except bulbous material. Good roses are very scarce, but carnations are plentiful and very good. There is always a demand for them.

Mayor Knight is reported as having determined to reappoint none of the present members of the park board and this will let out Commissioner Kasting, but both he and Wm. Scott are mentioned for the appointment and as there is no politics in it, either would be a good man for the place.

F. G. Lewis, of Lockport, is at Mt. Clemens, Mich., for his health.

Mr. and Mrs. J. H. Rebstock have gone to New York city. W. A.

BRANTFORD, ONT.—It is about a quarter of a century since J. B. Hay opened a seed store here. In 1879 he was obliged to arrange a compromise with creditors on liabilities of $4,000, at 60 per cent discount, and now finds it necessary to make an assignment.

PITTSBURG, PA.—We understand that Hitchings & Co., of New York, have just completed a range of orchid houses for Dr. Shafer that are the admiration of all who see them. Some other fine conservatories are in course of construction and several new contracts have been awarded to eastern builders recently.

Carnation "Floriana"

We believe this to be the best Pink Carnation introduced to date. The color is an exquisite rosy pink with no trace of purple, just the color we have been looking for; looks like the coming pink carnation as it is a steady bloomer and good twelve months in the year. Has a stiff stem, perfect calyx, and is a good free grower. Flower about three inches, of good shape, being well built up. This variety was disseminated Spring of 1901 to a small extent by the originators, Messrs. Fillow & Banks.

We have the pleasure to handle the stock of originators.

PRICE FOR ROOTED CUTTINGS—$6 per 100, 50 at 100 rate; $50 per 1000, 500 at 1000 rate. Less than 50, 8 cents each.

Cincinnati.

BUSINESS CONTINUES BRISK AND ROSES SHORT OF REQUIREMENTS.—A LARGE PARTY FOR CARNATION EXPEDITION.—VARIOUS NOTES.

Trade holds up well, with flowers of all kinds, except roses, to fill orders with. Good roses are scarce and sell at sight. Harrisii lilies and lilies of the valley are more plentiful and meet with a good demand. George & Allan are sending in a nice lot of tulips and daffodils, which sell fairly well, while their Romans and narcissi receive first call. Violets are also more plentiful and seem to be moving briskly. Smilax and adiantum are also more abundant. There are enough carnations to fill orders, and a few to spare. It is funeral work, more than anything else, that is keeping the storemen busy, consequently the demand seems to be for pink and white flowers.

Some of the boys are talking of stopping at New Castle on their way to the carnation meeting at Indianapolis next week, to have a look at the rose growing establishments of that city, going from New Castle to Indianapolis and then to Lafayette to view the Dorner establishment. They have been promised a rate of $7 for the round trip, which is very cheap, and quite a number have signified their intention of participating.

The writer saw a fine lot of poinsettias the past week at the Cincinnati Cut Flower Company's. The bracts measured sixteen to eighteen inches in diameter, with stems five feet long. Gus. Meier, of Hyde Park, was the grower.

We wonder what Charley Jones does with all the baby primroses he buys? Charley is always bulling the market on this flower.

Will Murphy does not get into the city very often, as he is busy rooting the Estelle carnation.

C. C. Murphy is sending in a big cut of carnation blooms this winter. D.

LOS ANGELES, CAL.—E. Rust has opened a nursery stand on Broadway. Gustav Brose is very ill of penumonia.

The Coming Scarlet Carnation,

Challenger,

Absolutely the best and most free flowering Scarlet Carnation ever introduced, large size, splendid color, never bursts, flowers early and all the time. Certificate R. I. Florists' Club; R. I. Hort. Society. Price for strong well rooted cuttings ready now, dozen, $2.00; twenty-five, $3; 50, $5; 100, $10; 1000, $75.

New Rose for 1902.

MRS. OLIVER AMES.

For description, prices, etc., see advertisement in this paper January 4th, 1902.

What the leading Retail Florists of the different cities say of this Rose:

Mr. W. J. Palmer, of Buffalo, writes under date of Nov. 28:

DEAR SIR:—The beautiful Mrs. Oliver Ames roses received in perfect condition and are very much admired by my customers; just as I have heard you say, the public want something besides Bride, Bridesmaid, Meteor or even Beauty. Each of my customers who saw it remarked something good about it. Accept my thanks for the beautiful roses. Yours truly, W. J. PALMER.

JOHN N. MAY, Summit, N. J.

STEADY SEASON'S BUSINESS.—ROSES SCARCE EXCEPT BEAUTIES. — CARNATIONS OF EXCELLENT QUALITY.—WITH THE GROWERS.

Trade conditions here have been steady. Carnations are not quite so plentiful as they were but there is still enough to go around. The quality is excellent. Most of the high grade varieties are grown here and the latest disseminated are also on trial. Roses are rather scarce, as they are off crop with the exception of Beauties. These are very plentiful and good but prices are considerably lower than at this season last year. Violets are good and very plentiful. The dark varieties seem to be the only ones the buyers will look at. Wholesale prices are 50 cents to 75 cents per hundred. The supply of greens, such as asparagus, smilax and adiantum, is abundant. Lilies are looking well. The batches that are being grown for Easter trade are just at about the right stage and look strong and healthy. Barring accident they will be as fine a lot as any one could wish to see. The percentage of disease this year is very small.

The Kalamazoo Nursery and Floral Company has relinquished its charter and been absorbed by the Michigan Central Nursery Company. At a recent meeting of the stockholders a directorate was appointed with Chas. A. Maxon as manager.

The Dunkley Floral Company's houses which are under the management of M. F. Kyle, are looking well and show every evidence of being in the care of a skillful and up-to-date grower.

The Van Bochove Brothers have had great success with their new range of carnation houses. Their Beauty houses have also done excellently.

Sam. Batson, who grows carnations exclusively, is having some very fine cuts, his Armazindy being particularly good.

NEMO.

Minneapolis.

TRADE BRISK AND ROSES STILL SCARCE.—CARNATIONS BRINGING GOOD PRICES.—PERSONAL NOTES.

There still remains a scarcity of tea roses, with a good demand, also for carnations, which are commanding a price up to $4 per hundred for the choicest. Romans are showing on the market again. Daffodils and tulips are being brought in but the stems are too short as yet, and the prices are not high. Smilax, for the last two weeks, has been in great call and the surplus stock which was on hand cleaned up rapidly.

The Wm. Donaldson Company has had its hands full, with decorations, the last week and "Jim" and Ralph have been on the jump.

C. F. Rice was one of the unluckly ones, recently suffering an illness of a few days, but is now up and around once more.

C. F. R.

DANVERS, MASS—H. B. Learnard and W. A. Shirley have formed a partnership and opened business in a new greenhouse on Chester street, close by Walnut Grove Cemetery.

WEATHER UNFAVORABLE FOR THE GREENHOUSE INDUSTRY.—PATTEN GETS A BADGE.—VARIOUS NOTES.

The weather of late has been very severe and on Sunday night, February 2, the storm was so heavy that it broke a great deal of glass for the growers, causing considerable loss. Business has been steady the past week, with quite a little going on in the way of social work. There has been a noticeably heavy demand for red roses, which are in light supply. Liberty and Helen Gould-Balduin have the preference. Some very good freesias are to be seen and tulips are coming along. They sell fairly well. There is a plenty of all greens except adiantum, which is very scarce.

On January 28 the Lowell lodge of Elks presented Geo. W. Patten with a handsome gold badge of the order as a testimonial of their esteem. He is District Deputy Grand Exalted Ruler for the state of Massachusetts and Past Exalted Ruler of Lowell Lodge No. 87. The recipient was taken completely by surprise but expressed his thanks in a very neat speech. It will be remembered that last fall Mr. Patten suffered a stroke of paralysis from which he is slowly but surely recovering.

Wm. Whittet failed of the appointment as superintendent of parks, the "powers that be" having conferred the office upon a drygoods clerk.

H. B. Green has one house filled with fern balls which are in good shape and selling briskly at from $1 to $1.50 each.

Baltimore.

ANNUAL CARNATION SHOW AN ASSURED SUCCESS.—MANY EXHIBITS PROMISED.

At the meeting of the Gardeners' Club January 27 the members perfected the preliminary arrangements for the annual carnation show, which will be held in the rooms of the club, Royal Arcanum building, Saratoga street near Liberty, on the afternoon and evening of February 24. About 10,000 blooms will be staged, according to present roseate opinion. The following local florists will send exhibits: Isaac H. Moss, John Rider, Lehr Bros., Frederick Bender, William Christie, Robert L. Graham, Fred. G. Burger, Woodfall Bros., Chas. E. Akehurst, John Cook, Edwin A. Seidewitz and Halliday Bros.

Amateur exhibitors will be Charles M. Wagner, gardener to Mr. Diffenderfer; E. Holden, gardener to Mrs. Robert Garrett; E. C. Price, gardener to Mrs. T. Harrison Garrett.

Out-of town exhibitors will be Robert Craig & Son, Philadelphia; E. G. Hill Co., Richmond, Ind; C. W. Ward, Queens, L. I; John N. May, Summit, N. J. Other exhibitors will enter later.

John Cook, Jr., Charles M. Wagner and Mack Richmond compose the show committee, and a long list of society ladies has been named as patronesses.

Paterson, N. J.

The greenhouses of F. D. Vreeland are now known as those of the Cedar Cliff Rose Company.

The greenhouses on the Notch road owned by Mrs. A. B. Murray and run by A. Nelson for several seasons, have been taken down and sold. Mrs. Murray says she has had all the experience she cares for as a rose grower. The place was known as the Clear View Greenhouses.

San Francisco.

STOCK IN GENERAL SHORT OF THE DEMAND.—UNFAVORABLE WEATHER THE CAUSE.—NEW CARNATIONS APPROVED—GROWERS TO COMPETE WITH THE CHINAMEN.

Continual cold weather since the beginning of December, with only two small showers of rain, has made stock very scarce. Especially is this felt by the smaller dealers, who rely a good deal on outdoor material, of which, with the exception of violets, very little is to be seen, and that of the poorest quality. Violets are also very poor in general and prices are low accordingly. Indoor stock is good but not enough to go around, and prices are very near the same as at New Year's. Beauties bring from $2 to $4.50 per dozen, teas from 75 cents to $1 50 per dozen, and carnations from 25 cents to $1 for Hobarts. Bulbous stock is cheap.

Mr. Clack, of Menlo Park, reports that the shipping business is very good and that he could easily sell more if it was to be had. The stock in his houses, some sixteen in number, is in the best of condition. Especially may this be said of the carnations, of which he has eight houses. All the leading varieties are grown here. Among others are Lawson, Scott, Hill and Portia. Of the newer varieties he thinks most of Dorothy as a producer and intends to stock at least two large houses with it for next year. At least one house of Estelle will be planted next season, which, by the way, seems to do well with everybody around San Francisco, and will be the leading scarlet next season.

Goertyhain's are busily engaged building a large house 20x200 for chrysanthamums and carnations. Their stock is a little late this season, but healthy and strong. They will supply San Francisco with asters next season; some 50,000 will be planted. This will send John Chinaman back to railroading and shrimp fishing. Sweet peas will also be grown here by the acre to make the Chinese shiver. GOLDEN GATE.

Lenox, Mass.

A well attended meeting of the Lenox Horticultural Society was held February 1. Three new members were elected. Wm. Tricker, of Riverton, N. J., read an exceedingly interesting paper on aquatic plants, for which a very hearty vote of thanks was accorded. The annual ball of the society took place on January 28 and was a great success, upwards of 300 persons being present. Credit is due George Thompson and his co-workers for the able manner in which all the arrangements for the ball were carried to such a successful issue. F. H.

CARNATIONS.

THE NEW VARIETIES.

At the meeting of the St. Louis Florists' Club on Thursday, February 13, J. W. Dunford discussed the newly introduced carnations as follows:

In looking over recent trade papers and catalogues I find there are about twenty-five new varieties of carnations being sent out this year, and this is about the same number as last season. How many of them will prove to be better than existing varieties is hard to tell, but there are sure to be some. It is a little unfortunate that introducers are not more moderate and in some cases more truthful in their descriptions. It is still more unfortunate that some varieties are sent out at all; but we gladly admit that the general trend is onward and upward. Our plan is to buy a few each of as many of the new kinds as we can afford, providing we think, from seeing the flowers or reading descriptions, they are the kinds suited to our needs. We, however, go largely by the reputation of the firm sending out the variety, believing that a firm sending out a kind under a misleading or false description once, would have no scruples about doing so again. If by doing this we can gain two or even one kind that proves to be better than the others in its class, in one season's introductions, we feel amply repaid.

Personally, I think we are on the eve of great things in carnation culture. Go back with me ten years. Where are all the old timers? What was the standing of the carnation compared with some other flowers? I believe that in another ten years or less, there will not be a kind growing commercially that we are all familiar with to-day. I believe that the Lawson, Marquis and Prosperity are only the beginning of a new era in carnation culture, and that, while a rose is a rose, and nothing will ever take its peculiar place in the flower world, the carnation is in the lead to-day and means to stay there.

Of the many varieties sent out in 1900 there are only three that we think worth keeping. The Lawson needs no comment from me. It is fine, easily grown, but our summers are very hard on it. We shall try some planted from pot to bench this spring. Marquis and Lawson seem to thrive in about 50° to 52° night temperature, with liberal treatment, plenty of water and a judicious use of liquid manure. Regarding Marquis as a keeper, a wholesale man said to me a few weeks ago: "How is it that Marquis reaching me in the morning under similar conditions as other carnations and from the same grower, are ready to close up in the afternoon, and by the following morning are unsalable." I could say only in substance that they were grown too warm, cut too tight or not handled properly after being cut. We have frequently marked individual flowers on the plants and three weeks afterwards found them in excellent condition, a trifle pale but awake. I have with me two flowers that were marked on January 24, just three weeks ago to-day. Look at them and judge for yourselves.

Genevieve Lord is very fine for late spring and summer blooming when there is a little shade on the glass, but fades badly in the winter. It makes the biggest plant and strongest growth of anything on the place. Morning Glory, Olympia and Crocker we shall drop.

Among the kinds sent out in 1901 are some good things. Prosperity is very fine, but I am afraid we cannot afford to grow it at present market prices. It has absolutely no fault that we can see, but stinginess. If this variety could take the place financially among carnations, that the American Beauty does among roses, it would be Prosperity, or at least we would not lose money growing it.

Gov. Roosevelt we consider the best crimson and we will discard all others in this color. A finely formed flower, color just a shade darker than Gomez, but much fuller, fine stem, very free and early.

Norway is a good fancy white, comes a little flaked with pink in midwinter, but this does not hurt it. This kind is all right, free, strong grower, stems averaging thirty inches; one of the best sent out last season.

Lorna is a decided improvement on White Cloud, better in every way. We have picked flowers from Lorna with thirty-six-inch stems.

Mermaid is a good one in the salmon-colored class but somewhat of a cropper with us and has a tendency to split early in the season. It has a fine spicy fragrance, large flower, stem a little weak for the size of the bloom. We shall keep this variety, as it is the best in its color.

Queen Louise, as a good pure white, is a variety that will give more flowers per square foot of bench surface than any other kind we know about. There is no other white in the same class with it. We have been picking continuously from it since September 15. It is a good grower, the stem averages twenty-four inches and so far has developed no fault of any kind.

Dorothy is in the market to stay. We are much pleased with it and believe that it will eventually drive all the old timers in this shade of pink entirely out of the market. It is free, early and continuous. The flower is larger and fuller than Scott. We have as yet failed to find its first fault. Being that peculiar Scott shade of pink that always sells so well, it is bound to be a bread winner.

Hoosier Maid has a growth and flower similar to Daybreak, but it is white, just the thing for those who do this old kind well but who cannot grow some of the better whites. Give it Daybreak treatment.

Goethe we do not like at all. It is too single and fades badly. We shall not give it bench room again. Sunbeam is a good grower and free, but it also fades. We shall drop it.

Bon Homme Richard is as long as its name. We have them with thirty-six-inch stems, but the flower is rather small for the length of the stem. It has faint pink markings that do not hurt it a bit. I think this kind will give better satisfaction another year, as the stock we bought was rather poor.

This is the end of our list, as we did not invest in any of the others sent out last season. We think, on the whole, that a very creditable lot of new varieties was sent out last year and predict still better ones this season.

PACKING AND HANDLING.

Sleepy carnations are worse by far than bursted ones; it is a condition, once reached, for which there is no remedy, and has done more than any other one thing to keep the carnation a cheap flower. A bunch of carnations that will keep for several days or a week will make of the customer an ardent admirer of carnations, while a bunch sold that will not keep over night disgusts him and makes him a customer for other flowers.

There are a number of causes for sleepiness, several of which have been covered in former articles by experts in their special lines. Poor packing is one of these causes, but it would be hard to lay down rules for packing, as the distance of shipment, weather and other conditions have much to do with it. All of my shipments go to distant points in bulk and I use a corrugated cardboard box for lots of 700 or less and empty shoe cases for larger lots of flowers. Each box is lined with waxed tissue paper and then the flowers, in bunches of twenty-five, are put into the box, closely but not tightly, packed with the flowers towards each end of the box and the stems crossed or interlaced in the center of the box, this crossing or interlacing being about four inches, so that one cleat catches both sets of stems nicely. We try to have about an inch of air space between the flowers and the end of the box.

The cleat used is pine, one inch square, and cut to the width of the box. This is nailed down tightly over the stems in the center of the box. With the cardboard boxes we use a tin cap for the head of the nails so that they do not tear the cardboard. Over this first layer is placed a piece or two of waxed tissue paper and a second and often a third layer of bunches packed in the same manner, being careful to have all the strips used for nailing them down come exactly over each other. These strips nailed across the center of the box hold the stems so tightly that there can be no jolting or jarring of the flowers, no matter how roughly the box may be handled. With this method of packing there has not been, to the best of my knowledge, one complaint within the past three years of broken or mussed flowers, and not one bunch of twenty-five reported as sleepy.

After the box is packed as above we take newspapers and tie or nail them around it, about one-half inch thick, and then wrap the box with a good, strong, smooth manilla paper for an outside covering and for marking. This, of course, means some trouble and expense, but in the three years named I have not had one box of flowers frozen and the freezing of several boxes of flowers in a season would cost much more than could be saved by a less careful method of packing.

R. A. M'KEAND.

(Chairman Indianapolis Reception Committee.)

In many cases this sort of packing would be unnecessary, but not in so many cases as at first glance may appear, for the greatest danger from freezing is with the delivery wagons, where they are hauled around for from one to three hours on a cold day, with little or no protection. This extra labor in packing is therefore a sort of insurance against frost, and then, if a box is frozen, you can with a clear conscience make the express man pay for it, whereas in most cases it would be an injustice to compel an employe to pay for a box that was not properly protected against frost.

Another cause of sleepiness, and perhaps the greatest trouble of all, is the constant reaching after size, regardless of everything else. This leads growers to leave their flowers on the plants until they are fully developed. This may be all right for immediate and local use, but it must be remembered that with the full development of the flower on the plant there is also a full development of both the pistil and the stamens and these fully developed flowers will fertilize themselves with ordinary handling, and as soon as this fertilization takes place the flower is ready to go to sleep.

The flower is that portion of the plant intended by nature for the reproduction of the species and will remain open and perfect up to a certain limit of time waiting for this fertilization to take place. The carnation, through high culture, has turned its stamens into petals, thus preventing the natural process of fertilization, but nearly all carnations have a well developed pistil and quite a few have from one to eight stamens with ripe pollen. When fully developed, it takes but a very little bit of this pollen to produce fertilization and handling the flowers will put many of them on the road to sleepiness.

The remedy here is plain and simple enough. Simply cut the flowers before they have ripened any pollen. I pick my flowers three times a week, and closely at that, and as spring approaches we pick every day. I no doubt lose some in size but make that up in the keeping qualities of the flowers, having, as before stated, had no complaint of sleepy flowers within the past three years. These carnations will improve in the buyer's hands, if sold promptly, and give satisfaction and I think some of my customers must have discovered this for even with a little lack in size they bring as much or more than some that have been left to attain their full size. This is not an advertisement for my flowers, but a simple statement of facts, as I have no flowers to sell at any figure.

There are, of course, many flowers ruined in transit by being placed in a hot portion of the car. This is a matter that has to be fought out with the carrying company, but can often be avoided by careful packing. My flowers are put into water for a period of about eight hours, being cut in the morning, packed in the evening and all night in transit, with delivery the next day some time in the forenoon. While in water we try to keep the temperature 40° to 45°.

Growing the flowers too warm will superinduce sleepiness in the flowers and also where they are grown in too rich soil, in fact anything that has a tendency to soften the growth of the plant has this effect. This is an important matter and I would like to see it discussed by growers who adopt different methods with success. We cannot learn too much about the marketing of our finished product.

ALBERT M. HERR.

KEEPING QUALITY OF CARNATIONS.

I have read much of late about the lack of keeping quality in carnations and of shipments being asleep upon arrival at their destination. The many theories advanced as to the cause of this unfortunate condition have lead me to give this subject considerable thought and to make tests to satisfy myself that it is not the fault of the flower or the method of growing. I do not like to see people so ready to condemn this popular flower and throw it into obscurity.

Beginning with the time the plant is taken out of the field and benched in the houses, I find that the first flowers cut, those which are budded in the field, fail to keep well and lay the cause to the change of conditions. But this soon passes away and everything goes well until Christmas, when there is a hue and cry about pickled and sleepy carnations. Of course, there is a good deal of truth in what is said, but there is room for much doubt, and I find that most complaints come from people who buy in the wholesale market only at holiday time. They expect to pay only $3 or $4 per hundred for good carnations, and when the bill comes at $6 or more, there is consternation, and fault is found with part of the flowers, a reduction on the bill being asked, so that in the end the average cost will be somewhere near what the customer expected to pay.

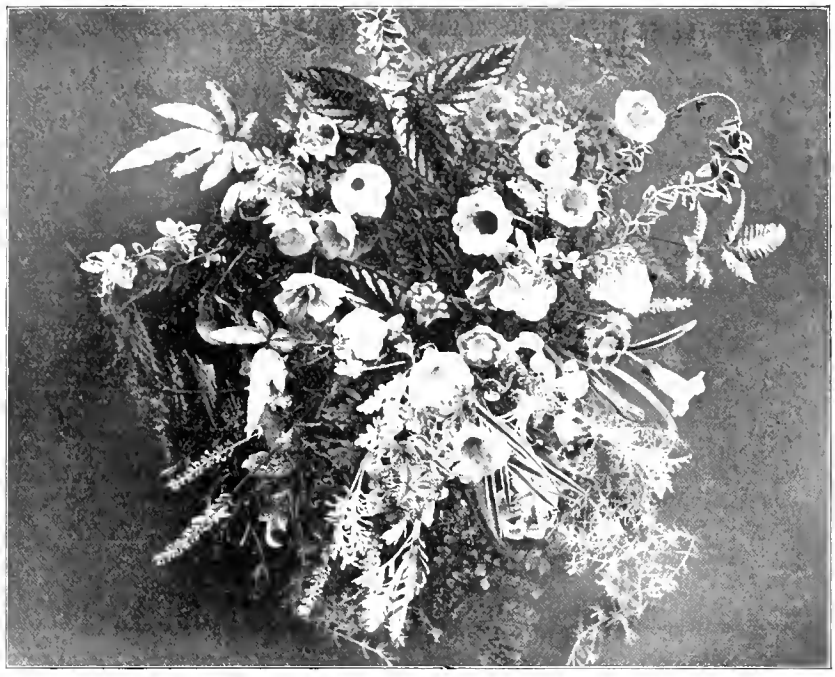
I do not know a grower or a commission man who does not exercise the greatest care in the selection of stock for shipping. It would be folly for him to do otherwise. Of course I know that there are growers, especially the smaller ones, who, for ten days or more before holidays, do not send in any stock unless hard pressed. This is certainly pickled stock when it reaches the wholesale market, but it is invariably sold to city buyers at low prices. I do not think it is ever knowingly shipped. Personally, I believe in holding back carnations by leaving them on the plants two or three days longer than usual, so that there will be an extra supply with which to meet the extra demand at holidays. Something must naturally be done to meet it, and I do not think that if this holding back is properly attended to it will lessen the keeping quality of shipping stock. Of course, there are exceptions to all rules, and there are a few varieties of carnations that will not keep ten hours after being cut. These varieties are known, and should not be shipped, much less planted by up-to-date growers. But wholesalers, in times of scarcity, will take chances on these varieties, and often pay for them, as they should.

On a recent Sunday our Mr George Reinberg cut two each of Crane, Joost, Lawson, Hill, White Cloud, Evanston, Marquis and Irene, and placed them in a vase in his home without change of water. The third day Joost, White Cloud and Marquis were asleep. The next day Lawson, Irene and Evanston were closed up, and then Flora Hill, but not until Saturday did Crane begin to show age. This should convince anyone that carnations, properly handled, should reach any destination in salable condition. But they dont, and why not? I will give my opinion.

The general method of packing cannot be improved upon. I have packed flowers for twenty years, and in that time have seen a great many methods followed, but it does not seem to me that it makes much difference as to keeping, whether carnations are placed carefully in layers with waxed paper between each layer, or whether they are packed in bunches of twenty-five, just as they come from the growers, regardless of order. In fact, some buyers prefer this method of packing, and I think it would be worth while to give it a general trial.

I think that our greatest trouble hinges with the express messenger who has the care of the boxes on the cars. In cold weather he is afraid they will freeze, in which case he is held responsible by the company and must pay the loss. To avoid this, when he receives flowers, up against the steam coils they go, no matter to him if they cook, for that cannot be charged up against him. This is the reason that in late years so very little stock is reported frozen in severe weather, and if a shipment is lost, and the fault traced down, we are told that a new man was on the run that trip; old men get wise. The train reaches its destination at midnight or early morning, and the box of flowers is taken to the depot office, where it is set beside a red hot stove. What can the result be? Upon opening the box the carnations are asleep, or ready to close up as soon as put in water.

Both shippers and buyers will notice that when the weather is moderate and little steam is required there are few or no complaints. Get a carnation chilled, and then have it heated up, as in the case before stated, and it cannot but go to sleep. I say that the best remedy for sleepy carnations is to teach the express messenger to keep the flower box a foot or so above the floor of the car and away from the stove or steam pipes. Then the flowers will arrive in good shape, for the box is wrapped to prevent freezing if ordinary care is taken. O. W. FRESE.



WREATH, PRINCIPALLY GLOXINIAS AND FOLIAGE.

NEW CARNATIONS IN CALIFORNIA.

Probably no city in the United States is to-day supplied with finer carnation blooms than is San Francisco, Cal. The writer recently paid a visit to the metropolis of the Pacific Coast and was very much surprised at the excellence of the stock in the florists' windows, and especially those shown by John H. Sievers & Co. "Sievers' carnations" are well known on the Pacific Coast, but not so well known in the eastern states as they ought to be. For a number of years Sievers & Company have been hybridizing and producing new carnations, but only a few of these have found their way into public channels, yet a few of them are well known and highly esteemed in the eastern states.

Of the many new varieties of merit now in the hands of this firm, probably none gives greater promise than Hannah Hobart. This is really a remarkable flower, never less than four inches, and frequently four and one-half inches across. This is getting pretty close to Uncle John's ideal. In color it is a shade deeper than Lawson, but the petal arrangement is quite different. In this respect it most resembles the old Jubilee, but of course the color is different. I saw two large houses of it at Sievers', and the sight is one long to be remembered, hundreds of blooms in sight and not a poor one in the lot, and everyone the exact counterpart of the other, no bursted calyxes, but every flower supported on a twenty-four-inch stem, and standing up like soldiers. Mr. Sievers has been growing this variety about five years, but as yet it is not disseminated except, I believe, to one or two eastern men on trial. There is certainly no carnation of its color that can equal it; it knocks Lawson into a "cocked hat," and averages all the time an inch larger.

Another remarkable variety, and one which I believe will become a universal favorite, is A. B. Spreckles. In color it is a bright scarlet, very double, and every petal deeply fimbriated, of immense size, being very little behind Hobart in diameter, but the quality that will commend it to the public is its odor. It has the finest and fullest old-clove perfume; one smell lasts half a day, and one bloom will perfume a room. The petal arrangement is about perfect, and the stem, calyx and general habit of the plant all that can be desired. I want you eastern fellows to keep your eye on Spreckles.

Another good one not yet out, but which has been grown by Mr. Sievers for some time, is Mrs. McKinley. In color this a deep rose-pink, averaging three and one-half inches in diameter. It has not quite such a fine stem as the two former, but is a fine seller and free bloomer. It is bound to become a favorite with the public.

R. Raymond is an improved Daybreak, and the finest carnation of its color. It averages three and one-half inches, is carried on a fine stem, never bursts and is a remarkable keeper. It has the peculiar habit of requiring three to four days on the plant to perfect itself even after it seems to be developed. Jenny Giffard is a fine free carnation, rose-pink, fringed, and carried on a strong stem twenty-four to thirty inches long, is not a cropper, but always in bloom.

The greenhouses where these fine carnations are grown are within the city limits of San Francisco, and cars run within a couple of blocks of the houses. The houses are mostly three-quarter span, facing the south, and are almost wholly devoted to carnations. Not only are their own fine productions grown, but quite a good deal of space is devoted to the newer eastern varieties. Here may be seen a fine house of Lawson, grown, perhaps, as well as Peter Fisher ever saw them, but a bunch of Lawson placed alongside a bunch of Hobart gives as

great a contrast as would a bunch of Portia beside a bunch of Crane.

This, you know, is the home of Ethel Crocker, and if some of our eastern brethren could see Crocker as here grown, they would feel like giving it a fair trial. John Hinkle, sent out by this firm some two or three years ago, is, in San Francisco, one of the most profitable and satisfactory varieties grown. It is not as well known in the east as it ought to be. In color it is like Roosevelt, but in size it puts this variety in the shade about an inch. It has remarkable stems, never bursts, and as the foreman, Thomas E. Hooper, remarked, "you can always cut a handful." I think this variety is at present overlooked.

One of the most remarkable fancy carnations is here grown very profitably. How does "buff with pink stripes" meet your fancy? This is the color of Iris Miller. I am told it is a really good seller and very productive.

Louise Sievers is the newest thing in yellow, a bloom of good size, three inches and over. It is clear lemon yellow with delicate pink pencilings, yet hardly enough of the latter to dull the yellow ground. It was showing fine crop when I saw it. This is a color always in demand, but few yellow carnations seem to have a long reign.

There are many other good things in new carnations to be seen at the Sievers place, some of which give great promise but which are not as yet sufficiently tried on the home ground. The newer eastern kinds are not neglected; 2,000 Lawsons were looking fine, and Mr. Hooper thinks well of it. The stems were better and longer than are usually seen on this variety. About a dozen houses are devoted to carnations, all of which were in the pink of condition, in fact, the finest grown carnations I have ever seen.

The man behind the bat in this game of carnation growing at the establishment of John H. Sievers & Company is Thomas E. Hooper. Mr. Hooper is a comparatively young man, and a true western one. He commenced as errand boy for the old firm of Miller & Sievers and has worked his way up to his present position. It is the skilful hand of Mr. Hooper that does all the hybridizing; in fact no other man knows the parentage of the many notable new carnations now in his care. I asked Mr. Hooper if he had any objections to giving his cultural methods to the public, and he replied "none in the world," and as they are so radically opposed to most methods in vogue I gladly give them here.

The natural soil here is a sandy loam, of a somewhat yellow color. To ten loads of this soil Mr. Hooper adds two loads of old cow manure and two loads of sand. "The carnation likes sand," says Hooper. The plants are benched about August 1. No top dressing is ever used. The soil is never cultivated nor scratched, but is hand weeded as often as necessary. No feed or stimulant of any kind is ever used before February, and then nothing but liquid. Three pounds of nitrate of soda to 500 gallons of water is the fertilizer here used.

One man does all the watering and he certainly has his practice reduced to a science. Syringing overhead is never practiced except to reduce spider. Airing is strictly attended to. I was at the greenhouses early in the morning and though no sun was shining yet the ventilators were open about three inches. This may have been on all night, but I did not ask. The whole place reflects the greatest credit on the grower, as the stock was fine.

Some space is here given to orchids, palms and pelargoniums. I noted a splendid batch of Cocos Weddelliana, from seed, in 3-inch pots plunged in sand. In the propagating houses, which are all north-side, were thousands of rooted and being rooted, carnations, all of which looked in the pink of condition. I noted that none of the cuttings were shorn, but retained all the foliage. Mr. Hooper thinks he gets a stronger plant in this way.

It is a practice with the firm of Sievers & Company never to send out a carnation till they have a better one. I can-

GEORGE TRUSSEL.
(President-elect, Montreal Gardeners' and Florists' Club.)

not say that I commend the practice. I have had a peep at the "better one" in the present case. It is a scarlet sport of Hannah Hobart, as large as the parent, and finer in every way. COASTMAN.

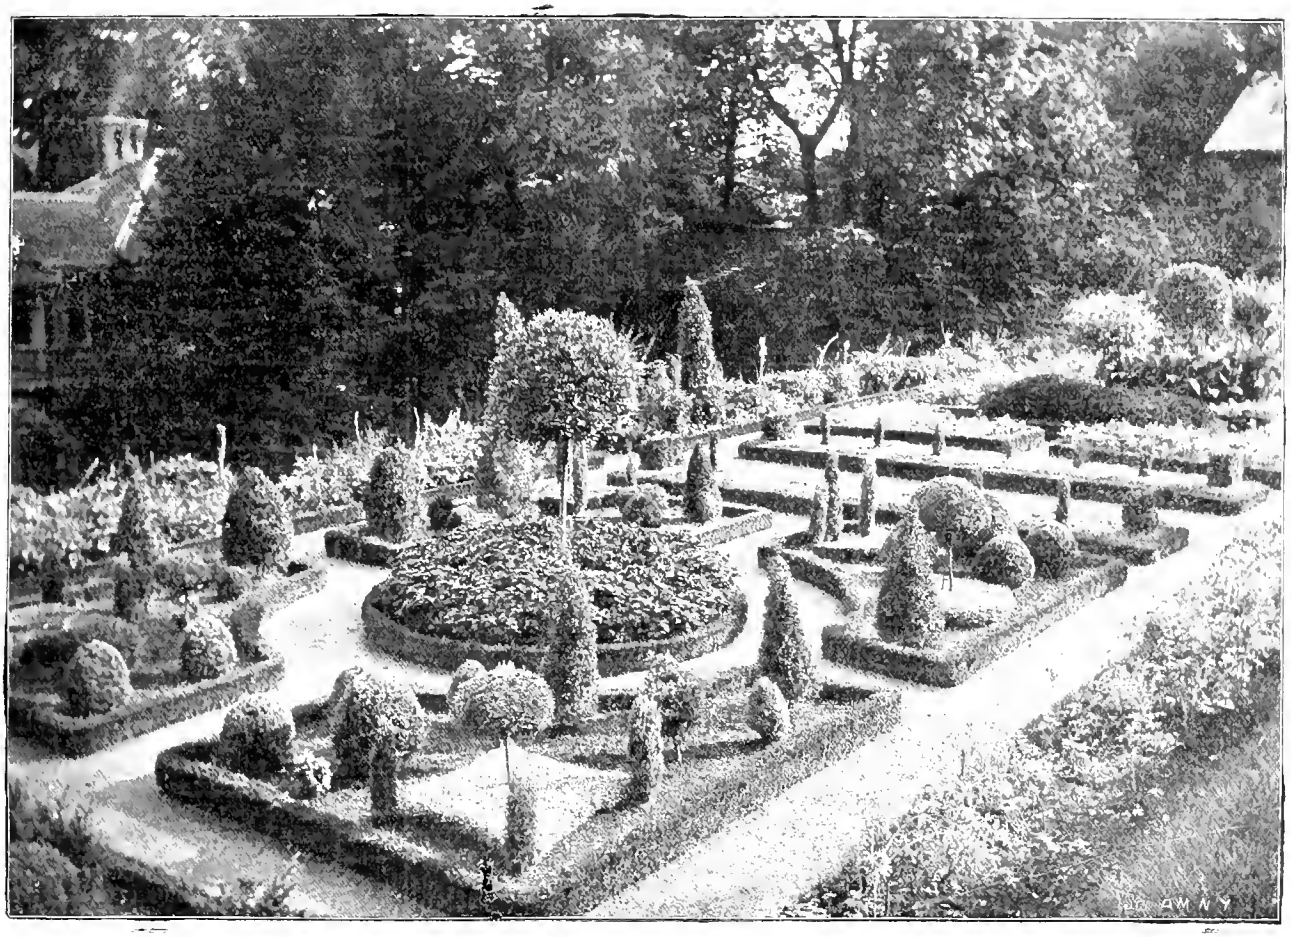
The Rose Balduin.

The note appearing on page 48 of the AMERICAN FLORIST to the effect that Peter Lambert, of Trier, Germany, said on January 20, 1902, that "I can say today that Helen Gould is another rose than my Balduin," should not be allowed to pass by unnoticed. The idea that Mr. Lambert apparently wishes to convey is that Helen Gould and Balduin are distinct from each other. Last autumn during the agitation about the rose in question, and about that time having received a catalogue from Mr. Lambert, and noticing both Balduin and Helen Gould therein, I wrote to him stating that there is a belief in America that these roses are identical, and further asked if he would kindly throw some light upon the subject. No reply was received.

The pedigree of Balduin as given in said catalogue is as follows: Chas. Darwin × Mlle. Marie Van Houtte. The latter tea rose will be remembered as having been renamed "Gem" some years ago by a firm located at that time at Morton, Delaware Co., Pa. Helen Gould's parentage is given as Kaiserin Augusta Victoria × Mme. Caroline Testout. The latter information was originally furnished by a journeyman florist hunting work, who stated he had worked for John Cook, of Baltimore, and Jennings Bros., Olney, Pa., and who also claimed that he owned two plants of a rose which he described as Liberty, but for the purposes of identification was known as Red Kaiserin. A liberal purchase price was offered for said two plants, which was accepted; but when the journeyman put in his claim for them where he had left them, namely, at the last establishment where he had worked, the proprietors thereof refused to give them up, and the journeyman returned empty-handed. He, however, imparted the information where plants in Germany could be bought under the name of Red Kaiserin. Plants were ordered and in due course received, and a fond hope was entertained that they would prove to be Liberty. Liberty was still at this time in the hands of the originators, Alex. Dickson & Sons, Ireland, or their authorized agents in America, Robert Scott & Son, Philadelphia, and E. A. Asmus, West Hoboken, N. J. The latter, when on a visit to the greenhouses where Red Kaiserin (Balduin) was being grown, pronounced it the same variety that he had tried or was trying for winter forcing under the provisional name of Columbia. Sometime during the experimental stages the fact became known that Balduin was not Liberty. A flower of the true Liberty was secured and forwarded to Trier, Germany, whence advice was received to the effect that plants could be furnished which would produce flowers of the genuine Liberty. Orders for plants were again forwarded —whether by cable I forget—and in due time arrived in America, which, after being grown for some time in this climate turned out to be Gruss an Teplitz.

All the above incidents came out during the investigation of the committee appointed by the Florists' Club of Philadelphia, and are herewith given for what they may be worth. It perhaps would have been more in accordance with the opinions of some experts if the whole matter had either been referred to the Society of American Florists or the American Rose Society; but when a member of any organized chartered body makes a motion, which is duly seconded and carried, to have a committee appointed to investigate a matter which may be in dispute and which is likely to prove of general interest, such a committee sees its duty and does it to the best of its ability, and that is the aspect of the case under consideration. The committee looked in every direction where any of the members thereof thought information was likely to be gained upon the subject, with the result as is now known.

Again referring to the note on page 48. There was no re investigation of the subject contemplated, as was indicated therein, but a supplementary report was made, which contained additional information received by the committee, and a motion was made at the last meeting of the Florists' Club of Philadelphia asking the privilege of making a supplementary report, which was granted, and duly read, when a motion was made "That



ITALIAN GARDEN AT O. D. MUNN'S, ORANGE, N. J.

the supplementary report be accepted and given to the trade papers for publication," whereupon an amendment was offered which read "That the report be received and spread upon the minutes," which was duly carried and the original motion lost, but was eventually carried as amended.

"K," in the Philadelphia news notes in reference to this matter, says: "While the club accepted the supplementary report of the committee on the Helen Gould rose, they did not care a picayune whether it was published or not, and so voted." While the above is apparently true, it is only partly so, for the original report of the rose investigating committee made at the January meeting of the club was on motion accepted and spread upon the minutes—nothing further—and this is exactly as the amendment provided at the February meeting, to the effect that the report be received and spread upon the minutes when that part of the motion as originally made, that the supplementary report be given to the trade papers for publication, was lost because the amendment prevailed.

No motion was made to have the paper, which was read at the same meeting by Geo. M. Moss, on "Cutting, Packing and Shipping Flowers," given to the trade papers for publication, yet it is published. The proceedings of the Florists' Club of Philadelphia are public property, no restrictions being put upon any of the papers read thereat nor are the reports of committees held back, and that is one reason why a live organization meeting monthly, even if it is local in name, has an advantage over similar organizations, apparently more national in character, when meetings thereof are held only annually. EDWIN LONSDALE.

Formal Gardening at O. D. Munn's.

Orange, N. J., is widely known as one of the most beautiful suburban residential districts contiguous to New York city. Its population is made up largely of people of refinement and taste who have laid out beautiful grounds surrounding their homes. One of the finest of these estates is that of O. D. Munn, in Llewellyn Park, and among the special attractions here is the famed series of terraces, without a sight of which no visit to Orange is complete. There are eight of these terraces, forming a striking background for the mansion, and back of these again rises the mountain, with its picturesque crags and forests. Our illustration depicts the first landing reached in ascending the terraces. This effective bit of Italian gardening was executed last spring by John Hayes, the superintendent of the estate, from a design prepared by Chas A Munn after a visit to many notable formal gardens in Europe. It is about 40x200 feet, the material being all hardy with the exception of the gigantic bay trees seen in the picture. Mr. Hayes is president of the Floricultural Society, an honor of which he is well worthy as a gardener and as a man. He is extremely popular among his fellow gardeners and florists.

DOVER, DEL.—Charles N. Lloyd has been appointed florist on the Delaware division of the Pennsylvania railroad.

CHRYSANTHEMUMS.

OUTDOOR CHRYSANTHEMUMS.

With regard to the comments of a recent correspondent, the best blooms, with handsome foliage, cannot be obtained by outdoor culture but those who are not used to seeing the very best flowers can obtain results pleasing to themselves and friends by potting strong plants into 6-inch pots the last of May and plunging the pots into the ground. All over three blooms taken will be at the expense of size. Use early varieties, take the first good bud after August 15, and keep all buds picked off that may appear thereafter. If the plant is allowed to continue to set buds, the earlier bud will shrivel and you will have a plant which will produce only late flowers. This is my experience with a hedge of Glory of the Pacific. Move the pots to shelter upon the advent of killing frosts, which may be looked for at any time after October 1. Plants promising very large blooms nearly out should not be allowed to remain out in big storms. Eel worms can be kept out of the pots by soaking occasionally with clear lime water. Lice can be kept off the foliage and tips by a continuous use of tobacco dust. Mulching the ground with fresh tobacco stems and renewing often will also keep them away. If plants are checked, neglected or allowed to wilt you will lose the foliage.

A far better method, and one that will give astonishing and charming results, is to set your plants out in a solid bed 8x9 inches apart and grow to single stems. A bed 5x10 feet will contain 100 plants.

Along in September, when heavy storms are expected, build a rough board house around this, laying hot-bed sash across the top in stormy weather and on chilly nights. Cleat the boards on the sunny side and you can remove this side in fair weather. The north side should be the highest to give the glass a pitch. I have seen very handsome blooms raised thus, some good enough for exhibition.

Experience will be the best guide as to what varieties are the most desirable, but avoid poor growers and those with weak foliage. Those wanting a hedge or permanent clumps for the lawn will find the many brilliant shades of the hardy pompon sorts very satisfactory and things of beauty each fall. RUFUS W. SMITH.

CHRYSANTHEMUM NELLIE POCKETT.

ED. AM. FLORIST:—Will some of your readers kindly give their experience in growing Chrysanthemum Nellie Pockett in 1901? It was catalogued last season as follows: "An extra early white of mammoth size, larger than Col. D. Appleton and earlier than Mrs. H. Robinson; a very solid, compact bloom on the style of Mayflower but very much superior; a fine, healthy grower with grand stem and foliage." The plants I bought did not come true to name and no one exhibited it at our nearby shows nor have I seen any reports about it in the paper.

R. W. S.

Nellie Pockett is a beautiful flower when well done, a large reflexed bloom with a whorled center. It blooms about the same time as Mrs. H. Robinson, but has not the value of that variety for commercial purposes. The growth, stem and foliage are all that can be desired, its one fault being lack of fullness in the bloom unless given special culture. To bring it to its best propagate early, giving the wood a chance to get thoroughly ripe by the time the buds are ready to take, selecting the crowns about August 20. It will stand liberal feeding and attains a height of about three and one-half feet. We do not class Nellie Pockett with either Col. D. Appleton or Mayflower but still consider it worthy of a place in any collection.

CHAS. W. JOHNSON.

An Iowa Establishment.

Before P. L. Larson embarked in business for himself at Fort Dodge, Iowa, four years ago, he was for five years foreman for J. C. Rennison, at Sioux City, and thorough master of the trade. For two years he leased the Kellenberger greenhouses at Fort Dodge and then bought five lots each 50x162 upon which to erect the range of glass, store and dwelling shown in the accompanying illustration. Here he has a model plant of 16,000 feet and does a general local and mail trade. The glass is all 16x18 double strength of first grade and the material in the houses is Moninger's cypress; their ventilating apparatus is also used. There is a boiler shed and work room 14x112 and a steam boiler 4x16.

An Ohio Store and Stock.

The accompanying illustrations are reproduced from photographs that give different views of the retail store of Walker & McLean, Youngstown, O., taken the week before Christmas. These give an idea of what they were doing in the way of flowering and decorative plants, both of which sold exceptionally well. Among plants those that sold best were poinsettias in pots and pans when dressed with Porto Rican mats and ribbon. Next came Begonia Lorraine in 4-inch and 6-inch pots. Medium sized araucarias with mats and draped with red baby ribbon were in unusual demand. Baby primroses in 6-inch and 8-inch pans sold well. This firm also had a number of handle baskets filled with begonias, poinsettias, heathers, and so forth and trimmed with ribbon to match the flowers, but these sold only moderately well. Medium sized Boston ferns sold best of all decorative plants, with a fair demand for kentias, arecas and rubbers.

VICTORIA, B. C.—Mrs. M. A. Connell was married recently and is now Mrs. Farrington.

MIDDLEBURY, VT.—Edmund G. Hunt, of the firm of Hunt Brothers, was married on Tuesday, February 4, to Miss Edna B. Woolley.

The Herbaceous Border.

[A paper by John W. Duncan, read before the Gardeners' and Florists' Club of Boston.]

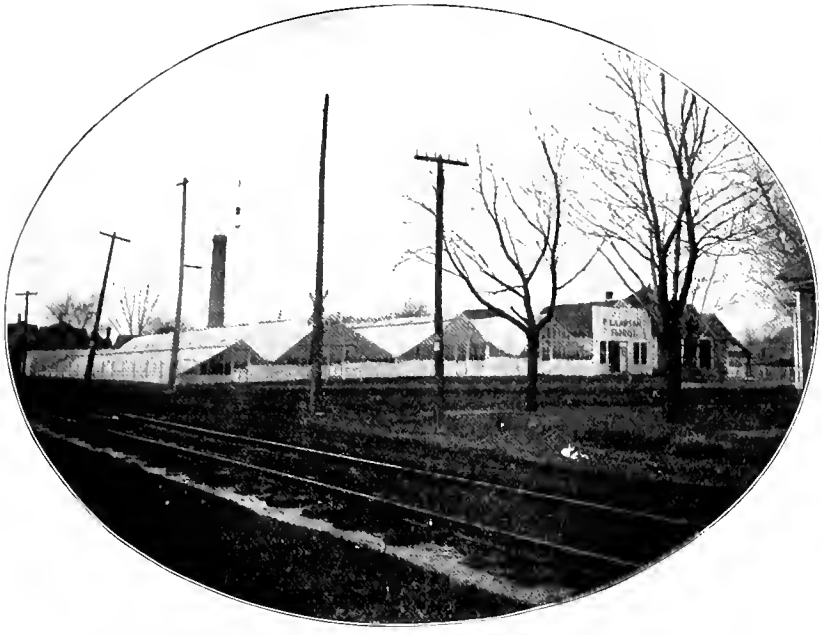
There is no class of plants that, to my mind, will give more pleasure, more abundance of varied blossoms and colors or a longer season of continuous bloom than the occupants of the old fashioned hardy border. It is here that from the earliest days of spring, when the erythroniums and spring anemones greet us with their pretty little blooms, until the late days of autumn, when the frost has blackened the more tender plants, yet left an abundance of hardy chrysanthemums, it is here, I say, that one may pick on any day a bouquet, aye, an abundance of some of nature's gems. I will confine my remarks to a suitable collection to give a varied amount of bloom through the whole season and I hope the professional will sift the chaff to his own liking.

In order to have a good hardy border it is necessary to begin right, and, therefore, in the first place the soil will have to be prepared. Any good, rich loam is suitable for this class of plants, but it will require proper treatment just the same. It ought to be thoroughly drained and subsoiled and well enriched. I have lately seen many herbaceous gardens laid out in small borders or beds, but I do not think that this system is satisfactory. I have seldom seen such planting harmonize with the surroundings. I recall seeing a garden so laid out by a landscape artist, so called. It had small beds edged with dwarf box, walks about four feet wide paved with brick and was planted with a very good collection of herbaceous plants ranging in height from one to six feet. The gardener who had charge of the place was cautioned not to tie or stake up anything, as by so doing he would spoil the natural effects. You can imagine the natural effects that garden had.

There is no more satisfactory way of growing herbaceous plants, in my opinion, than after the style of the old fashioned border of British gardens. Let there be whatever reasonable length or width of border the location and background will permit, the plants if properly arranged will give a wealth of varied hues from all directions and at all times during the season. I do not mean that the varieties shall be dotted through, hit or miss, in single plants, but that each kind shall be kept as much as possible in patches or groups, in many cases the larger the better.

It requires much consideration and a knowledge of the habits of all the different species to plant a border satisfactorily, and any one, after seeing such a border growing for one or more seasons, can usually make marked improvements on the arrangements for its continuous beauty. In a word, the idea is to plant so as to have no bare spaces show during the season, from the dying down of the earlier flowering species. I have sometimes used spring-flowering bulbs to brighten the earlier part of the season and in spaces where they have died down have used annuals later on. I do not much care for the annual part, but some spring-flowering bulbs growing up through some of the other plants will not look out of place by any means.

The best time to plant herbaceous perennials is in early fall and every year many of the varieties are better to receive more or less attention in the way of division. The first winter after planting they should be well mulched to prevent heaving with the frost and, in fact, many



ESTABLISHMENT OF P. L. LARSON, FORT DODGE, IOWA.

species will always winter better if mulched. I do not propose to lengthen this article with the requirements of every species that I am going to mention, but a few remarks as I pass along may prove of interest.

Of the spring and early summer plants I will mention Anemone Pennsylvanica and A. Pulsatilla, Alyssum saxatile, the showy Anchusa Italica, with its abundance of blue; Anthericum Liliastrum, the pretty St. Bruno's lily; aquilegias in variety, from the pretty little A. alpina on through the season, with A. Canadensis, A. cœrulea, A. chrysantha and the many hybrids; Arabis albida, Baptisia australis, Belamcanda Chinensis, followed by its blackberry-like fruit; Callirhoe involucrata, a pretty poppy-like plant of trailing habit; campanulas in variety, Centaurea macrocephala, one of the best border plants; Delphinium Chinense, D. Cashmerianum, D. formosum and the many hybrids; Dianthus plumarius and its many varieties, Dianthus barbatus, Dicentra eximia and D. spectabilis; Digitalis purpurea, D grandiflora and D. ferruginea gigantea; Epimedium alpinum and E. alpinum rubrum; Eryngium planum and E. amethystinum; Geranium maculatum, Helenium Hoopesii, Hemerocallis flava, with its yellow blossoms, followed later with such varieties as H. Dumortierii, with orange yellow flowers, H. fulva and its double variety, H. fulva Kwanso, with reddish yellow flowers, and perhaps the best variety, the Japanese H. aurantiaca major; Heuchera sanguinea, the pretty coral bells, and its varieties, H. sanguinea alba and H. sanguinea splendens; Incarvillea variabilis and I. Delavayi, with gloxinia-like flowers, one of the finest border plants in cultivation; Lychnis Flos-cuculi, L. semperflorens, L. Viscaria splendens, L. vespertina flore-plena and the pretty Haageana hybrids; Œnothera Fraseri, followed by Œ. macrocarpa and later by Œ. Youngii and Œ. riparia; Papaver orientale, perhaps the most showy of all the border plants; Pentstemon barbatus, potentillas in many hybrid varieties; Pyrethrum roseum in variety; Salvia pratense; Spiræa astilboides, S. palmatum, S. lobatum and S. aruncus; Stokesia cyanea; Thermopsis Caroliniana; Tradescantia Virginica and varieties; Veronica gentianoides and V. spicata.

These plants may be followed by the following later blooming varieties, many of which commence to bloom at midsummer and continue till frost: Achillea Eupatorium, with large yellow flowers; A. Millefolium rubrum, A. Ptarmica plena The Pearl and A. tomentosa, of dwarf habit and bright yellow flowers; Aconitum Napellus and A. autumnale; Agrostemma coronaria; Anemone Japonica and its varieties, Rosea, Brilliant, Queen Charlotte and Whirlwind; Anthemis tinctoria and A. Kelwayi; Asclepias incarnata, A. speciosa and the pretty A. tuberosa; asters in great variety, from the pretty A. alpinus to the lovely A. Novæ-Angliæ, of which we have shades of almost red, white and blue; Bocconia cordata, a showy plant of tall habit; Cassia Marylandica; Boltonia asteroides and B. latisquama; Chelone Lyonii; Clematis Davidiana; Coreopsis grandiflora, C. verticillata, C. delphinifolia and the taller C. tripteris; Desmodium Japonicum and D. penduliflorum; Dictamnus Fraxinella and D. Dahurica; Eupatorium ageratoides, E. cœlestinum and E. purpureum; Gaillardia aristata and many hybrids; Gypsophila paniculata, Helianthus multiflorus flore pleno, H. giganteus and H. Maximiliani, the beautiful golden yellow of H. mollis and H. rigidus var. Miss Mellish; Helenium autumnale and H. grandicephalum striatum; Heliopsis lævis and H. Pitcheriana; Hibiscus Moscheutos and H. Crimson Eye; Lathyrus grandiflorus, L. albus and L. latifolius; Lythrum Salicaria; Liatris spicata, L. pycnostachya and L. scariosa; Lychnis Chalcedonica and L. alba; Monarda didyma and M. purpurea; Platycodon grandiflorum, P. album and P. Mariesi; Polygonium cuspidatum and by far the most useful variety P. compactum; Pyrethrum uliginosum; Rudbeckia purpurea, R. speciosa, R. subtomentosa, R. laciniata and its double form, R. Golden Glow; Salvia azurea grandiflora; Silphum laciniatum and S. asperrimum; Statice puberula, Scabiosa Caucausica and S. sylvatica; Tritoma uvaria, T. Pfitzerii and T. caulescens; Veronica Arkansana Baldwinii and V. hybridum; Yucca filamentosa; Veronica longifolia and V. longifolia subsessilis.

There are many more plants that may be added to the border, such as the different eulalias, bambusas, etc. Then I have a few more to speak of, the hollyhocks, hybrid phloxes and pæonias, of which there are an endless variety; then the irises, commencing in the early spring with the pretty little I. cristata and I. pumilla on through the many species to I. Germanica, I. Sibirica and the lovely I. lævigata. Lastly, let me mention the most gorgeous of all, which would require a whole chapter to themselves. I refer to the lilies. They will give a continuous variety of blossom through the whole season from the early coral Siberian tenuifolium through the many beautiful native and other species to the glorious Japanese forms of elegans, speciosum or auratum.

CLUB PARTAKES OF ANNUAL BEEFSTEAK — BUSINESS SESSION HAS TO DO WITH EXHIBITION —THORNE HAS GREAT SUCCESS WITH CARNATIONS.—SCOTT PAYS BETTER THAN NEW SORTS.—SCHULTHEIS SHOWS GOOD PLANTS.—TAYLOR WILL PLANT LIBERTY CLOSER —ROSES DO NOT LIKE STEAM PIPES IN THE BED.—MANY NOTES OF INTEREST.

The second annual old-fashioned beefsteak dinner of the New York Florists' Club came off on schedule time last Saturday evening and the sixty or seventy participants got full value for their money. Julius Cæsar Lang as High Steward, in his white coat and cap, was a jewel of the first water, and a classical programme prepared, it is surmised, by the Honorable Patrick O'Mara, told all about what Julius was going to do for the inner as well as the spiritual man. The programme of "The Coming of the Steak," "Rushing the Growler," "More Steak," "And Now Cometh Beer," The Beefsteak Goeth Merrily 'Round," "Carbonated Waters are Now Due," "'Tis Now Time for Chops," Rigs o' Barley," etc., was well interspersed with verses, quoted and original, appropriate to the occasion, among the original ones being the following, also attributed to Mr. O'Mara:

When man essayed to name this flower,
So fill-d was he with admi ation
He cried, Divine! This very hour
I hail thee, dear, my sweet carnation.

The rose, orchid, chrysanthemum and violet were honored in similar manner. During the serving of the viands an excellent entertainment was given by W. J. Cooke, songs; The Great Hurd, magic; Prof. Max Stern, violin solo; Jack O'Donnell, dialect stories; Chris. Green, songs; J. A. Dunn; mimicry; Tommy Baker, songs, and the orchestra. Messrs. Patrick O'Mara, E. E. Bogan, Lawrence Hafner, A. H. Langjahr and C. W. Ward assisted the magician to resurrect eggs, cards, canaries and other implements of his office, much to their own mystification and the merriment of the audience.

At the meeting of the New York Florists' Club last Monday exhibition preparations claimed most of the attention of the members present. The schedules are almost ready for distribution. It was decided to eliminate the flower booth and selling privilege. The exhibition committee has been in correspondence with the National Sculpture Society, considering a combined exhibition. If satisfactory arrangements can be made the result would be a unique exhibition and one of unusual interest. Entries for the prize of $100 for an acceptable plan of arrangement must come to the committee in sealed envelopes, the identity of all contestants to be concealed until the award is made. The time limit on entries is set for noon on July 1. Wm. Plumb was appointed exhibition manager. Eleven new members were elected at this meeting and C. W. Ward showed Joseph H. Manley carnations, which received a certificate of merit.

Carnations at A. L. Thorne's greenhouses in Flushing are well worth going to see. Mr. Thorne seems to have struck his destiny when he decided to devote some of his best houses to carnation growing and it is not surprising that one more rose house is to know the Bride and Bridesmaid no more and its stretch of 317 feet is to be, next season, an expanse of Lawson, Prosperity and other noble examples of the divine flower. Among the varieties that are especial favorites with Mr. Thorne because they grow well, flower profusely and sell well are the two varieties above named, also Marquis, G. H. Crane, Genevieve Lord, Mrs. Bradt and, last but not least, that perennial favorite, Wm. Scott. The figures show, too, that the Scott house is the best-paying house in the range this season. Crane is, and has been, a veritable forest of buds ever since November, some of the stems nearly three feet high. Mr. Thorne's theory regarding the Marquis and its reputed tendency to go to sleep is that it should never be marketed directly after picking, but should be given twenty-four hours with the stems in water, when it will be all right and give no trouble as to keeping. Norway is unsatisfactory with him. It comes more or less mottled with pink, enough to injure its use as a white variety but not enough to please as Prosperity does. Ballahoo Girl is the name Mr. Thorne has given to a very bright deep cerise seedling now in its second year. It is said to be a cross between Genevieve Lord and Wm. Scott, the latter being the seed parent. It bears stems of remarkable length but rather deficient in stiffness.

At John H. Taylor's place in Bayside Lawson and Prosperity are both exceedingly fine and covered with buds. Marquis is also all right. Genevieve Lord is criticised here as being rather slow. Gomez, White Cloud and Crane are all giving good satisfaction. Roses are in their customary good form, with a mighty crop of Brides and Bridesmaids in prospect. Mr. Taylor will plant Liberty closer together in the beds next season, reducing the space for each plant from fifteen inches to ten inches, because of its upright, fastigiate growth. He has lost a number of rose plants in the beds through which pipes are run to give bottom heat. These plants were all right and led a strenuous life until, apparently, the tap-roots reached the hot pipes. Mr. Taylor will run the pipes through round tile next year to prevent a recurrence of this disaster.

A. Schultheis is at it again and if present indications count for anything he will have the finest lot of trained Crimson Ramblers ever seen in this market, not to mention ericas in several beautiful species and azaleas innumerable. Some of the earliest of the Ramblers will be in bloom in two weeks. The azaleas here are all grown now in the short pots which are two-thirds the usual height of flower pots. A bench of oranges, Florida-grown, gives notice that the day for imported orange trees is gone and that hereafter the native product will rule the market. Lilies look luscious and promising but they are interspersed with just enough runts to show that the disease is still doing business at the old stand.

One of the most effective floral pieces ever placed in a florist's window was shown in Thorley's one day last week. It was a large mound of double orange calendulas, with a lot of wall flowers massed in one section, with Asparagus Sprengeri for green and a very chic bow of black velvet. It attracted a big crowd of Broadway passers.

Miss Boulanger, the sunlight of whose smile illumines the recesses of Cleary's auction rooms, has become the president of a bachelor girl's club, whose rules are very strict. That takes courage; and Valentine's day so near, too!

The employes of Hitchings & Company had their annual reception and ball at Jersey City on the night of February 11. The affair was equal to the best of its predecessors.

J. B. Davis, the genial ex-secretary of the N. J. Floricultural Society sailed on February 8, on the Celtic, for Palestine, Egypt and other Mediterranean points of interest. He will return latter part of April.

Business continued fair until Wednesday, the beginning of Lent and a national holiday. Carnations are weakening somewhat. Cattleyas and lily of the valley are showing increasing strength.

Nelson Bogne, of Batavia, N. Y., was here last week on his way to Cuba. Other visitors were Lewis Chase, Rochester; Jos. H. Rebstock and wife, Buffalo, and Fred. Brietmeyer, Detroit.

The greenhouses of Adolph Kayser, on Sanford avenue, Harrison, N. J., were damaged by fire to the extent of about $500 and many plants killed on February 5. No insurance.

Boston.

GARDENERS' CLUB DISCUSSES ROSE GROWING —TRADE BRISK IN THE DAYS BEFORE ASH WEDNESDAY.—BIG CUT OF ROSES IN PROSPECT — AGITATION AGAINST THE BROWN TAILED MOTH.—AT HORTICULTURAL HALL.—VARIOUS JOTTINGS.

The February meeting of the Gardeners' and Florists' Club on Tuesday, February 11, was devoted to an interesting discussion of some phases of rose growing, particularly the question of superiority in grafted stock for roses under glass and the experience of members with different kinds of stock. F. R. Mathison opened the discussion by a consideration of the conditions existing at the time the present system of planting grafted roses was generally adopted, when roses of the Mermet class had, through over propagation, high temperatures and excessive stimulation for years, became greatly weakened in constitution. He contrasted conditions between the present and the methods of growing worked roses prevalent at the beginning of the commercial rose forcing industry and expressed a preference for budded over grafted stock, because larger wood can be used. He said pointedly that the Manetti was the salvation of the Bride, Bridesmaid and Mermet roses, and gave it as his belief that in establishments of 20,000 feet of glass and upwards it is easier to keep up stock by grafting than by cutting propagation. Alex. Montgomery told of his experiments in former years with seedling briar, multiflora, Banksia and Tailby stock, all of which had proved failures, and his adoption of the Manetti as a stock many years before it became generally known that the roses at Waban were not grown on own-root plants. Answering a question regarding sterilized soil, he replied that he has tried it on a small scale. It has one advantage, that of keeping down weeds. Undoubtedly a good many soils would be benefited by sterilizing, and he believes the subject worthy of further investigation. Wm. Donald stated that the grandest crop of roses he ever saw was grown on multiflora stocks, but that one crop was all the plants ever produced, and he was convinced that while multiflora might be all right for hybrid remontant roses it is valueless for teas. Kenneth Finlayson, Chas. Sander, M. H. Morton and W. J. Stewart also participated in the discussion.

The nests of the brown-tailed moth are seen in myriads on the trees and shrubs in the fields and gardens throughout Somerville, Newport and portions of Cambridge and adjoining towns. These nests, containing from 200 to 1,000

young caterpillars each, are generally found near the tips of branches and can therefore be easily and quickly cut off with pruning shears and burned. Owing to the irritation of the skin caused by the detached hairs of the caterpillars, where they are abundant, requiring sometimes the services of a physician, the question of the destruction of these pests becomes one of self-defense and it would seem that those people who are not sufficiently public-spirited to do their share in protecting the community ought be influenced by the necessity for self-protection.

The wind-up of the season preceding the beginning of Lent is characterized by the customary rush and the demand for flowers is on with a vengeance. The city florists are pushed to the limit with business and the wholesalers find it impossible to get sufficient of the right kind of material to supply the call which is coming in from all sides and from distant points that have not been heard from since Christmas and may not be heard from again until Easter. But it will not last long and the recent short crop on roses is a good indication that we may look for an abundance in the sunny spring days soon due.

At the funeral services of a prominent merchant last Monday, the floral tributes made an imposing display. As indicating the present taste here in the matter of funeral designs it is noticeable that the tributes on this occasion consisted of a score of wreaths of varying sizes, ten flat bunches and one cross. The wreaths were in no case "mixed" wreaths but were made of two or, at most, three varieties of flowers only, such as lilies and violets, carnations and orchids, galax and roses, ivy and lily of the valley, etc.

At Horticultural Hall, on Saturday, February 8, there was a nice little show of freesias from Col. Chas. Pfaff, Primula obconica from Mrs. B P. Cheney, Primula Sinensis and camellias from Mrs. J. L. Gardner, carnations from M. A. Patten, A. Roper and Miss H. B. Winter and orchid flowers from Mrs. Gardner and Col. Pfaff. Mrs. Gardner was awarded a silver gilt medal and Col. Pfaff a silver medal for the orchids.

The Boston party for the carnation meeting at Indianapolis, as now made up, will consist of Wm. Nicholson and daughter, M. A. Patten, C. Warburton, Peter Fisher, Wm. Sim and S. J. Reuter. They will leave at 4:30 p. m. on Monday, via Boston & Maine and West Shore railroad. Messrs. Alex. Montgomery, Jr., and Wallace R. Pierson will take the trip via Washington and Cincinnati.

Fred. Breitmeyer, of Detroit, spent a couple of days here the first of this week and visited Waban Rose Conservatories. Other visitors were Paul Berkowitz, of Bayersdorfer & Co., Philadelphia; H. W. Gibbons, New York; E. J. Harmon, Portland, Me.; Mr. and Mrs. S. S. Pennock, Philadelphia, and E. H. Chamberlain, New Bedford, Mass.

Cincinnati.

TRADE VERY BRISK AND SUPPLIES SHORT IN MANY LINES.—ILLNESS IN THE TRADE. —A WEDDING —OTHER NOTES.

Trade is first-class, with not near enough flowers to fill orders. Roses appear to be off crop generally, which accounts for the ready sale of other flowers Violets also are in great demand and those received sell on sight. Bulbous stock is arriving in larger quantities and sells well. Harrisii lilies are ordered in advance and of course there are not near enough to go around. There is smilax and adiantum for all orders received.

There have been any number of florists on the sick list the past two weeks, but from last reports all are convalescent. Frank Ball and J. A. Peterson were ill and the children of Ben. George and Geo. Murphy were down with the measles.

Charles McCrea, head clerk for Hardesty & Co., stole a march on his friends last Thursday and was married to Miss Irene Rogers, the charming daughter of Mr. and Mrs. James Rogers, of Newport, Ky.

The bulb men have arrived, the first making his appearance last week.

H. M. Altick, of Dayton, O., was a caller this week. D.

Chicago.

TRADE LIVELY AT THE ENDS OF THE WEEK.—ROSES NOW MORE PLENTIFUL. WHITE CARNATIONS IN GOOD DEMAND.—PINKS ACCUMULATE.—TOO MUCH BULBOUS MATERIAL.—FIRE MAKES TROUBLE FOR WHOLESALERS.—DEALERS MAKING NEW LEASES.—VARIOUS NOTES OF MORE OR LESS LOCAL INTEREST.

Beginning with the end of last week, trade has been very lively in this market, there being a large demand from the south, particularly from New Orleans for the Mardi Gras festivities. But roses have become more plentiful, with the possible exception of good American Beauties, and it is now possible to meet requirements, with few exceptions. Beauties are neither very plentiful nor very good, but the price is showing a downward tendency in keeping with other rose values. There are now Brides and Bridesmaids enough to go around and the prospects are for very heavy crops in the near future. The new price lists show a cut on these items, and it is probable that in a few weeks values will be reduced a good deal, but on the part of the growers and handlers the increase in receipts will for a time counterbalance the fall in prices. As to carnations, there were thousands remaining unsold along in the middle of the week, but none of these were white. This market has seldom known heavier carnation receipts than at the present time, but all the whites are used up at good figures, the pinks being the ones which drag. The carnation growers are already feeling the absence of the street fakirs, for with the Greeks working there would be an outlet for this material at some price, but with conditions as they are, the retailers have no use for the large quantity of material coming in, no matter what the figures may be. With milder weather violets are moving rather better than within the past two or three weeks, but at no high values. There are oceans of bulbous stock, and it is hardly moving at all. La Reine tulips are seen on every hand in the wholesale market, and in most of the store windows, but the receipts are so heavy that no fairly remunerative use can be found for all of them, and the same is true of daffodils, narcissi and Roman hyacinths. Lily of the valley is also plentiful but moving fairly well at low prices.

At the meeting of the Florist's Club February 12, the transportation committee reported that the Pennsylvania railroad had been selected for the trip to Indianapolis. The train leaves the Union depot February 18 at 8:40 p. m., the fare for the round trip being $6.70. This train arrives at Indianapolis at 4 a. m. February 19, and berths may be reserved on application to E. F. Winterson, 45 Wabash avenue. For the benefit of those who may not be able to make this train, it was stated that the fare for the occasion will be the same on all trains and railroads running to Indianapolis. The entertainment committee reported progress and was instructed to arrange for a concert and ball early in April. A. Jurgens exhibited good examples of lily of the valley, Dutch hyacinths and narcissi. The lily of the valley and his Grand Maitre hyacinths were especially fine, the latter having three and four good spikes per bulb. These two exhibits were awarded the usual first and second prizes, respectively. In answer to a question, Mr. Jurgens stated that blue hyacinths sell best. J. D. Thompson, of Joliet, was elected to membership.

When the firemen had finished pumping into the burning Sandford block last week, nearly two feet of water had run into E. C. Amling's store and he was two days in getting things fixed up in business shape again. In the meantime he had counter space at E. H. Hunt's and was able to take care of his shipping trade in fairly satisfactory fashion. The insurance company is rebuilding his ice box, which was pretty well soaked up, but otherwise his loss was not heavy. Kennicott's were driven out of their store during the half day the fire raged, and suffered some damage from water, principally on wire work.

There is now assurance of a party of at least twenty-five local carnation men and others who will go to Indianapolis next Tuesday evening, leaving here at 8:40 on the Pennsylvania railroad. Those from near-by towns or the west, who will be passing through Chicago, are invited to join the Chicago delegation.

C. L. Washburn and Andrew Benson will go to Indianapolis next week with exhibits for nearly every class on the schedule. It will be the first time that Bassett & Washburn have figured in the exhibition of the American Carnation Society, and their stock is so good that their presence will add materially to the interest.

Weiland & Risch say that Marquis is the best carnation they have thus far grown, but that it is only now giving a heavy enough cut to be profitable. They say that Mrs. Lawson is a wonder as a producer at their place.

The Kennicott Brothers Company has made a five years' lease on its present quarters, with the addition of about one-third more space. During the summer they will remodel to a considerable extent, rebuilding the cold storage room after modern principles.

A. L. Randall has made another year's lease on his present quarters, this time with A. Montgomery Ward, who recently bought that corner from C. W. Marks for $600,000.

A. Lange says that despite the talk of a sixteen-story office building on his corner, he has a lease which will keep him in his present quarters until 1905.

Warren Garland, at Des Plaines, is rejoicing in the arrival of another son. He now has two boys and two girls.

B. Eschner, of M. Rice & Co., Philadelphia, expects to visit this city the first week of March.

John Degnan, of Vaughan's Seed Store, has been on the sick list this week.

Visitors: C. R. Hills, Grand Rapids; C. W. DePauw, New Albany, Ind.; S. S. Skidelsky, Philadelphia.

THE AMERICAN FLORIST

SEVENTEENTH YEAR.

Subscription, $1.00 a year. To Europe, $2.00. Subscriptions accepted only from those in the trade.

Advertisements on all except cover pages, 10 Cents a Line, Agate; $1.00 per inch. Cash with Order.

No Special Position Guaranteed.

Discounts are allowed, **only on consecutive insertions**, as follows—6 times, 5 per cent; 13 times 10 per cent; 26 times, 20 per cent; 52 times, 30 per cent.

cover space sold only on yearly contract at $1.00 per inch, net, in the case of the two front pages, regular discounts applying only to the back pages.

The Advertising Department of the AMERICAN FLORIST is for Florists, Seedsmen and Nurserymen and dealers in wares pertaining to those lines *only*.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Wednesday to secure insertion in the issue for the following Saturday. Address

AMERICAN FLORIST CO., Chicago.

THE manufacturers are working overtime making thumb pots.

GET a certificate when you start for Indianapolis; it costs nothing but the asking.

IN view of the frequency of recent fires it seems that a man who isn't insured is taking long chances.

KENTIAS will shortly be in demand for growing on; well grown plants will be good property next fall.

THE plantsmen are all looking for a big spring business to open as soon as settled milder weather comes.

DAVID SYME, manager of the well known firm of Peter Lawson & Son, Edinburgh, Scotland, died January 25.

THE date at which your subscription expires is shown on the address label on your paper. Our aim is to merit prompt renewal.

THERE will be no surplus of good geraniums this spring; but there are always too many mis-shapen plants of inferior varieties.

IN the Helen Gould-Balduin rose matter we are in receipt of a communication from Myers & Samtman, of Philadelphia, with regard to their connection with the sale of the rose Columbia. Some further particulars being necessary to include all facts, the document is held over until they are received.

Inestimable.

ED. AM. FLORIST:—Enclosed find $1 for which please send your paper to me for another year. It is of inestimable value to any florist. L. P. LORD.

Owatonna, Minn.

Indianapolis Hotels.

The following are the hotels which the Indianapolis reception committee recommends to those who will attend the approaching convention of the American Carnation Society:

EUROPEAN PLAN.

Lorraine, single, per day	$ .75 to $1.00
" double, per day	1.00 to 1.50
Ouenda, per day	.50 to 1.00
Lorette, per day	.50 to 1.00
Denison, per day	1.00 to 3.00

AMERICAN PLAN.

Spencer per day	$2.00
Circle Park, per day	1.50
Lorette, per day	1.50
English, per day	$2.00 to 2.50
Denison, per day	2.00 to 5.00
Grand, per day	2.00 to 4.00
Occidental, per day	2.00

Greenhouse Building.

Utica, N. Y.—W. A. Rowlands, two houses.

Wauwatosa, Wis.—A. Klokner, range of houses.

Wyndmoor, Pa.—Myers & Samtman, range of houses.

Mt. Clemens, Mich.—James Taylor, house 20x150.

Minneapolis, Minn.—Hans Rosacher, range of houses.

New Haven, Conn.—Mrs. Wilbur, conservatory.

"Bodock, Which Never Rots."

ED. AM. FLORIST:—In reference to a paragraph in a late issue of AMERICAN FLORIST, concerning "bodock," a wood that never rots, I would say that the name is a corruption of bodark, which latter may be considered a legitimate vernacular contraction of bois d'arc or bow-wood, the name given by the French settlers of the southwest to the osage orange (Maclura aurantiaca) on account of the tough, hard wood being used by the Indians for making bows. Osage posts have the reputation of being as durable as yellow locust, but trees large enough for the purpose are always scarce, osage being generally seen in the form of a shrub or hedge plant. It grows to a good size if given room in rich soil and makes a handsome, round-headed tree. Bodark is a name commonly used throughout the territory represented by the Louisiana Purchase and is entirely allowable in place of the barbarous "bodock." W. VAN FLEET.

Piping a Range.

ED. AM. FLORIST:—I am planning to build two houses 18x100 and a lean-to 5x100, running south from the office and boiler shed, which is 20x43. The west wall of the rose house will be five feet high, and in this house 55° is required with 10° below zero outside. The carnation house will have no outside wall and here only 45° to 50° is required. Violets at 40° will be grown in the lean-to on the east side. In each of the eighteen-foot houses there is a wide center bench and two side benches. In heating with hot water will it do to put all the pipes, 2-inch wrought iron, under the side benches, say twelve in the rose house and eight in the carnation house, with two in the lean-to? Is is it more economical to use 4 inch cast iron pipe than 2 inch wrought iron? Will an expansion tank over the boiler and an air valve on the farther end of each coil be sufficient? H. K.

Ordinarily the cost of 4-inch cast iron pipe will be more than for 2-inch wrought iron, and there will be greater danger that it will leak at the joints. The rose house can be heated by means of eight 4-inch pipes or twelve 2-inch; in the carnation house six 4-inch, or nine 2-inch, will answer, and for the violet house two 4-inch or three 2-inch will be needed. For the 4-inch pipes it is well to have as many flows as returns, but one 2-inch flow will suffice for two 2-inch returns. If the flow pipes run down-hill, and the expansion tank is connected with the highest part of the system there will be no occasion for using air valves. With the flow pipes running up hill an air valve will be needed at the farther end of each coil or, better yet, run a ½-inch pipe from the highest part of each coil to a height greater than that of the expansion tank. All of the pipes may be under the side benches. L. R. TAFT.

Capacity of Flow.

ED. AM. FLORIST:—I have a house 20x100, even span, running north and south, boiler at the north end, the two overhead flows being 3-inch wrought iron pipe. Will these, carrying considerably more water than 3 inch tubing, supply eight 3 inch boiler flue pipes, four under each bench? G. H. P.

A 3-inch overhead flow pipe will handle 600 square feet of radiation, and, as there will be considerable less than this in the four 3 inch boiler flue pipes, there should be no difficulty about heating the house as proposed. L. R. T.

Forcing Rhubarb.

ED. AM. FLORIST:—I have two large mushroom pits where the crop is off and wish to plant some winter rhubarb in them. Do you think it would grow in these pits? How should I proceed? The temperature of the pits is from 40° to 50°. S.

The mushroom pits mentioned by your correspondent should prove ideal places in which to force rhubarb if the necessary heat can be given. A temperature of 40° to 50° is folly 15° too low, and if he cannot heat his pits to a higher figure, we would not recommend him to try rhubarb forcing. If by the use of additional fire heat, or fermenting material, a temperature of 55° to 65° can be maintained, "S" can produce good rhubarb. Roots not less than three years old should be used. Lift the roots carefully, standing them quite close together and throw a little fine loam over them, giving a watering to settle it, and water occasionally if the soil dries out. Like mushrooms, rhubarb is better forced in the dark. Of course roots placed in a temperature of 40° to 50° now, would come in ahead of outdoor stock, but would hardly prove a remunerative crop.

W. N. CRAIG.

Plan for Piping.

ED. AM. FLORIST:—We are building an office, cut flower room and workroom 14x20 feet, with three greenhouses to the west, first a propagating house 6x50 feet, then two houses each 20x50 feet. The boiler is in the basement under the workroom. How shall we pipe these houses, using 2-inch flows and 1-inch returns, of which we have a plenty? The lowest outside temperature is 25° below zero. Of course we wish the pipes laid so that they will not be in the way. We wish to use one house for roses and the other for carnations; what temperature will be required for each? Z. & S.

The temperature for roses and carnations depends upon the varieties grown, but for most roses 58° to 60° will give good results while 50° to 53° will answer for carnations. It is hardly advisable to use 1-inch pipe for hot water heating, but in 50-foot houses it will answer with overhead flow pipes and the top of the boiler well below the surface. For the rose house use three 2-inch flows and twenty-one 1-inch returns. In the carnation house three flows and fifteen returns will be needed. Place one flow on each plate and the other on the center posts. In the propagating house use one 2-inch flow, on either the plate or the back wall, and eight 1-inch returns under the bench. To reach the houses from the boiler run a 4-inch pipe directly south from the boiler just beneath the level of the walks. In the propagating house a

2-inch flow pipe could be taken off and the pipe could then enter the next house, where three pipes could be taken off and the main flow could be reduced to a 3-inch and then continue on into the last house, where the flow pipes could be supplied in the same manner as in the other houses. The returns should run to the west end of the house, where they should connect to the main return, which should be of the same size as the main flow pipe.

L. R. TAFT.

Boiler Capacity.

ED. AM. FLORIST:—I have a tubular boiler twelve feet long and three feet in diameter, containing twenty-six 3-inch flues. Please give the horse-power of the boiler and state whether it will heat a plant of 12,000 square feet of glass to 60° in zero weather, the house being eleven feet to the ridge, with 4-foot side walls. SUBSCRIBER.

A boiler like that described would be rated at about twenty horse-power. If 12,000 square feet represents the total amount of glass in the roof, sides and ends of the houses, about 2,500 square feet of radiating surface will be required for economy in coal consumption and attendance. When a boiler is fifty horse-power, or larger, it may be expected to handle 100 square feet of radiation for each horse power, but for smaller sizes the use of a smaller ratio is advisable, and for 2,500 feet of radiating surface it will be best to have a thirty horse-power boiler. Whether it will be better for "Subscriber" to attempt to use his present boiler, or purchase a larger one, is mainly a question of circumstance and climate. A boiler is desired for a temperature of zero. In many places where the mercury drops to zero it is but occasionally during the winter, while it is 20° or more above zero for most of the time. For 20° above zero the present boiler would answer, and if it is in good condition it might be better to give it a little more attention and fuel in zero weather, than to go to the expense of a new boiler.

L. R. TAFT.

OBITUARY.

GUSTAVE BROSE.

Gustave Brose, the senior member of the Brose-Fleur Seed and Plant Company, of Los Angeles, Cal., died February 4 of pneumonia. Mr. Brose was born in the Province of Hanover, Germany, forty-seven years ago. His father was a Lutheran minister and his only brother is in the same profession. Gustave Brose was highly educated and was an expert seedsman. For eleven years, from 1888 to 1899 he was in the employ of the Germain Fruit Company, as manager of the seed and plant department, where he gave entire satisfaction to his employers and made hosts of friends among his customers, and by his wide circle of acquaintances both in Europe and America, the business was very prosperous under his management. Mr. Brose resigned this position three years ago to engage in business with E. Fleur. The firm has worked up a very nice trade. All the time he could spare from the store was spent in his garden. He was very successful in hybridizing centaureas and introduced several improved varieties two years ago. Mr. Brose leaves a widow and two children, who, we believe, are his only relatives in this country.

Pittsburg.

SEVERE WEATHER SURROUNDS FLOWER AND PLANT TRADE WITH DIFFICULTIES. —MANY NEW PRIVATE GREENHOUSES.

Two cold waves in succession, with the thermometer registering zero, is what Pittsburgers have had to contend with the past two weeks, and several of the small growers had difficulty in keeping the frost out of the houses, as was also the case with some of the private conservatories where gas is used. The enormous quantity consumed in dwellings made the supply weak. Retailers report a fair business for last week, azaleas, narcissi, Romans and lily of the valley being plentiful, with a medium supply of Harrisii. Randolph & McClements had some good decorations, also several orders for funeral work.

George W. Oliver, the publisher, has just completed a large greenhouse for general stock, built by a local firm but heated by Hitchings. Mr. Oliver's brother, at Sewickly, is also building a range of houses. Lord & Burnham have the contract.

Mr. Lincoln, of Amberson avenue, is having an addition put to his houses, one a growing house and a lean-to for propagating. Hitchings has the contract for the heating. When finished this will make a pretty and complete range.

Mr. Park's conservatory is near completion. In the center of the palm house is a raised electric fountain, the first of its kind put up in Pittsburg.

A. Wood, of McKeesport, is closing his conservatories and his plant collection is for sale. D. D.

Lincoln, Neb.

Since last report we have had very bad weather, the past three weeks being very cold, not warming up enough on many days to clear the glass of ice. Notwithstanding this there has been a good supply of stock and demand enough to use it all up; in fact, some days we had to go through the houses and pick odds and ends for funeral work, of which there has been much. Primula obconica, cyclamens and freesias are liked by customers in made up work. Every one is happy, with no complaints except to the coal man. C. H. F.

LOOMIS, CAL.—The Loomis Floral Company is not successor to the Mitting Floral Company, but a new and separate concern.

THE SEED TRADE.

AMERICAN SEED TRADE ASSOCIATION.

J. E. NORTHRUP, Pres.; S. F. LEONARD, Vice-Pres.; S. F. WILLARD, Wethersfield, Conn., Sec'y and Treas.

Twentieth annual convention, Twin Cities, Minn., June, 1902.

VISITING NEW YORK: D. M. Ferry, Detroit.

FRED BATCHELER, of Utica, N. Y., died February 5.

AN inch and a half of rain has fallen in Southern California.

VISITED ST. LOUIS: Fred. H. Hunter, of the Cox Seed Co., San Francisco.

Wm. F. DREER, of Philadelphia is spending the winter at Pasadena, Cal.

THE widow of George S. Haskell, pioneer seedsman of Rockford, Ill., died in Europe last October.

W. B. HAYT, formerly with the Cleveland Seed Company, is now with the Jerome B. Rice Seed Company.

W. ATLEE BURPEE is the first name on the new list of directors of the Association of American Advertisers.

ONION set prices are easier, yellows $1.40 to $1 50, whites and reds $1.75 to $1.85 per bushel in good sized lots.

ALEX. RODGERS, of Chicago, has the sympathy of the trade in the loss of his wife. Her death occurred last week. She had been in the hospital for some weeks.

THE Israel Seeded String Co., of Wichita, Kans , is placing on the market a seed planting device in which seeds are wrapped in a long string of tissue paper for planting in the home garden.

VISITED CHICAGO: Wm. Ewing, Montreal, Can.; D. I. Bushnell, St. Louis; Herbert A. Clark, Milford, Conn., Frank C. Woodbury, Orange, Conn., en route to the canners' convention at Milwaukee.

DUTCH bulb prices, compared with last year, are reported as likely to run as follows: Hyacinths cheaper; Von Sion narcissi about the same, others lower; tulips, forcing sorts, ten to fifteen per cent higher, red highest.

QUITE a number of seedsmen have attended the meeting of the Canners' Association at Milwaukee this week. W. R. Roach, representing Jerome B. Rice & Co., of Cambridge, N. Y., was a prominent figure in the affairs of the meeting.

THE executive committee of the American Seed Trade Association will meet in Chicago to-day (Saturday), Albert McCullough, chairman, W. S. Gilbreath, Chicago; S. F. Willard, Wethersfield, Conn.; Mel. L. Webster, Indepeudence, Ia.; H. W. Johnson, Philadelphia; M. S. Griffith, Baltimore.

Philadelphia.

ASH WEDNESDAY COMES AFTER A WEEK OF UNUSUAL ACTIVITY.—SPLENDID STOCK IN MOST LINES —LIBERTISS ARE HARD TO GET.—BULBOUS STOCK VERY PLENTIFUL.—GREENS TAKEN AT SIGHT.—MANY BLOOMING PLANTS.

The season has wound up with a sort of a rush, there having been a good demand for all kinds of flowers and a particular scramble for Beauties. A great many social functions were crowded into the week before Lent, but with a little pushing they were all handled in a creditable manner, at least as far as the floral part was concerned. Everything seems now to be at its best, Bridesmaids and Brides being particularly fine. Seldom have we seen better Bridesmaids than the extras or double extras, as they are called, that are now to be seen in some of the stores. There are some fine Liberties, but the Scott greenhouses are a bit shy just now, as it is grafting time with them and the buds have to suffer, or rather the fellows who want them must, so that next year's supply may be obtained. Carnations are also at their finest, all the principal kinds being in good supply and of a grade that a few years ago would have been prize winners at the shows. Violets seem to move fairly well, although the supply is quite large. Lily of the valley is crowding in pretty fast and some of it gets a little soft, or at least the price does, before it is moved. Boulbous stock is, or has been, a little too plentiful, tulips and narcissi being sent in the last week as if there was no future for them. Some good freesias have been seen and have met with a ready sale. There has been a great scarcity of greens. It seems as if there are always enough buyers about the commission houses to use up a box of green as soon as it is opened. Adiantum is particularly scarce. With such a demand as has been shown this winter growers should certainly plant more of this stock. Perhaps Brother Elliott, of Boston, might be persuaded to open a branch here. He would find no market here to send it to and would have to carry it around from store to store, in the slow old Philadelphia way, just as he did when he was here some twenty years ago.

Great quantities of blooming plants are now coming in and all in first-class shape. Harris has rhododendrons flowered very well, also genistas and azaleas. All bulbous stock is also sent in pans and these, with Primula obconica and cinerarias about make up the assortment.

Daniel Long, with his plant ulsters, was in town last week. These quick coverings look like a very good thing and should be given a trial, at least, by all decorators.

Myers & Samtman are about to erect a large addition to their plant, which will increase its capacity about fifty per cent.

K.

Minneapolis.

TRADE NOT ACTIVE BUT ROSES MUCH SHORT OF THE DEMAND.—VIOLETS ALSO SHORTENING UP.

Trade has been rather quiet the last seven days, except for a few decorations and funerals, the call being mostly for light colored flowers. There is an unprecedented scarcity of tea roses and it seems impossible to secure them, while carnations are in ample supply. Romans, daffodils and tulips are plentiful, with a fair demand. Violets have shortened up and the present outlook is for a shortage for Valentine's day, which causes much demand for them.

THE NURSERY TRADE.

AM. ASSOCIATION OF NURSERYMEN.

R. C. BERCKMANS, Pres.; R. J. COE, Vice-Pres. GEORGE C. SEAGER, Rochester, N. Y., Sec'y.
Twenty-seventh annual convention, Milwaukee, Wis., June, 1902.

THERE seems to be no let-up to the demand for ornamental nursery stock.

IN the west there are likely to be more apple trees than anything else planted this spring.

THE Greening brothers, at Monroe, Mich., have incorporated their nursery business with a capital of $100,000.

SEYMOUR NELSON, of Swain Nelson & Son, Chicago, has drawn the plans for the improvement of Greenwood and Union Parks, at Des Moines, Ia.

NEW YORK has 237 nurseries, California is credited 141 in the U. S census report, and Ohio 147. Illinois has 126, Missouri 116 and Iowa 104. No other state is credited with as many as 100.

News of the Parks.

It is proposed to enlarge River View Park in the old Hudson city section of Jersey City, N. J., and for this purpose to secure authority to issue $100,000 of bonds.

A plan is on foot to add another small park reservation within the city limits of Lynn, Mass., by acquiring a triangular shaped piece of land located in the old section of East Lynn. The cost is estimated at $30,000.

Superintendent Seybold, of the Eastern Park District of Baltimore, has over 65,000 square feet of ground in flower beds, of which there are 316 in all, requiring 51,000 flowering bulbs and 18,500 pansies and daisies for the early spring display.

Harrisburg, Pa., citizens are thoroughly awakened to the neccessity for more public breathing places of convenient access in the city. Reservoir Park is too remote from the center of population to afford the needed relief to the dwellers in the thickly settled districts, whose resources are not equal to frequent trolley or carriage rides.

The Mayor and City Council of Baltimore, Md., through its park commissioners, have purchased Gwynn's Falls in West Baltimore, also additional tracts in the city proper and South Baltimore, for park purposes and playgrounds, and it is expected that congress will permit the acquisition of old Fort McHenry in the harbor for a public recreation ground.

The park commissioners of the City of Worcester, Mass., in their annual report, recommend the acquirement of sundry parcels of land for park extension and playgrounds, the cost to be defrayed from a special park loan. They also advise that in the near future the care and supervision of the shade trees on the public streets be transferred from the park commission to the control of a forestry department.

The legislature of Massachusetts has been asked for an appropriation of $50,000 for the acquirement of further land for the great mountain park at the summit of Greylock mountain in the western part of the state. This giant peak, the highest elevation in Massachusetts, is situated in the towns of Adams, North Adams, Pittsfield and Williamstown, and is heavily timbered. A 40 foot tower has been erected at the summit, from which is visible to the north the Bennington monument in Vermont, also objects in New Hampshire, and to the south portions of Connecticut and New York state.

Baltimore.

SOCIETY LADIES WILL JUDGE CARNATION EXHIBITS.—GOOD THINGS SEEN IN THE PRIVATE GREENHOUSES.—MOSAIC BEDDING IN FAVOR.—VARIOUS NOTES OF INTEREST.

The Gardeners' and Florists' Club will give a carnation show on the fourth Monday of this month, and President Robert Halliday has decided to appoint several society ladies from the list of patronesses to act as judges at the show. The patrons and patronesses will have the hall exclusively to themselves from 2 to 6 p. m. and after 6 p. m. the general public will be admitted. The show will be free and will be held at the Royal Arcanum Hall. Premiums and certificates will be given to the successful exhibitors.

In a trip among the private places, one finds a great deal of interest. Chas. Wagner, gardener to C. R. Diffenderfer, has by all odds the finest carnations I have ever seen on a private place. Mr. Hunecke, gardener to ex-Postmaster General Gary, has a fine lot of roses, carnations and exotics. The fine range of houses at Mrs. T. Harrison Garrett's are in very fine shape, the display of orchids in bloom being striking. Mrs. Garrett has expended several thousands of dollars in landscape work lately. This spring a collection of rare coniferous stock, together with rhododendrons, hardy azaleas, hydrangeas and so forth will be added to the already large collection.

In the Baltimore parks the fine exhibition of gothic mosaic beds and especially the echeveria and alternanthera mosaics at the November exhibition in the Patterson Park casino, seemed to be the center of attraction with the people. The many rare foliage plants and exotics did not seem to interest the people as much and the chrysanthemums are only admired when extraordinarily large sized flowers are shown.

I find that echeverias are coming in favor. They are very scarce in Baltimore and Washington. I would advise our commercial men to grow these plants more generally, as their propagation and cultivation does not require much time and attention.

The retail trade has been fairly good during the past week.

KANSAS CITY, Mo. — F. J. Taggart, Director General of the flower show, has bought out R. H. Williams, grocer, and, applying his well known advertising principles, is having a flour show of his own.

The following letter from Messrs. Robert Craig & Son speaks for itself:

PHILADELPHIA, PA., Jan. 6th, 1902.

S. S. SKIDELSKY. *Dear Sir:*—We are much pleased with the "Mrs. Nelson" Carnation, of which you sent us plants for trial last spring; it has a fine constitution and is an abundant bloomer. The blooms are of good size and the color very desirable. It has good, long, stiff stems. We think it will be a standard variety. Yours truly, ROBERT CRAIG & SON.

PRICES.

Per Dozen, $2 50; 25, $3.50; 50, $6.00; 100, $10; 1000, $80.

250 go at 1,000 rate. Send for descriptive circular.

PLANS are being made for a bowling contest at the carnation meeting.

At Flatbush.

At the bowling alleys on Thursday evening, February 6, the following scores were perpetrated:

E. Dailleouze	157	159	H. Dailledouze	146	138
Riley	156	158	Schmutz	111	145
P. Dailledouze	122	167	Wocker	115	107
C. Zeller	91	125	A. Zeller	144	187
Raynor	108	155	Stewart	85	95

At Denver.

The following is the latest record made on Denver alleys:

Player.	1st	2d	3d	Av
A. E. Mauff	141	163	220	175
N. A. Benson	169	143	206	173
C. Mauff	174	173	145	164
John Berry	176	128	144	149
Robert Kurth	179	126	125	143
J. A. Valentine	108	156	149	138
Chas. Theiss	112	153	131	132
Emil Glauber	90	127	132	116

J. B.

At New York.

The old regulars are getting down to work again, as the appended scores will show, and Asheville looms up only six months away.

Player	1st	2d	3d
Thielmann	169	164	209
Burns	149	156	146

A. S.

At Philadelphia.

For the first time in three years a team representing the Florist's Bowling Club has been defeated in this city. This humiliation was at the hands of the ten-man team of the Century Wheelmen. The match was played on the Tuxedo alleys, at Fortieth and Lancaster avenue. These are one of the finest sets of alleys in the country, having just been completed by the Brunswick-Balke people in their best style and are first-class in every respect. All the new alleys now being built are very fast and the surface is kept constantly polished, so that when one gets used to them the pins fall easier than on a flat surface such as is found on our club alleys. However, we do not want to take any glory from the victors, as they bowled in great form and had to break a record to win. The teams were divided into squads of five men each. The First Century team put up 1067 in the first game, which for five men comes pretty near to being the record for the country. Who has heard of a higher game? It is the record for this city, at any rate, and there was a hilarious time when it was made. The Florists' first team was only able to make 875. This looked like a big lead and as the second squad was also defeated by twenty-eight points it seemed a sure thing for the Centurians. This proved to be the case, for while the Florists rolled a great up hill game, winning the two remaining games, which would have given them the match had it been games instead of total pins, they had to be content with the knowledge that they had taken part in a great game and with the hope of turning the tables the next time they get the chance. Starkey covered himself with glory, having the honor of being high man, with a total of 605. His games were 204, 200 and 201. This is a great ten-pin record, to be made under pressure. The score follows:

FLORISTS.	1st	2d	3d	T'l
Moss	159	206	220	585
Mooney	141	202	131	474

Team total	842	769	878	2488
Century	870	846	805	2515

Last Wednesday was a gala night on the club alleys, there being a handicap tournament open to members of the bowling club. The prize won at the last Academy tournament was turned into a number of smaller trophies, which brought out the devotees in great numbers. There was considerable talk about the handicap, many bowlers thinking they should have had more, but it was found that the committee had done its work fairly. Johnson was at scratch with 174 and all handicaps were based upon this less twenty per cent. Following are the scores:

Player	Score	H'd'p.	T'l.
Craig	198	22	220
Turney	173	30	203
Sweet	176	22	198
Hallowell, W.	175	23	198

AMERICAN FLORIST ADS ALWAYS DO BUSINESS

Week days and every day, Sundays and holidays,

ALL OVER THE COUNTRY AT HOME AND ABROAD.

The Kansas City Flower Show

Of 1901 was the greatest success ever known in Flower Show history. The Kansas City Flower Show was built in less than 60 days, in the face of statements of people posted in flower shows that it would take two years to build it. The Kansas City Flower Show broke every record in every way. It kept every promise, it offered the biggest premiums, it paid every award dollar for dollar, and it paid them all the day the show closed. It had paid admission of over 52,000. It gave every visitor more than his money's worth. It didn't have a protest filed. The exhibitors who were here in 1901 all voluntarily promised to be here in 1902.

THERE'S MONEY IN IT

Go For It!!

Uncle John Thorpe, who was in a greater measure than any other man responsible for the success of the Show last year, will be the Superintendent in 1902. F. J. Taggart, a member of the Board of Directors of Convention Hall, who was Director General last year, will be "D. G." this year. A thousand prominent business men who backed this show with their time, money and influence last year, will push it along this year. The dates of the Flower Show this year will be Nov. 3, 4, 5, 6, 7, 8. The 1902 premiums will be bigger---the show will be bigger and better---the interest deeper. Schedule in a short time.

F. J. TAGGART, Director General.
JOHN THORPE, Superintendent.

THERE'S GLORY IN IT

Grow For It!!

Toronto.

GOOD SHOWING OF CARNATIONS AT BRAMPTON.—MANY VISITORS.—TRADE SHOWS A GAIN.—GOOD STOCK MOVING WELL.—NOTES OF VARYING INTEREST.

At the carnation meeting of the Canadian Horticultural Society, held at the Dale Estate, Brampton, it was demonstrated that this section is surely getting to be a carnation center. The attendance was beyond expectations and the stock shown was a credit to the exhibitors. Many of last season's new varieties were shown with the standard sorts and a few Canadian seedlings. Some of the best varieties were Prosperity, Lorna, Lawson, Marquis, Queen Louise, Roosevelt, Norway, Glacier and Morning Glory. After the growers had commented on the good qualities of their favorite varieties, a visit was paid to the adjoining greenhouses. The sell feeding boilers were inspected and everything was found in excellent condition. After leaving there visits were paid to the Wm. Fendley and R. Jennings establishments and stock was found to be looking exceedingly well. Through the courtesy of the Dale Estate and Wm. Fendley luncheon and tea were served all the visitors at the Brampton Hotel. Visitors were: Jno. H. Dunlop, Walter Muston, Geo. Mills, Wm. Jay, Sr., Jas. Goodier, Toronto; Wm. Gammage, London; Jno. Wells, Galt; Thos. Ivey, Brantford; J. Gilchrist, Guelph; M. Iler, Berlin, and others.

A decided improvement has been noted the past week. American Beauties are a little more plentiful, and although the supply of teas is fair the increased demand keeps them at a premium. Liberty and Morgan are very scarce. Carnations continue in good supply. Dunlop showed a good vase of Prosperity on Saturday, which sold readily at $1.50 per dozen, a high price with us at this season. This variety has been adjudged unprofitable by the growers in this vicinity, large plants and no flowers. Bulbous stock is plentiful and moving well, but greens are very scarce. Orchids have again made their appearance. Cattleya Trianæ, cymbidiums, oncidiums and some other salable varieties are being cut by Manton Brothers.

The coal question is causing considerable anxiety to large growers who did not lay in their winter's supply. Greenhouse coal is not to be had and the price on the better grades is soaring skyward.

Canada is likely to be well represented at Indianapolis, although more would go could stop-over be obtained on the cheap rate. H. G. D.

Champaign, Ill.

The Illinois Central Railroad is building three greenhouses here, each 21x100, for plant growing, the purpose being to beautify the station grounds along the line. The greenhouses will be in charge of J. Porte, chief gardener of the system, and there will be a good sized nursery for hardy plants. The company appropriated $5,000 to start the work and from $50 to $150 will be spent at each station next spring. It is the experience of the company that, on other divisions of the road, as soon as the station grounds were nicely planted the adjacent property owners soon followed suit and trains were soon passing through most attractive surroundings.

NORFOLK, VA.—Among the sufferers by the great fire of January 31, was Lloyd G. Blick, whose store was burned out.

CLUB HOLDS AN INTERESTING SESSION.—ROUTES AND RATES DISCUSSED.—PARTY FOR INDIANAPOLIS.—TRAVELER DISCOURSES ON LILY OF THE VALLEY.—A TRIO OF CRAFTSMEN GO AVISITING.

The regular meeting of the Florists' Club held Monday evening, February 10, was very well attended. The club had as its guests Chas Gibson, general ticket agent for the Lake Shore and Big Four railways, and Jas. McHutchinson, of New York At the request of the club the former gentleman gave information as to the routes and rates for those intending to attend the carnation convention. As the majority wish to take in various points of interest along the route, such as Cincinnati, Richmond and New Castle, it was deemed advisable to recommend the purchase of a milage ticket, as no stop-over is allowed on the regular fare and one-third ticket. The party, which will number, in all probability, about twelve, will leave Cleveland from the Union depot, Sunday evening at 7 p. m., arriving at Cincinnati next morning. Mr. McHutchinson gave a very intesesting talk on lily of the valley culture in this country and in Europe. In Australia, where the gentleman hails from, it is impossible to get valley to flower with any degree of success, owing to the intense heat. Even indoors, where conditions are made as favorable as possible it is found impossible to flower it successfully. Herman Hart and G. W. Smith had each a vase of carnations on exhibition. Hart's was a mixed vase of standard varieties, and Smith showed his pet seedling. Each vase was fine. Fred Aul was present for the first time since his recent illness and received a hearty welcome. Beno Hart leaves the hospital this week after being confined therein for almost nine weeks. He is regaining health and strength steadily, and hopes he will soon be able to attend the meetings.

The writer, accompanied by Herman Hart and Adam Graham, paid a visit recently to Mentor and Painesville to look up the suburban members of the craft. A call was made on Carl Hagenburger, who was absent, doing a decoration in Painesville. A great variety of geraniums and carnations are grown here, principally for the wholesale shipping trade. The new range of modern, iron gutter houses Mr. Hagenburger is going to erect this spring will be devoted to carnations.

John Merkel's place was the next one to receive a call and the genial proprietor was found busy at the potting bench. A look through the houses discloses everything in fine shape. A large batch of Crimson Ramblers were as fine as anything we had ever seen and just about right for Easter. Two houses of Brides and Bridesmaids are showing up well, also a batch of cyclamens, which would be hard to beat, in 6-inch pots. Rubbers and palms galore were to be seen.

Mr. Merkel also grows a great many carnation cuttings for shipping trade. His seedling carnation, No. 16, is looking fine. It is a well shaped pink flower, about the shade of Joost, and measures three to three and one-half inches in diameter. The only drawback is a rather weak stem for such a heavy flower. If this is overcome it will prove a valuable acquisition.

Our next visit was to the nurseries of the Storrs & Harrison Company, but as it would take up too much space to enumerate all the interesting things we saw there, this must be reserved for a future edition. ECHO.

Carnations.

ROOTED CUTTINGS.

CLUB HOLDS A SESSION FOR THE LADIES.—GOOD PARTY FOR CARNATION MEETING.—INVITATION TO BE EXTENTED.—VARIOUS NOTES.

Very little of a business nature was transacted at the club meeting last week. It was "ladies' night" and over twenty of them, and about twenty-five members, braved the cold and met at the club parlors for the entertainment provided for them. After a short business session, Prof. W. W. Tracy gave a little talk on "Harmony and Contrast in the Effective Arrangement of Flowers" which was both instructive and interesting to all present, which was followed with recitations and a musical programme, with refreshments, which was much enjoyed until a late hour.

A party of about fifteen will attend the carnation meeting at Indianapolis, leaving Detroit via the Wabash at 7:40 a. m., Tuesday, February 18, arriving at Indianapolis at 3:30 p. m. the same day. President Rackham will, in the name of the Detroit Florists' Club, extend an invitation to the society to hold its next meeting in this city, and when the voting is going on the Detroit boys will all be on the inside of the hall and thus avert a repetition of the Buffalo incident.

A healthy condition of trade is noted among the retailers. Festivities of various kinds are frequent, which added to the extraordinary amount of funeral work, easily uses up the supply of all available stock. Roses are at times quite scarce and though violets are fine and quite plentiful the demand for them is very brisk and leaves no surplus.

John Carey, of Mt. Clemens, being situated far from Clinton river, is obliged to haul water from that source for his roses, which are showing an improvement since he stopped the use of the injurious city water. James Taylor is about to build a house 20x150 feet for chrysanthemums, using double strength glass 16x16.

J. A. Briscoe is about to remove his Wildemere Gardens Nursery stock from its present location on the boulevard to Woodward avenue, just outside the city limits, where an increased acreage will be devoted to his rapidly growing business.

Chas. A. Kaichen, of the Lake View Floral Co., was married last week.

Visitors: Henry Smith and Eli Cross, Grand Rapids; S. S. Skidelsky, Philadelphia; C. W. Scott, Chicago. J. F. S.

LAFAYETTE, IND.—Herman Roth is making preparations for extensive improvements in his range of glass on North Grant street this spring.

NEWPORT, R. I.—Mr. Chadborn, inventor of the automatic ventilator, and Robert Farquhar, of Boston, were in town this week. Mr. Farquhar's illustrated lectures given here in the past are highly thought of and an effort is now being made by the Horticultural Society to have him come here to deliver his lecture on Japan and Hawaii.

30 000 YOUNG ROSES in 2x2½, 2¼x3-in. and 3-in. pots. Also Rooted Cuttings. Roses—Meteors, Brides, Maids, Kaiserins, Perles, Am. Beauties, Liberty, Golden Gate, La France, Belle Siebrecht. We believe in shifting Young Roses. All stock offered in 2½-in. pots has been shifted from 2-in. and is equal to most stock advertised as 3-in. and when we send it out is well established. The above are now ready to go out and—as we need room—we will make special prices in quantity. Send us a list of what you want and we will give you our figures. Send $1.00 for samples. Write

The Sensational New Rose for 1902.

MRS. OLIVER AMES.

For description, prices, etc., see my new Wholesale Trade List now ready which can be had on application.

What the leading Retail Florists of the different cities say of this Rose:

Messrs. J. H. Small & Sons, Washington, D. C., under date of Dec. 2, 1901, write:

DEAR MR. MAY:—We beg to acknowledge the receipt of the box of Mrs. Oliver Ames Roses which arrived on Wednesday, Nov. 27th. They were in perfect condition when we received them and we have kept two or three of them until to-day, which proves that their quality as a keeper is unsurpassed by anything we have handled

We exhibited the roses to our customers and they were very much admired. We have no doubt from what we have seen of this Rose that it has a great future in store.

Again thanking you for your courtesy in sending them, we remain.

Yours very truly, (Signed) J. H. SMALL, JR.

JOHN N. MAY, Summit, N. J.

IVORY or WHITE Golden Gate.

The easiest, freest bloomer and most profitable white rose to grow. 20,000 plants out of 2-inch pots. February, March and April delivery.

$6.00 PER 100; $27.50 PER 500; $50.00 PER 1000.

Elmira, N. Y.

HOFFMAN CONFINES EFFORTS TO WHOLESALE TRADE. — PRODUCERS OF GOOD STOCK.—GARDENER HAS SEEDLING OF EXCEPTIONAL MERIT.

One need not go beyond the limits of Elmira in quest of first-class stock. As good as is grown anywhere, one can find right here. At Grove P. Rawson's both roses and carnations show up splendidly. It would be needless to add that Lizzie McGown, Portia and the like have outlived their usefulness here and that the best varieties extant have long since replaced these old time favorites. His general stock is likewise in the pink of condition.

H. N. Hoffman has disposed of his retail business to Mr. Leavitt and is now giving his entire attention to his wholesale trade. Having added two more carnation houses, each 23x100, to his already extensive plant, Mr. Hoffman is well equipped. Lawson, as everywhere else, is the favorite here, although Marquis, Genevive Lord and, would you believe it, the much maligned Ethel Crocker, do equally well on his place. Nor has be discarded the old Scott. It still holds its own here and is worthy of its place. Queen Louise, Norway and White Cloud are grown for white, and it would be hard to determine which does best. At the time I saw them each showed up to good advantage. Mr. Hoffman also grows a miscellaneous stock and his extensive nursery forms an important branch of his business.

John Rudy, gardener for Senator Fassett, had several surprises in store for the writer. In the first place he showed me some Ethel Crocker, the like of which I never saw on any place, veritable giants and perfect blooms. How he manages to grow it to perfection, while many seem to fail with it, is certainly inexplicable. A second surprise, and one which bids fair to surpise the carnation men at some future day, is a seedling of his, a magnificent scarlet, borne on a long, stiff stem, the bloom measuring three and one-half inches and of the finest, brilliant color imaginable. He has about a dozen plants, this being its second year. A glance at his general stock sufficed to convince me that Mr. Rudy is a grower the like of whom one seldom finds among private gardeners.

F. L. La France has things in fine condition. His carnations, of which he makes a specialty, look very fine indeed and come in paying quantities.

Mr. Leavitt, successor at H. N. Hoffman's retail store, reports a good business all along the line. NOMIS.

Warren, O.

George Richardson has a new nymphæa which he has named Mark Hanna which he will introduce to the trade next season. The color is a deep pink, shaded red, and the flowers are very large. Mr. Richardson says it is the best bloomer he has in his twenty-four ponds, covering about three acres. Mr. Richardson is the originator of a number of new popular varieties of nymphæas. His address has been Lordstown, O., but the Lordstown postoffice has been discontinued since rural free delivery was inaugurated from Warren.

BATAVIA, N. Y.—Paul Liebsch has a new carnation, yellow marked with scarlet, for which he is reported to have refused $500 when he had only fifteen plants. His stock is now worked up to 3,000 plants.

American Florist Co.,
CHICAGO.

Syracuse, N. Y.

SEVERE WEATHER INTERFERES WITH THE PLANT TRADE.—CUT FLOWERS MOVING FAIRLY WELL.—BULBOUS STOCK.—VARIOUS NOTES.

During the week just past, Syracuse has been in the grasp of the worst blizzard she has experienced in years. The cut flower trade has kept up well in spite of this, but the plant trade has fallen off. A scarciety of stock has been felt by some of the florists, due to the weather. Tulips, daffodils and lilies of the valley have a good market, and Easter lilies are just beginning to come in. Daffodils are popular for center pieces and bring $1 per dozen. American Beauties bring $5 to $15 and carnations 75 cents to $1.50 per dozen at retail.

The outlook is excellent in the seed business, the farmers having received good prices for their products last year. They are consequently preparing to buy seeds of all kinds. The heaviest trade will be on onion and alfalfa seeds, these crops having been particularly successful.

P. R. Quinlan & Company have had a unique display of primroses in their window, using about 300. W. S. Wheadon, of Quinlan's, did the decorating at the Alhambra for the Commandery ball, Knights Templar, Monday night. Palms were mostly used.

David Campbell, formerly gardener for Maj. Alexander Davis, has entered upon his duties as superintendent of parks of Syracuse, and has several plans for the ornamentation and improvement of the public beauty spots as soon as the snow is off.

Henry Burt, in addition to his florist trade, is an extensive market gardener, and is preparing for a large business this season. A. J. B.

Peoria, Ill.

Henry Baer, who was for a number of years in the employ of J. C. Murray, is preparing to go into business as a carnation grower for the wholesale market. He has placed an order with A. Dietsch & Company, Chicago, for four 200 foot sections of their patented short-roof construction and as soon as the building season opens he will begin the erection of what is to be a thoroughly modern plant. The boiler house will be entirely apart from the greenhouses and only connected with them by a glass passageway.

EAST GREENWICH, R. I.—On the morning of February 3, the residence and three of the five greenhouses of Wm M. Crompton were destroyed by fire, the loss being estimated at $6,000. The fire is thought to have originated from the heating apparatus of the greenhouse.

Orchids!

Our stock of Orchids is the finest that can be produced—no need of crossing the "pond" to get them. We have also fine fibrous Peat, live Sphagnum and round and square Orchid Baskets in all sizes.

LAGER & HURRELL, SUMMIT, N. J.

San Francisco.

RAINS BRING PROMISE OF LARGER SUPPLIES AND MUCH BETTER BUSINESS.—CHEAP GLASS ENCOURAGES BUILDING.—SHOW ASSURED.

The long continued drought is at last broken and the much wanted rains have set in for good, making the prospects for business very bright. Not that there are any complaints of poor business; on the contrary it is as good as could be wished, but stock is exceedingly scarce, which shows that with continued cold weather there is room for many more greenhouses Since glass has made a big drop here lately, there will be plenty of growers to take advantage of it. Prices for cut-flowers are still the same as at previous reports. Bulbous stock is now plentiful and good prices are realized. Tulips bring up to 50 cents per dozen and narcissi 50 cents per hundred. Adiantum cuneatum is still very scarce and wild maidenhair takes its place.

The committees of our two horticultural societies have held a meeting and reached an agreement as to a combined flower show to be held in the beginning of May. The exhibition will be held in the Ferry building and will be the largest and best ever held on the coast. A long list of prizes has been made up and will be published as soon as complete.

GOLDEN GATE.

LONDON, ONT.—Mrs. F. Dicks, wife of the well known florist at Askin, is dead.

BROCKTON, MASS.—A proposition to purchase the property known as the Goddard lot, comprising eight acres, for a public park is receiving enthusiastic public support. The land is situated in the heart of the residential section of the city.

YOUNGSTOWN, O.—E. Hippard reports an unusual demand for catalogues and quotations. He has already booked orders for 5,000 feet of his duplex iron gutters, to be delivered in April and May. The ventilator business this year is expected to beat all records.

Washington.

ELABORATE DECORATION FOR A WEDDING. —COLD MAKES PLANT MOVING DIFFICULT.

Trade has been very good, notwithstanding the continued cold weather, which has added to the difficulty of handling large plants for decorations at receptions and weddings. J. H. Small & Sons had the Hay-Whitney wedding decorations, which were the grandest and most elaborate ever seen in Washington. The house was handsomely dressed with palms, large white lilacs and a number of large vases of extra fine Bride roses. The Church of the Covenant, where the ceremony took place, was decorated with large palms, southern smilax and about 7,000 Harrisii and longiflorum lilies. The bride carried an English shower-bouquet of white orchids and roses.

George E. Smith, whose greenhouses are out on the Bowen road, died January 28, of pneumonia. He was 43 years of age. P. G.

Springfield, Mass.

TRADE BRISK, STOCK PLENTIFUL, BUT LITTLE GOING TO WASTE—VARIOUS ITEMS.

There has been a good demand the past two weeks for stock of all kinds, roses, carnations and violets being the leaders, bulbous stock moving slowly, except LaReine tulips, which can be used for most any work. February 7 the Charity Ball created a brisk demand for violets, which were plentiful but none going to waste. Lilacs, spiræa, rhododendrons and lilies look promising for Easter. The latter, I am sorry to say, are badly diseased again this year and quite a number are being thrown out.

Fairfield is showing some fine cyclamens, adiantums and palms in his State street store.

Schlatter & Son say business is good in plants, of which they have a good stock at their greenhouses.

L. D. Robinson reports business good and stock coming along nicely for Easter. A. B.

GRAND RAPIDS, MICH.—The Grand Rapids Violet Company has done so well on Beauties this year that violets will be largely replaced by this flower next season.

GREENS FARMS, CONN.—Geo. Whitehead is busily engaged in rebuilding the greenhouses recently destroyed by fire and hopes to have everything in complete running order again soon.

HURON, O.—J. P. Esch is temporarily out of business, his greenhouses having been destroyed by fire on January 12. He is spending the winter in Florida but will come home to rebuild as soon as spring opens.

AMERICAN CARNATION SOCIETY.

ELEVENTH ANNUAL MEETING, INDIANAPOLIS, IND., FEB. 19 and 20, 1902.

The eleventh annual meeting of the American Carnation Society, held at Indianapolis, February 19 and 20, must be recorded as by far the most successful in the history of the organization. The Society of Indiana Florists, under the auspices of which the meeting was held, made excellent preparations for it. The German House proved to be an ideal place for the exhibition and meetings.

PRESIDENT-ELECT C. W. WARD.

It is true, perhaps, that had all the carnations sent to Indianapolis for exhibition and competition been staged, the hall would have been pretty well crowded, but those exhibitors whose stock arrived late placed only a few of their carnations on the tables.

It was again most unfortunate that the exhibits of some of the leading growers were detained on the way, owing to storms and other causes. Among those thus delayed were Peter Fisher, of Ellis, Mass.; Wm. Nicholson, Framingham, Mass.; Chicago Carnation Company, Joliet, Ill., and during the meeting a message was received from John N. May, Summit, N. J., to the effect that his exhibits could not be shipped on account of the storm. It is probable that many others from the east would have attended but for the storm which raged early in the week. We failed to notice a single representative from Philadelphia, no doubt due to this cause. The Boston delegation was held up at Cleveland for sixteen hours and that from Buffalo did not arrive until late in the afternoon of the opening day.

With the exception of these drawbacks, however, the meeting was the most successful of the kind ever held. The exhibits generally were of higher quality than heretofore and the unusually large and representative attendance of persons in the trade afforded ample evidence of the deep interest which is taken in the affairs of this society. The exhibition hall was handsomely decorated and well arranged for the convenience of exhibitors and the public. The wild smilax used in decorative work was generously donated for the occasion by Caldwell, the Woodsman Company, of Evergreen, Ala. Promptly at 1 o'clock on the opening day the entries were closed and soon after the judges were at work on the various classes. In the evening the hall was open to the general public, but though no admission fee was asked, those outside the trade who wished to see the display had to present one of the admission tickets which were freely distributed by the members of the local society. The hall was filled by such visitors in the evening, also on the following day.

It was understood that the largest shipment of flowers made for the occasion was that of Bassett & Washburn, of Chicago, but although this firm was a heavy prize-winner, the greater part of the shipment was donated to the flower booth for the benefit of the local society. The greatest interest, perhaps, centered in the award of the Lawson gold medal, for the best 100 blooms of any variety, and the S. A. F. silver and bronze medals, for the best unintroduced seedlings. The Lawson medal and the S. A. F. silver medal were awarded to the E. G. Hill Company, of Richmond, Ind., for Adonis, and the S. A. F. bronze medal awarded to

Richard Witterstaetter, for his seedling No. 723. It should be stated here that the E. G. Hill Company generously requested the permission of the society to transfer the Lawson medal to Richard Witterstaetter, of Cincinnati, O., the originator of Adonis, and this action was heartily endorsed. A full list of the awards will be found elsewhere in this issue.

In the absence of President Wm. G. Bertermann, unhappily due to ill-health, Vice-President Fred H. Lemon called the meeting to order for the opening session, February 19, at 11:15 a. m. The principal business of this meeting was the selection of judges, which resulted as follows: On certificates—C. W. Ward, Queens, N. Y; Adam Graham, Cleveland, O.; Emil Buettner, Chicago, Ills. On classes A, B and C—Eugene Dailledouze, Flatbush, N. Y.; Paul M. Pierson, Scarborough, N. Y.; W. N. Rudd, Mt. Greenwood, Ill. On special premiums—Ernst Asmus, West Hoboken, N. J.; Fred Burki, Bellevue, Pa; A. Herrington, Madison, N. J. There was some discussion with reference to placing in competition shipments of stock which arrived late, but the society decided to adhere to the rules and close the entries at 1 o'clock.

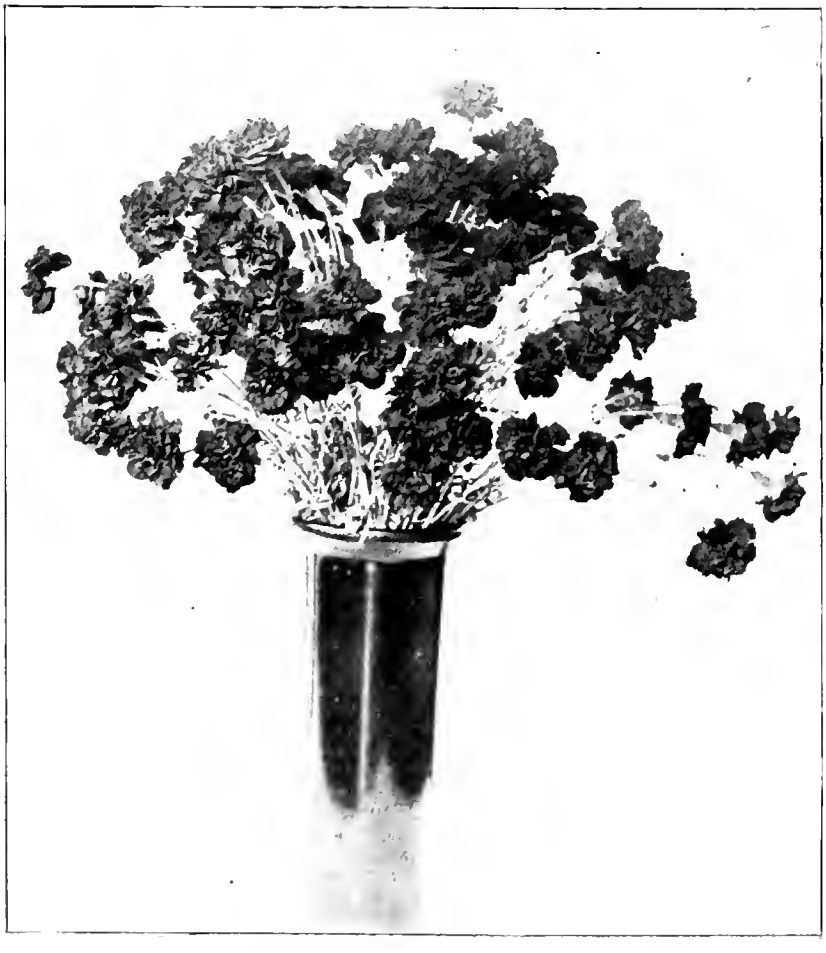
At the afternoon session, called to order at 2:15 o'clock, Mayor Bookwalter cordially welcomed the visitors and humorously presented them with the freedom of the city. Mrs. Vesey, of Fort Wayne, spoke for Indiana, and C. W. Ward responded in suitable terms. Vice-President Lemon then read the address of President Bertermann, and after a few remarks, J. S. Stuart and Lewis Ullrich were appointed to forward a suitable reply. The reports of the secretary and treasurer followed and were adopted. There was some discussion in regard to retaining the society's badge, but it was ultimately decided to continue it. E. G. Gillett's paper, "Criticism of Growers' Methods," was next read and the discussion of same deferred. The report of the committee on incorporation was then presented, but the vote on the matter was postponed until the following day.

At the evening session there was some discussion of Mr. Gillett's paper and that on "Sterilized Soil for Stem-rot" was read by Wallace R. Pierson. In reply to queries brought out by this paper, it was stated that there was a marked difference in the flowers produced on sterilized and unsterilized soil, in favor of the former, that sterilizing would deprive the soil of all bacteria and red spider and that the cost of sterilizing soil for a house 16x300 feet would be about $25. The report of the judges was adopted as read. The next business was the nomination of officers and place of meeting for next year. Brooklyn was nominated for the place of meeting, the Detroit representatives, who had been making some effort to secure it for their city, withdrawing in favor of the former. C. W. Ward, Queens, N. Y., was nominated for president; Henry Dailledouze, Flatbush, N. Y., vice-president; Albert M. Herr, Lancaster, Pa., secretary; Fred. Dorner, Jr., Lafayette, Ind., treasurer.

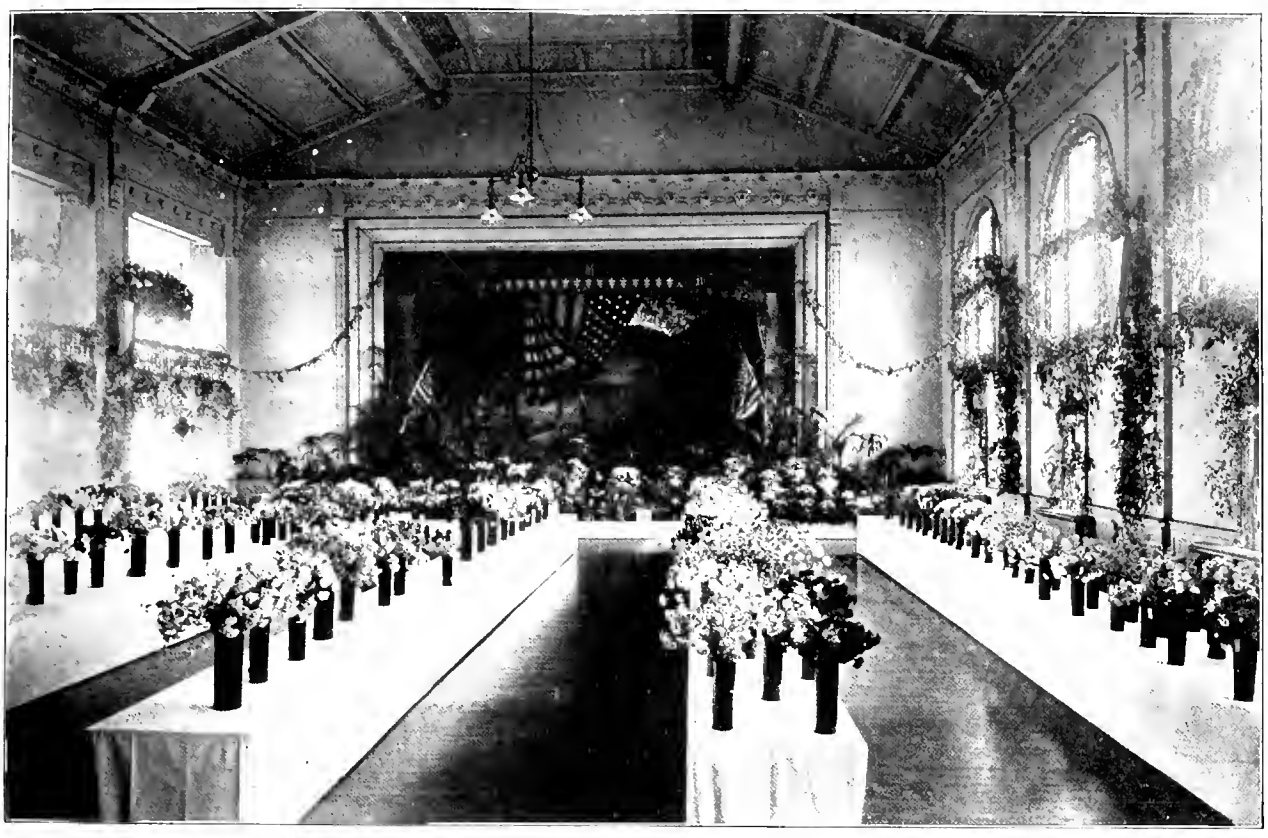
The morning session of February 20 proved to be the concluding one of the meeting. Brooklyn was chosen as the place of meeting next year and the officers nominated the previous day elected. The judges, in their report, made certain recommendations, which were concurred in by the society and referred to the executive committee for action. Wm. Scott, Wm. Nicholson and Wm. K. Partridge were appointed to prepare a premium list for next year. C. W. Ward lead the discussion on sub-watering in a humorous manner. He expressed his willingness to answer any questions on the subject, and in reply to one member, said that sub-watering would be profitable to the ordinary grower if the man had capital enough and brains enough to run it. Replying to another query, he gave the cost of sub-watering at from $1 50 to $3 per running foot, according to the brains and experience used in building the benches, adding that it required all the brains that could be got into one cranium. It was his opinion that a great advantage was gained from sub-watering and he briefly described the plans and material used in the construction of his benches, which are familiar to our readers, generally. Under the same conditions sub-watering proved to be one-third better in quantity and one-fourth better in quality than surface watering and the stems obtained under sub-watering are from four to six inches longer. One of his experiments consisted of taking a group of the poorest plants and a group of the best, in which the poorest, under the sub-watering system, soon excelled the best treated by surface watering. He claimed that the bricks used in sub-watering were beneficial to the extent that they held the heat and moisture longer than any wooden trough and that by this method the soil does not become so hard as in surface watering. He concluded by stating that his experiments in this line had extended over a period of three years, and that while he was not yet able to give out anything definite with regard to the success of sub-watering, he was well pleased with the results thus far achieved.

The discussion here turned on the artificial fertilizers used by Mr. Ward. In this connection he stated that he had used phosphoric acid, nitrate of soda and potash in the ratio of ten, twenty and thirty, dissolved in water, one-half to one ounce to the gallon. This solution was used in the benches about once a week He also stated that he had used these ingredients in different proportions with nearly the same results, but stated that his experiments in this direction had been interrupted by being called from his place of business and that he did not care to leave the work in the hands of someone else. Replying to a question with regard to the value of manure as compared with artificial fertilizers, he stated that there was practically no difference. In some localities, however, he thought it would be advantageous to use the manure for the reason that it can be purchased cheaper.

The subject of incorporation was again taken up and it was resolved to at once file articles of incorporation under the laws of the state of New York. In order to do this, it was necessary to increase the executive committee to nine, by adding the officers and two new names. The two new names added to the list were those of Judge Vesey and Eugene Dailledouze. It was further resolved that the articles of incorporation and by-laws be printed and a copy forwarded to each member of the society at least thirty days before the next annual meeting.



HILL'S VASE OF CARNATION ADONIS.
(Awarded the Lawson Gold Medal.)



GENERAL VIEW OF THE EXHIBITION HALL, CARNATION CONVENTION, INDIANAPOLIS, FEBRUARY 19 AND 20, 1902.

J. S. Stuart brought up the question of adopting the carnation as the national floral emblem of the United States of America. The society voted for its adoption and a committee, consisting of J. S. Stuart, E. G. Gillett and E. G. Hill was appointed to promote its claims. The meeting then adjourned.

The banquet tendered the visitors by the Society of Indiana Florists at the Grand Hotel on the evening of February 20 was a very elaborate and tasteful affair. Considerably over 200 persons participated and there were many ladies present. When the coffee had been served, Toastmaster Hill called upon J. A. E. Haugh, who responded to the toast, "The Indiana Florists;" William Scott spoke for "The Society of American Florists"; Fred H. Lemon, "The American Carnation Society;" J. A. Valentine had "A Message from the Rockies"; C. W. Ward, "Fellowship of Florists;" L. E. Marquisee, "The Carnation of the Future"; A. Herrington, "The Chrysanthemum"; John Thorpe, "Kansas City Flower Show"; E. G. Gillett, "Indiana"; J. D. Carmody, "As Usual." E. G. Hill spoke with much feeling on the absence of President Bertermann, stating that he had supervised most of the arrangements for the entire meeting, but was at the last moment compelled to seek a more genial climate on account of his poor health. The festivities continued until about 2 a. m. It was unfortunate that many had to leave on the early trains, and thus missed a rich feast of eloquence.

Convention Notes.

The Philadelphia contingent was represented only by John Walker, now at at Youngstown, O., who has really been away from Philadelphia nearly two years. The boys were greatly missed.

A number of the western delegates remained over Friday and Saturday, and visited the big growers at various Indiana points.

The Old Guard made but a wavering line, with Craig, May, Lonsdale, Burton, Kitt and Stewart absent.

As usual, there was considerable interchange of good ideas after and between the society meetings.

The excellent bowling alleys at the German House were much appreciated by the visitors.

Fritz Bahr and Anton Then made fun enough for all the crowd all the time.

Judge Vesey has a quiet way of doing things that is very effective.

The Hoosiers have cut out a stiff pace for the Brooklynites.

The chrysanthemum society is looking up.

We'll come again, "Injeanny," soon.

President's Address.

President Wm. G. Bertermann was unable to be present, being in New Mexico for his health, but he prepared an address to the society, which was read by Vice-President Fred. H. Lemon. It was as follows:

Again we are assembled, this being the eleventh annual meeting of this progressive society. As there is much business of importance before us to be taken care of, your president will confine himself to a few thoughts as they have occurred to him.

The Indiana boys are happy to have you all with them in the great carnation belt, in the region where the best blood of the carnation of to-day originated. When you met with us some years ago, a start had been made; but that meeting helped to make our growers further progressive in the line of new seedlings and new varieties worthy of trial by anyone. Since then carnations have grown right along in quality, and it is wonderful how the public has gradually taken up the demand for strictly fine flowers. However, carnation flowers of all kinds, depending on the location, are in favor with everybody. While at times the immense glut on the principal markets is somewhat discouraging, however, these times are of short duration; and a remedy—who will find it?

Speaking of strictly first-class, fine flowers, they are with us, but is it not a mistake to also bring up the prices to a fabulous sum during favorable times? While the retailer wants the best, and is willing to pay a top price, however, there should be a limit.

This society and florists' clubs all over the country have done much to popularize the divine flower in holding free exhibitions, special exhibitions, and so forth, and much more can be done in that direction. A noticeable fact and one of satisfaction, were the select and splendid displays of carnation blooms at several of the fall exhibitions. Was it the favorable weather during previous months, or are carnation plants taking a firmer hold than formerly?

Right here let us consider varieties doing well in one section of the country while in another they are nearly a failure. Could a division be made, trials fixed at different points?

There is much growing demand for summer carnation flowers. Some growers should satisfy the demands of retailers in this respect. Some experiments with incandescent lights for growing carnations at night have been made successfully, but would it justify the means to grow under artificial lights in times of scarcity of cut blooms?

The Society of Indiana Florists, during last fall's great chrysanthemum show and floral festival, adopted resolutions recommending that the carnation be

adopted by this society as the national flower. A grand speech given by the Hon. John L. Griffith, of Indianapolis, during one evening of the exhibition, showed the public to be in full sympathy with the movement. There is very much in favor of such a move; everything is in favor of our divine flower being placed on the national pedestal. A free discussion is desired, and everyone should be prepared to say something when the time comes.

While you are deliberating over the many interests of our sturdy young society, do not forget the sociabilities. Many are against too much sociability, but your president, for one, would like to see everyone enjoy himself on his short vacation from home. The boys of Indiana will give you both work and play.

Secretary's Report.

Your secretary reports having issued the proceedings in due time, the preliminary premium list in July, the regular premium list in January and several circulars during the year, all of which have been mailed to every paid up member of the society, no one ever being omitted.

The question of the permanent fund involves considerable begging on the part of the secretary and is something of a nuisance. If we could decide on a certain amount, raise it, and be done with it, outside of the life membership money, it would be better all around. The interest from this money should be placed in the working fund of the society, as our expenses are increasing every year and the annual dues of $2 from some 200 members do not reach far in paying a stenographer, the printing of the reports, the expenses of the exhibition and one hundred and one little items. We have been helped out considerably by the advertising in the premium list and the members should patronize these advertisers whenever possible.

Our badges and recognition cards, as now conducted, are an annual expense of some $30. The society should take into consideration the benefits derived and decide if we shall continue as we have started.

The labels are rather crude affairs, being the result of some of your secretary's economizing. We should have a neat, uniform label, easily attached, and furnish them to intending exhibitors in such numbers as they may need and let the exhibitor have the names printed or type-written on.

If entries were made in good time this could easily be attended to by your secretary, but at this date, February 13, there are three entries in the hands of your secretary and only one of these gives the names wanted for labels, the others do not. February 15 is given in the premium list as the latest day for entries to reach the secretary. The same notice was inserted in the circular sent with your badge and in each of the trade papers so that there is no excuse for piling up all the work on your secretary for the last two days before the meeting and expecting to have it properly attended to.

All entries received on February 16 and 17 that do not show by the postmark on the envelope that they were mailed in time to reach me February 15 will be charged $1 for each entry, according to rules and if the society thinks this too stringent they can rescind this rule and reimburse those who have paid.

Interest in the society is steadily on the increase and our membership is growing in a good, healthy manner, so that we can congratulate ourselves on the standing of our society to-day.

Treasurer's Report.

FRED. DORNER, JR., Treas.

Report of the Judges.

The awards made at the meeting were as follows:

CLASS A—ONE HUNDRED BLOOMS.

White—H. Weber & Sons, Oakland, Md., second, with Norway; first withheld.

Light pink—R. Witterstaetter, Cincinnati, O., first, with Enquirer; E. G. Hill Company, Richmond, Ind.; second, with Cressbrook.

Dark pink—Bassett & Washburn, Chicago, Ill., first, with Mrs. Lawson; second, H. W. Buckbee, Rockford, Ill., with same variety.

Scarlet — Bassett & Washburn, first, with Chicago (Red Bradt); second, J. A. Peterson, Cincinnati, O., with Estelle.

Crimson—E. G. Hill Company, first with Gov. Roosevelt; second, Bassett & Washburn, with Gen. Maceo.

White, variegated—E. G. Hill Company, first, with Gaiety; second, Bassett & Washburn, with Mrs. Bradt.

Yellow, variegated—Bassett & Washburn first, with Gold Nugget.

Any other color—Bassett & Washburn, first, with Prosperity.

CLASS B—FIFTY BLOOMS.

White—E. G. Hill Company, second, with Flora Hill; first withheld.

Light Pink—E. T. Grave, Richmond, Ind., first, with The Marquis.

Dark pink—Stuart & Haugh, Anderson, Ind., first, with Mrs. Lawson; E. G. Hill Company, second, same variety.

Scarlet—R. Witterstaetter, first, with Estelle; E. G. Hill Company, second, with same variety.

Crimson—No good entry.

White, variegated—E. G. Hill Company, first, with Mrs Bradt; Wm. K. Partridge, Lockland, O., second, same variety.

Yellow, variegated—No exhibit.

Any other color—No good entry.

CARNATION ALBA.

E. GURNEY HILL.

WALLACE R. PIERSON.

E. G. GILLETT.

THREE OF THE PROMINENT FIGURES AT THE INDIANAPOLIS CARNATION MEETING.

CLASS C—TWENTY-FIVE BLOOMS.

White—E. G. Hill Company, second, with Lorna; first prize withheld.

Light pink—No exhibit.

Dark pink—Stuart & Haugh, first, with Mrs. Lawson, no second.

Scarlet—No entry.

Crimson—E. G. Hill Company, first, with Gov. Roosevelt; no second.

White variegated—N. A. Benson, Petersburg, Col., first, with Prosperity; no second.

Yellow variegated—E. G. Hill Company, first, with Golden Beauty; no second.

Any other color—Bassett & Washburn, second, with Prosperity; no first.

SPECIAL PREMIUMS—CLASS D.

E. T. Grave prize, $15, for best fifty blooms of Dorothy—E. G. Hill Company; second prize, $10, not awarded.

E. G. Hill Company prize, $15, for best fifty blooms of Ethel Crocker—Wm. K. Partridge; second prize, $10, not awarded.

CLASS E.

Wm. A. Procter's silver vase, value $100, for best separate collection of commercial varieties, Wm. K. Partridge.

J. M. McCullough's Sons' silver vase, value $25, for the best twenty vases of commericial varieties, Wm. K. Partridge.

Garrett premiums, for the best fifty blooms of any variety not in commerce—E. G. Hill Company, first ($30), with Adonis; E. T. Grave, second ($20), with Camelliæflora.

Lawson gold medal, for best 100 blooms, any variety—E. G. Hill Company, with Adonis.

S. A. F. silver and bronze medals for seedlings not yet introduced—E. G. Hill Company, first, with Adonis; R. Witterstaetter, second, with No. 723.

CERTIFICATES.

Note—Any variety entered for certificate of merit or preliminary certificate must score 85 points to secure either award.

Preliminary certificate—Geo. W. Smith, Cleveland, O., No. 11-98, score 78 points.

Certificate of merit—John B. Goetz, Saginaw, Mich., Oriole, 74 points.

Daybreak Perfection, Boehringer Bros., Bay City, Mich., 74 points.

Louise Naumann, G. M. Naumann, Cleveland, O., 60 points.

Empire State, L. E. Marquisee, Syracuse, N. Y., 87 points.

Mrs. Potter Palmer, Chicago Carnation Company, Joliet, Ill., 85 points.

Mrs. H. N. Higinbotham, Chicago Carnation Company, 86 points.

No. 101 (white seedling), Chicago Carnation Company, 85 points.

MISCELLANEOUS EXHIBITS.

Highly commended: Fine exhibit of new carnations in great variety, from F. Dorner & Sons Co., La Fayette, Ind.; artistically arranged exhibits of well-grown flowers and plants from Bertermann Bros., A. Wiegand & Son, and H. W. Rieman, all of Indianapolis; well-grown Dutch hyacinths from E. Huckriede & Son, Indianapolis; florists' boxes from J. W. Sefton Mfg. Co., Anderson, Ind.

Honorable mention: Elma, Ethel Crocker and seedling carnations from Baur & Smith, Indianapolis; roses and Mrs. E. A. Nelson carnations, from E. A. Nelson, Indianapolis; Mrs. Lawson carnations from W. J. & M. S. Vesey, Ft. Wayne, Ind.; Ethel Crocker, Jubilee and large collection of good seedling carnations from J. Hartje, Indianapolis; large display of florists' supplies, fancy boxes, ribbons, etc., from E. H. Hunt, Chicago; wire plant stands from the Excelsior Wire Works, Indianapolis.

Other exhibitors of miscellanies included D. B. Long, Buffalo, N. Y., shipping labels, florists' souvenirs, etc; Anders Rasmussen, New Albany, Ind., greenhouse ventilator; E. Hippard, Youngstown, O., greenhouse gutter; G. M. Garland, Des Plaines, Ills., greenhouse gutter; Wm. Sim, Cliftondale, Mass., fine Princess of Wales violets; L. H. Foster, Dorchester, Mass., fronds of his variety of the Boston fern; John G. Heinl & Co., Terre Haute, Ind., white lilacs.

RECOMMENDATIONS.

1. That there should be a superintendent of exhibition.

2. That all exhibits should be staged by classes, as such arrangement greatly facilitates the work of the judges and renders error or omission less likely to occur.

3. That regular exhibition cards should be used, same to be enclosed in envelopes.

Those Present.

The following are the names of those who registered at the carnation meeting: the list does not include all those present:

Geo. S. Bartlett, Fred. Gear, Frank Huntsman, Frank Deller, R. Witterstaetter, H. W. Whittier, E. G. Gillett, J. A. Peterson and family, Ben. George, A. F. Hoffmeister, Albert Sunderbruch, J. B. Allan, F. W. Ball, W. H. Procter, Thos. Shipley, Wm. Murphy, Sam. Kuhn and J. W. Rogers, Cincinnati; G. M. Naumann, Geo. Smith, Isaac Kennedy, F. R. Williams, H. A. Hart, Adam Graham, S. N. Pentecost and Gurney Bate, Cleveland; John Merkel, Mentor, O.; Philip Hagenburger and Carl Hagenburger, West Mentor; J. R. Goldman, Middletown; R. Sinclair and S. F. Stephens, Columbus; H. Reeser, John Good and C. L. Reese and wife, Springfield; H. P. Smith, Piqua; Lewis Ullrich, Tiffin; Geo. W. Loeber and W. K. Partridge, Lockland; Wm. Jackson, Glendale; J. D. Imlay, Zanesville; E. Hippard and John Walker, Youngstown; Leroy Lamborn, Alliance; W. G. Matthews, J. B. Heiss, Philip Haas and H. M. Altick, Dayton.

E. C. Amling, J. C. Vaughan, C. L. Washburn, Wm. Trillow, Chas. Schweigert, P. J. Hauswirth and wife, A. M. Hills, Edgar Sanders, L. Coatsworth, John Thorpe, F. F. Benthey, Emil Buettner, E. A. Kanst, J. S. Wilson, C. A. Samuelson, W. L. Palinsky, M. Barker, H. Wietor, G. H. Pieser, W. N. Rudd, Anton Then, W. L. Kroeschell, A. L. Vaughan, H. T. Harman, Andrew Benson, Adam Zender, Chicago; Geo. Weiland, Evanston, Ill.; Swan Peterson, Gibson City; C. W. Johnson, Rockford; W. G. Earle, Park Ridge; Geo. A. Washburn, Bloomington; Geo. M. Garland, DesPlaines; A. C. Brown, Springfield; Fritz. Bahr, Highland Park; Etta J. Nott, Charleston; Harry Heinl, Jacksonville; Jas. Hartshorne, Frank Fischer, J. D. Thompson and Geo. M. Cobb, Jollet; Geo. A. Kuhl, Pekin; John Willus, Danville.

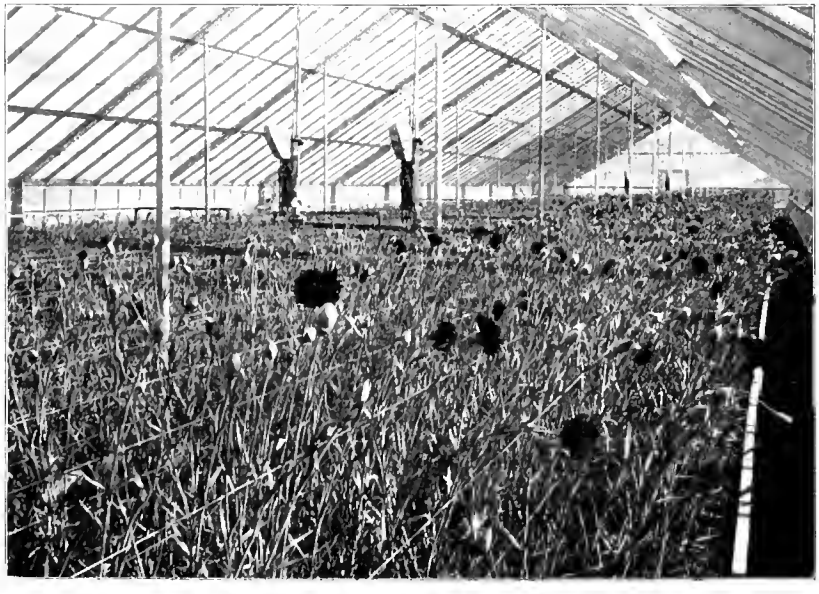
Fred. Lemon, Chas. Knopf, Vernon Grave, B. H. Schroeder, H. Chessman, J.

A. Evans, E. A. Fulle, J. H. Fulle and H. W. Sheppard, Richmond, Ind.; J. D. Carmody, Evansville; Dillon Myers, Bluffton; W. W. Coles, Kokomo; M. A. Barick, Seymour; W. H. Woerner, Elwood; C. C. Harold, Noblesville; Mrs. S. M. Byers and Mrs. W. W. Ackens, Franklin; F. E. Dorner and wife and F. Dorner, Sr., Lafayette; W. J. and M. S. Vesey, Fort Wayne; Myer Heller, L. A. Jennings and P. Weiland, New Castle; Albert Rott, Bloomington; A. C. Anderson, Tipton; E. C. Bissell, Marion; S. Humfeld and M. Carnes, Muncie; A. Rasmussen, New Albany; J. S. Stuart and J. A. E. Haugh, Anderson; W. F. Shaw, Shelbyville; E. M. Ginquick, South Bend, Geo. T. Heinl and F. G. Heinl, Terre Haute.

Geo. H Rackham, J. F. Sullivan, E. L. Beard, Gus. Taepke, T. F. Brown, Hugo Schroeter, Wm. Dilger, Detroit; Geo. F. Crabb, Wilfred Hannah, G. A. Hannah, Henry Smith, Grand Rapids; Elmer D. Smith, Adrian, Mich.; Jno. Carey and Robert Klagge, Mt. Clemens; Albert Boehringer, Bay City; H. W. G. Goetz, Saginaw, A. M. York, Hancock.

C. S. Weaver, M. Reukauf, S. S. Skidelsky, Philadelphia; S. Alfred Baur, Erie, Pa.; John Bell, Franklin; Ben. L. Elliott, Cheswick; H. L. Blind and Fred. Hinkle, West View; E. McConnell, Sharon; A. M. Herr, Lancaster; J. W. Fredericks, Pittsburg; J. B. Swayne, Kennett Square; Fred. Burki, Bellevue; John L. Wyland, DeHaven.

William F. Kasting, wife and baby, D. B. Long, William Scott, Miss O'Hara, Buffalo; C. T. Guenther, Hamburg, N. Y., L. E. Marquisee, Syracuse; T. J. Totten and T. J. Totten, Jr., Saratoga; P. M. Pierson, Scarborough; C. W. Ward, Queens; Alex. Wallace, J. Begbie, New York city; C. H. Roney, Jamestown; A. Herrington, Madison, N. J.; E G. Asmus, West Hoboken.



HOUSE OF CARNATION HARRY FENN AT THE COTTAGE GARDENS, QUEENS, N. Y.

Jacob Schulz, August Baumer, C. W. Kunzman, J. Coenen, J. J. Wunderlic, Wm. Mann, Victor Mathias, Adam Hertz, Henry Fuchs, Louisville; T. L. Metcalf, Hopkinsville, Ky.; Thos. Windram, Fort Thomas; S. M. Harbison, Danville.

Frank M. Ellis, Mr. and Mrs. H. G. Berning, St. Louis; Geo. M. Kellogg, Pleasant Hill, Mo.; J. C. Rennison, Sioux City, Ia.; W. E. Kemble, Oskaloosa.

Wm. Clark, Colorado Springs, Col.; J. A. Valentine, Denver; Chas. P. Dudley, Parkersburg, Va; W. R. Pierson, Cromwell, Conn.; Alex. Montgomery, Jr., Natick, Mass.; W. Sims, Cliftondale; E. N. Pierce, Waltham; Wm. Nicholson and Mrs. Nicholson Framingham; T. C. Joy, Nashville, Tenn.; Nic. Zweifel, Milwaukee, Wis.; Henry Weber and Wm. Weber, Oakland, Md.

Walter Muston and John H. Dunlop, Toronto, Ont.; Wm. Gammage, London; Ed. Dale, Brampton.

B. D. Kapteyn, Sassenheim, Holland; John Schleepers and L. Van Leuwen, Hillegom.

Criticism of Growers' Methods.

BY E. G. GILLETT, OF CINCINNATI.

When Willis N. Rudd suggested that I prepare a paper upon this subject he also guaranteed to fight all my battles should I tread a little heavy upon any grower's toes. So if their is any "kick coming" when I get through, just kick Brother Rudd.

Growers' methods are divided into classes, large, medium and small. Growers themselves are divided into the same number of classes. The larger class are those who are backed by sufficient money to have all the needful appliances to conduct the business on a paying basis. If he is not a grower himself, he has money enough to buy the brains of someone who does know the latest and best methods of growing flowers, and money enough to employ help to take care of the plants while growing. The medium grower generally has to rely upon his own resources, with what help he is able to hire, and the small grower follows suit.

We are all working to the same end, the almighty dollar, but how to get that almighty dollar has been a great stumbling block to many of us. Many dollars are lost yearly by growers who do not understand the best method to pursue after they have grown their flowers ready for market. Of course, the first thing one must do is to consign his flowers to a commission house to sell, and in order to make money he must make his shipments regularly, and he must stand by his commission man through the gluts that are bound to occur once or twice during a season, instead of hunting up some other market when, for a few weeks, his sales are not as large as he expects, and the reason he well knows.

Another and a very important fact the grower must remember, and especially is this true of carnations and roses, that after cutting they must be placed in a cool room with their stems well submerged in pots of water for at least twelve hours before they are fit to pack and ship to market. Another important fact is the grading of the flowers. More care should be taken in this, though, and especially with carnations, I know that it is a great temptation to many growers to put in "ringers." Possibly you will ask me what I mean by "ringers." It is simply this, and especially is it true of carnations: In putting carnations up in bunches of twenty-six when they are selling at $1.50, $2, $3 or $4 per hundred, if I can ring in two or three short-stemmed, inferior blooms to a bunch, see how much more money I am making, you will say to yourself!

But are you? No. Do you think for one moment that the retailer has not his eyes open? And do you think he does not go down deep into that bunch of carnations and count the "ringers"? If you think he don't, just be a commission man for awhile and see. We "poor devils" have to carry water on both shoulders, and we catch it coming and going. Gentlemen, I plead of you right here, don't put in "ringers." And especially you carnation men, give the retailer value received for his money and don't try to make him pay for something that's not worth the price. Be more careful in your grading and be sure that you put twenty-six carnations in every bunch. With the above method I will guarantee you will make more money, and there will be no cause for many now unpleasant remarks. And right here I would like to say a few words in regard to packing flowers for market.

First, don't jam their noses against the end of the box, causing them to look as though they had been in a prize fight. Second, always pack in layers from each end of the box, bringing the bulk of the stems to the center. Then cut a cross-piece, place same in the center of the box, press down firmly and fasten securely. In this way your flowers will stay just as you place them, and arrive in good condition, it matters not how roughly the express messenger handles them. Third, don't sprinkle carnations or roses after you have carefully packed them, and especially is this true of carnations, as it simply ruins them. I have received many a box of flowers that were virtually ruined by the water.

But, I believe the growers are beginning to wake up. They are using better methods. They are learning to take care of their crops after harvesting, and if they will be a little more careful in grading their stock and also in growing their flowers, it will be much better for all concerned. One more point. What grade of carnations should be grown to pay the grower, "Quality or Quantity?" You will find growers who differ on this question, but, gentlemen, let me tell you right here that the man who grows quantity of quality is the one who makes the money. All fancies will not do, because all people do not care to pay fancy prices.

All poor grade will not do, because you cannot sell them for a living profit. Then, which shall we grow? The mediums, that will wholesale at $2, $3 and $4 per hundred. These are the money-makers, the ones which will make the grower, the commission man and the retailer happy.

When on September 6 the news was flashed across the continent that the Chief Magistrate of these United States had been assassinated, there was not a man, woman or child that was not bowed in grief, and especially pained were the florists of all others. Why? Because it was this grand man who signed the charter that makes the florists of the United States a national body, but not only this, it was he who loved the carnation above all other flowers, and was the prime cause of its being adopted as a republican emblem and is now discussed as the national flower. It was the growers' methods that were the cause of all this. Had they not been progressive they would not have caused the above to be facts.

A few years ago the carnation was only an infant, but it had a father in Fred. Dorner, Sr., who, by his untiring energy, has brought the divine flower to the position in society that it holds to-day. Progress in growers' methods has placed the florists in the front ranks, and the statistics at Washington show that in the United States in 1899 $18,387,420 worth of flowers and foliage plants were raised, with 6,159 establishments, the value of which with land and buildings amounts to $50,619,866. Why should we not be proud of our profession and why should we not be proud of our growers and their good methods, which have placed us on a level with the best commercial interests of the country? But we will not stop here in our race for supremacy. We must gain more laurels. We must use the better methods that are coming up from day to day and advance the interests of floriculture as it so justly deserves.

CARNATION MRS. E. A. NELSON.

Sterilized Soil for Stem-rot.

BY WALLACE R. PIERSON, CROMWELL CONN.

Among the enemies of the carnation there is one to be more dreaded than all others and I have been asked to bring forward, for the consideration of the society, sterilization as a preventive of stem-rot. I believe this matter was discussed at the Baltimore meeting, but I find no one who has carried out a thorough test of sterilization, and, while our experiments have not been by any means as thorough as they might have been, yet their extensiveness may make them valuable and I take pleasure in bringing before you a report of our work.

It has been my good fortune, the past three years, to be associated with Dr. G. E. Stone, of the Hatch Experiment Station, of Amherst, Mass., and it is to him that I owe my interest in sterilized soil. While a student at college I followed the experiments of Dr. Stone on the cultivation of lettuce, and taking up at the same time the study of carnation diseases, I found that we are fighting a common enemy with the lettuce growers, namely, the sterile fungus rhizoctonia, which causes the so-called wet-rot of carnations. This has been described in Bulletin 186 of the Cornell Experiment Station, and no doubt this fungus is well understood. I will not attempt a description of it but I wish to quote a paragraph from that bulletin, which reads:

"This stem-rot is one of the most troublesome of the carnation diseases and probably occurs throughout the whole United States wherever the carnation is grown. Frequently entire houses of mature plants are destroyed by it. During the past autumn it appears to have been unusually prevalent. It attacks plants of all ages, both in the field and in the greenhouse, and is one of the principal causes of damping off of carnation cuttings. In greenhouse benches it spreads slowly through the soil from one plant to another, but according to our experiments never through the air, as from one bench to another. Its principal mode of dissemination is by means of affected plants and cuttings."

This fungus also attacks lettuce and Bulletin 69 of the Hatch Experiment Station treats of the attack of the fungus on lettuce in a very clear and concise manner. Comparing these two and knowing that sterilization prevented the attack on lettuce I became convinced that wet-rot of carnations could largely be prevented by the same method. There is, however, an important point to be taken into consideration, and this is that in the growing of lettuce the seed can be started in sterilized soil and the plants grown in it from seed, while with carnations the planting in the field would subject them to the attacks of the fungus and cause error in our work, even were they rooted in sterilized sand and potted in sterilized soil.

There is another rot of carnations with which we are all acquainted and this is the subject of an article by William C. Sturgis, which may be found in the Report of the Connecticut Experiment Station for 1897. This is known as dry-rot, and I again take the liberty of quoting:

"The spores of the fungus are apparently able to retain their vitality for several months and to live over winter in the earth. The fact that the disease can be transferred to sound cuttings by planting the same in soil containing vegetable matter and impregnated with the spores of the fungus indicates that the spores can thrive in such soil and thence gain access to the tissues of the plant. Consequently when the disease has been present in the greenhouse the old soil should be completely removed, the house thoroughly fumigated with sulphur and the benches refilled with fresh soil. Abundant moisture and an excess of vegetable matter in the soil afford conditions favorable to the development of the fusarium. These should be avoided as far as possible. Wherever practicable sterilizing the soil by means of steam or hot air would be effective in preventing the attacks of the fungus. In this case, diseased cuttings could be the only possible cause of contamination."

The preceding shows that we are working under difficulties and that our tests are liable to error, for I have no way of knowing what percentage of my plants were already attacked by rot when they were benched, but I will give you as accurately as I can the facts as they really are and you may judge from them whether there was sufficient gain to warrant the expense.

We have this year four houses, each 300 feet in length, devoted to carnations. These differ in width, being thirty-six, thirty, sixteen and sixteen feet respectively. The first house planted was one of the sixteen-foot houses and in this there are two benches, four feet four inches in width, running the length of the house, a cross-walk at the center dividing these, making practically four benches, each a trifle less than 150 feet in length. Let us follow the method of handling a house, and for the sake of convenience call the benches by numbers. Let us designate the right-hand benches No. 1 and No. 2 and the left-hand benches No. 3 and No. 4. The soil is wheeled in on the left-hand benches and we fill the right-hand benches as we would fill them with no reference to sterilizing, filling each bench even with soil after putting about an inch of well rotted cow manure in the bottom. We then lay our system of coils and after putting on 8-inch side boards we fill the soil for bench No. 3 and bench No. 4 into No. 1 and No. 2, or rather No. 1 and No. 2 extended, but in reverse order; that is, with the manure which is to go into the bottom of the other benches on top. This is now ready for the steam, which is gotten up and turned on by the night man, as we usually do this work at night, and when steam at a pressure of from thirty to forty pounds has been forced through the soil for a couple of hours, complete destruction of all animal and vegetable life is assured.

Now to describe the coils. We run a temporary main from the boiler, of 2½-inch pipe and extend this through the center walk the length of the house. At distances of fifty feet we put in tees and connect at these points with the coils by means of a hose, which can be obtained especially adapted for the purpose. The coils are made up of headers and perforated pipes. The length of the header we vary with the width of the bench, screwing on nips and tees as needed. This is necessary, for the coil must be as wide as the bench to insure approximately perfect sterilization.

At right angles to the headers and parallel to each other we run perforated pipe. These are about ten inches apart. Thus, a bench four feet four inches in width would require a header four feet two inches in length and five lengths of 1½-inch perforated pipe. We have found that we can handle steam to the best advantage by having headers fifty feet apart and by connecting each header with the main, and we have also found it economy to have the whole house ready and to sterilize it all at the same time, as it requires but little more steam to do this than to sterilize a single section, and time will be lost waiting for the soil to become cool enough to permit handling. To do this twelve headers and about 1500 feet of perforated pipe are necessary, but if much of this work is to be done the outlay will not be great in proportion. Second-hand pipe is just as serviceable and if leaky, so much the better, for the more leaks the less boring there will have to be done.

The question of expense is important, for to have the method practicable there must be a limit to the cost of the operation. We compute the cost of sterilizing a house 16x300 feet at about $25, or in other words it doubles the expense of preparing a house for planting. This is, however, a comparatively small consideration, for if there is a saving of fifty plants to do a season's work, counting on a return of 50 cents per plant, there will be a saving of $25, or the cost of sterilization, and I think that our results have shown a greater saving than this by far. The work of the Hatch Experiment Station has given some very valuable results, and yet their computations on the cost of sterilization cannot be sustained by general practice for it is a much simpler operation to sterilize soil where there are no benches than where benches are used, as in our carnation houses.

Our first carnation house benched was planted with the Marquis and there was

CARNATION WILD ROSE.

a loss of perhaps a dozen plants from stem-rot in this house. I did not work the houses the year previous but I remember the representation in some parts of the bench of Marquis at December 1 was very scattering. Compare our loss of perhaps a half dozen Lawson, from some 1,500 plants, with that we have heard reported by others (I call to mind one report of 1,500 from 5,000) and I think you will agree with me that our loss has been slight. It has been so slight, indeed, that we consider it to have been entirely overcome. We have, however, suffered more from dry-rot than from wet-rot, but even this has been small when compared with the loss of previous years. Taking the result as a whole I feel safe in saying that we have found sterilization a preventive of stem-rot.

In conclusion, let me say that I do not believe sterilization a cure for stem-rot but rather a method of prevention. I look at sterilization as an insurance that you place upon a crop. You insure a vessel load of coal, yet the plants on which you depend to pay for the coal you do not insure without sterilization and when this can be done at a reasonable expense I believe in so doing. I do not think that better carnations can be grown in sterilized soil than in soil which is not sterilized, but I believe it gives you a greater certainty of keeping your benches full and thus a greater certainty of good financial returns. It gives you the assurance at the start that your soil and benches are free from fungus, from eelworm, from earthworm, from aphis, from red spider and, in addition, from weed seed. This latter fact would alone make sterilization of value. If we know exactly what our soil contains and can be sure that we are not taking in what will be detrimental there is no need for sterilizing, but this we do not know. We know, however, that it makes us practically certain of our crop and this certainly repays us for our labor.

We have grown roses, chrysanthemums and violets, in addition to carnations, in sterilized soil and with results which have exceeded our anticipations. I will be glad to throw more light on this subject if it is in my power to do so, and I thank you for the honor which you have done my father and myself in asking for this report, which I take pleasure in presenting to you.

Wallace R. Pierson.

We present on page 113 the portrait of a promising representative of the younger generation in the American floricultural profession. The son of a successful florist, he has been brought up in the most favorable conditions to learn the practical elements of floriculture under a good teacher. He graduated from the Massachusetts Agricultural College in June of last year and at once assumed charge of the carnation department of A. N. Pierson, his father, at Cromwell, Conn., a position he is likely to hold, as he takes a deep interest in it and because, as he naively remarks, he "has a pull with the boss." When a student at the Agricultural College he made the study of plant diseases a specialty under the instruction of Dr. Stone, whose preceipt, "prevention rather than cure," Mr. Pierson has adopted as his own guiding text. His paper on the sterilization of soils, read before the American Carnation Society, which we publish in this issue, is well-worthy of careful perusal. Mr. Pierson was born on May 5, 1880, and is therefore not yet 22 years of age.

The other two gentlemen who delivered addresses on this occasion, C. W. Ward, of Queens, N. Y., and E. G. Gillett, of Cincinnati, are well known to the trade.

"Injeanny."

BY J. A. E. HAUGH, ANDERSON, IND.

(AFTER RILEY.)

Some folks say "Injeanny" is small taters in the hill.
I argy, that sech silly talk comes only from ill-will.
Ef 'stead of throwin' mud at us, they'd stop an' 'vestigate,
They'd purty soon make change of tune, want us fer runnin' mate.

Some say we air so small. So's dimuns. Surely you'll admit
To swap one fer a load of hay, would show but leetle wit.
Most oft you'll find the melon that's the larges' in the store,
Has, where the sweetes' part should be, jes' a big holler core.

An jes' to show the reasons why us Hoosiers air so sure
That our's about the only state, I'll now upon this floor
Give you some fac's to think about, an' then I bet you'll say
Ef you could only pull up stakes, you'd come right here and stay.

CARNATION GOODENOUGH.

CARNATION CHALLENGER.

CARNATION SYLVIA.

THREE OF THE SEASON'S SEEDLING OFFERINGS BY EASTERN CARNATION GROWERS.

A fertile sile on ev'ry side, yields bountous craps each fall.
An happear homes cannot be foun' on this turescbual ball.
Each kounty seat's a hustlin' town, with factrys rushed pellmell.
An not a spot but you can hear a janglin' enjine bell.

An' we air proud as proud can be of many a favrite son,
Who'se made by some great deed, a name good nuff fer anyone.
An' Morton, Colfax, Hendricks, air honored o'er the lan'
But first of all is Harrison in this immortal ban'.

Jes' give Jim Riley pen an' ink an' set him down to write,
True nater's pitcher then you'll see put down in black an' white.
You'll smell the blossom's fragrunce, see the rustlin' of the pines,
An' hear the bees a hummin' in the sprawlin' punkin vines.

An' where's another Wallace, with a book like his Ben Hur?
A chap sets down to read it, by gum, he cannot stir.
Booth Tarkintun, an' Egglestun, air churist by all han's,
With Thompson, he who writ the book "Ole Alice of Vinsans."

To bring this balky dunky leetle nearer to his cart,
I'll tech now on a subjec' lying closes' to my heart,
That is, in raisin' posies, what are strictly up to date,
You'll hunt along time 'fore you'll find the ekwill of this state.

Big Sandy Grau, our florist sez, with one of his slow winks,
That, "We beat all creation when it comes to growin' pinks."
"Kharnations," what he calls 'em; sez, "For that there is to blame
A collige edycation which has shamed the good ole name."

Sez, "Right here in Injeanny an' nourished in our sile,
Has 'riginated more than half that'a made the flourist pile.
An' some air red, and some air white, an' pink an' stripped too,
With fragrunce like a clover fiel' all wet with mornin' dew."

"'Way up along the Wabash lives a great an noble soul,
As modest as a woman, as pure as finest gole.
He'll ne'er admit the honor that his tireless labors bring.
We hail thee, gentle Dorner, as the world's Kharnation King."

"Of three score of his seedlin's," said Sandy, "on the spot
I 'member of the famous ones the great an' only Scott,
An' Albertoeny, Mary Wood, an' Crane, an' Missus Bradt,
With White Cloud, Dazzle, Lorna, knocks the other florists flat."

"Of quite another pattern is the joval Gurney Hill,
A tale of his will make you laff till you air almos' ill.
He'll ask, 'How's trade, an' how's the wife an' folks you left this day,'
Take such an intrus' in your 'fa'rs, 'twill drive your care away."

"Retirin! No," said Sandy, with a sort o' sickly grin,
"They don't call me an 'easy mark' but he ken rope me in!
For though the stuff he sells me will most usu'l swell my cash,
My wife will shake her head an' say, 'Now Sandy, you're too brash.'"

"How he ken get sech seedlin's is a puzzle sure to me!
He's sent out Triumph, 'Merikee an' Hartje's Jubilee,
An' Flora Hill, named fer a maid dear to her father's heart,
An' Gaiety; but why name more, they're sold in every mart."

"Not fur from Hill is Missus Grave, with sech a model place,
An eastern chap who visits her goes 'way with envous face.
Her Dorothy shows blossoms with a freedom jes' as rank
As April vi'lets in the grass upon a Southern bank."

Sez Sandy, "There air others who have seedlin's up in G'
Why, Nelson, he has introjuced one good enuff fer me.
There's 'Nuby,' Peru, Hoosier Maid, an' Stuart'a Avondale,
Which he declares if you but grow, your trade can never fail."

"To still a doubt 'bout our supply an' any fear relieve -
We haint a florist but has got a seedlin' up his sleeve.
An' we will do our very best, oh, you may bet your buttons',
To sell the stock to all the world of needed rooted cuttins."

These reasons air not many, an' there's dozens more beside,
Why all us Hoosier folks do seem puffed up with sech a pride,
An' if there is a felier wont admit now our renown,
We'll ask him very kindly "to go 'way back an' set down."

Some of the New Carnations.

One of the men who seeks to fill the want for an ideal white carnation is Sidney Littlefield, who calls his seedling Goodenough. The flowers are pure white and about three inches in diameter; on straight, strong stems averaging two feet long. The calyx is strong and the variety is said to be an early and continuous bloomer. It is a seedling of 1897, the parentage being a white seedling crossed with McGowan. The parent seedling itself was a cross of Portia and McGowan. Mr. Littlefield says of this that he can cut from twenty to fifty per cent more first-class blooms per square foot of bench than he can of anything else he has ever grown. It does best in a night temperature of from 52° to 54° and kept a little on the dry side. The first crop in the fall comes rather single.

Another of the promising whites is Sylvia, grown by Woodfall Bros., Glen Burnie, Md. It is a good-sized flower, on a fairly heavy stem, and for freedom of bloom the originators maintain that it beats anything they ever tried. It is not a cropper and the plants are free from disease.

Carnation Wild Rose is the product of Walter S. Nichol, Barrington, R. I. The general character of the plant is shown in the illustration opposite. The flower is of a very attractive shade of light pink and the originator has found it a good seller. The stock is healthy and the variety is said to be an early and continuous bloomer.

Challenger, now being grown by William Hoffman, of Pawtucket, R. I., is the result of a cross between Jahn's Scarlet and a red sport of Mrs. Bradt. In habit the plant is much like Mrs. Bradt, but its growth is more vigorous and the foliage is of a very decided bluish tinge, so pronounced that visiting florists always remark it. The color of the flower is bright scarlet, without a trace of the brick color so commonly seen in scarlet seedlings. The calyx never bursts and

the stem is long and strong unless grown too warm, 50° night temperature being best suited to it. The plant makes no surplus grass and it is an easy propagator, although taking a little longer to root than some varieties.

C. W. Ward says that his new Harvard crimson, Harry Fenn, is fully as prolific a bloomer as General Maceo, which he introduced some years ago. An actual record shows that it has produced in a season two and one-half times the number of blooms per square foot that were cut from a bench of Gov. Roosevelt. This may be partially accounted for by its compact habit, which permits of its being planted closely on the benches. It is a pedigreed seedling of the Roosevelt-Maceo family, a large flower of brilliant color, full and symmetrical, poised on good stems. The photograph reproduced on page 114 was taken last November.

Alba, exhibited by Fred. Dorner & Sons Co., Lafayette, Ind., is described by the originators as surpassing all other whites. It has a silvery sheen which adds much to the flower, which is large, fragrant and on strong stems. The form of the flower is excellent. The first flowers come early and are large and perfect. Although the first stems are not long they quickly become all that could be asked. The plant is vigorous and produces no surplus grass. One of the unusual features attending the dissemination of this variety is that the season's propagation is limited to 25,000 cuttings.

The Balduin Controversy.

The Balduin re-naming business has been a live topic these past few months, and the Florists' Club of Philadelphia has been the storm center. In that connection I want to enter a protest against some bad reporting. To make the thing clear here is a brief resume of the matter at issue:

A committee of the Philadelphia club made a report at its January meeting implicating Messrs. Dingee & Conard and Myers & Samtman, one or both, in knowingly sending out an old rose under a new name. Both parties had a chance to vindicate themselves before the committee but did not think it worth their while, until after the report had been taken hold of by the press and given wide publicity.

Realizing when too late, one of the parties (Messrs. Dingee & Conard) made haste to minimize the effect of the exposure by asking the committee to find from proofs which they submitted that the other parties (Messrs. Myers & Samtman) were the guilty ones. This the committee consented to do and a motion was made on the floor at the Florists' Club meeting by Robert Kift that said report be received and published in the horticultural press. Another member of the club (the writer) not deeming that it was a proper function of the club to go into the publishing business, offered as an amendment that the report be received and spread on the minutes, that being the course pursued with the original or January report. After some discussion the amendment carried.

Now comes Robert Kift as Philadelphia correspondent of the AMERICAN FLORIST, with this misleading version of what took place: "While the club accepted the supplementary report of the committee on the Helen Gould rose they did not care a picayune whether it was published or not and so voted."

That statement, in so far as it accuses the club of "not caring a picayune" is emphatically denied. Every member of the press who cared for a copy of the report had just as free an opportunity of getting the second as the first report, as exactly the same course was taken with both and Mr. Kift should have so reported instead of trying to mislead the public and place in an odious light those members of the club who did not agree with him. Also he should have used the word "Balduin" instead of "Helen Gould."

Mr. Kift was equally successful in how not to tell the plain facts in his report about the bowling matters which appeared in the same article but as these were only of local interest they may be dismissed with bare mention, and a caution to beware of not sticking strictly to the facts.

Bad habits are easily formed and however able or eminent a man may be he is liable to blackslide and has to keep careful watch and ward over his intromissions, especially if he is the trade mouthpiece of Philadelphia for an important public journal like the AMERICAN FLORIST.

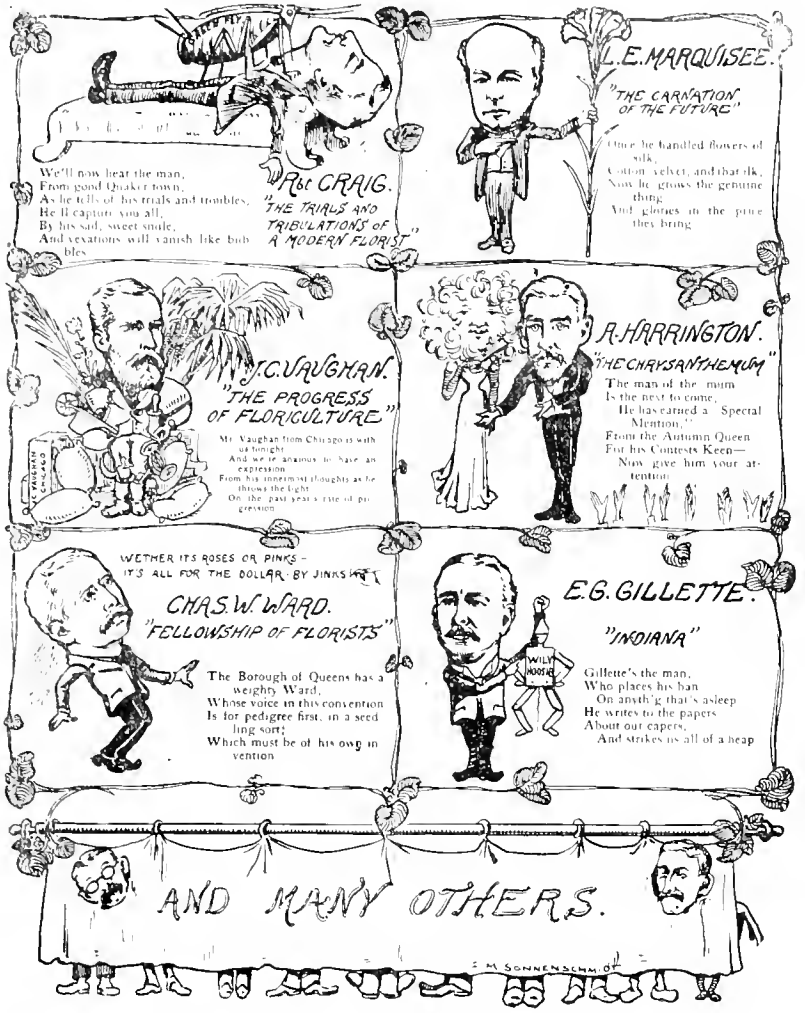
Twisting news is a bad habit. Suppressing news is another bad habit. If I held an official position like "R. K." I would expect to be called down were I guilty of either bad habit. I would like to know why "R. K." did not send on the supplementary report of the Balduin committee. It looks to me like a clear case of suppressing public news to gratify private and personal feeling.

G. C. WATSON.

Chicago.

SUPPLIES INCREASE WITH NO CORRESPONDING IMPROVEMENT IN DEMAND.—ROSE MARKET EASIER AND COLORED CARNATIONS ACCUMULATING.—BULBOUS STOCK VERY PLENTIFUL. — CHICAGO DELEGATION TO THE CARNATION MEETING.

The week has brought something of a lull in business, but it is probable that the apparent lack of life in the call for stock is largely accentuated by increased supplies. The condition noted in Hunt's market letter to the trade at the end of last week, wherein it was stated that carnations were already beginning to accumulate and rose shortages easing up, is apparent in most of the houses. There are quantities of short Beauties remaining with some of the large producers, but the medium grades are still under the demand. In tea roses there are now adequate supplies for all reasonable requirements, but Meteor and Golden Gate must be very good indeed to move satisfactorily. White carnations are still cleaned out at excellent prices, but the accumulation of pink and red is becoming serious. There are very large daily receipts of violets, more than can be moved to advantage, although a large part of the stock is of very fine quality and little more than $1 per hundred is asked. Bulbous stock is very plentiful; even calla lilies are hanging fire. There are large quantities of freesias awaiting a customer and a good many Romans and



PAGE FROM THE MENU FOR THE INDIANAPOLIS CONVENTION BANQUET.

Paper Whites. There are daffodils everywhere, but tulips seem to be doing a little better. It is probable that lily of the valley was never more plentiful in this market and certainly better stock was never offered at the price. There is a very good call for greens and wild smilax has been moving well, although the call for it will probably let up a little during Lent.

The Chicago party bound conventionward left Tuesday evening in a special car on the Pennsylvania and had a merry time. It was a good sized delegation, including Jas. Hartshorne, Frank Fischer, Emil Buettner, W. N. Rudd, Peter Reinberg, F. F. Benthey, Geo. Weiland, Adam Zender, W. G. Earle, G. H. Pieser, Geo. M. Garland, Henry Wietor, C. L. Washburn, Andrew Benson, Wm. L. Kroeschell, E. C. Amling, C. A. Samuelson, Chas. Schweigert, A. Hills, J. S. Wilson, J. C. Vaughan, Anton Then, Fritz Bahr, John Thorpe, Ed. A. Kanst, W. L. Palinsky, Edgar Sanders, G. L. Grant and M. Barker, J. B. Amphlett, Ionia, Mich.; C. W. Johnson, Rockford, Ill.; J. C. Rennison, Sioux City, Ia.; Wm. Clark, Colorado Springs, Col.; W. E. Kemble, Oskaloosa, Ia. And several others, among them J. D. Thompson, went in advance of the main party, stopping en route. Many visited New Castle, Richmond and Lafayette before returning home.

Basset & Washburn will plant no more Bride, Bridesmaid or Liberty on their own roots next season. They will carry over the grafted stock which they are forcing this winter and have imported 70,000 Manetti stocks, which are being grafted up for next season. They say that possibly they get no more flowers from grafted plants but that they get better stock, particularly early.

Messrs. H. T. Harman and A. L. Vaughan, of E. H. Hunt's, who have been traveling in Ohio and Indiana, were at the Indianapolis carnation meeting, where they had a large showing of their novelties in the supply line.

Otto Miller, a glazier at M. Weiland's, at Evanston, stepped out from the greenhouses upon the St. Paul railroad tracks Saturday evening and was instantly killed by a train which he did not see approaching.

There is a very attractive flower show at the Douglas Park conservatory. Chas. T. Zapel, the head gardener, says that there are sixty-five varieties of azalea in the display.

N. J. Wietor says that they would like to grow a house of La France rose for next season if they know where to procure the stock.

The first Hollander to strike the town was W. Taat, of M. Van Waveren & Sons, Hillegom.

Henry Muno is again on duty in charge of his father's wholesale store after a brief illness.

John Zeck, of Budlong's, has been on the sick list this week.

Mrs. C. L. Washburn is again quite ill.

Visitors: Besides others en route to the convention were A. M. York, Hancock, Mich., and H. E. Philpott, Winnipeg, Man.

St. Louis.

CARNATION EXHIBITION AT THE CLUB MEETING ONE OF MUCH INTEREST.—EXHIBITS OF EXCELLENT QUALITY.—TRADE FAIRLY ACTIVE AND FUNERAL WORK HEAVY.—PRICES WELL MAINTAINED BUT DECLINE LIKELY SOON.

The carnation show held at the regular monthly meeting of the club, Thursday, February 13, was well attended and a very good but not large display seen. The judges were Fred. Weber, Otto Koenig and Max Herzog. The best vase was one of Enquirer from R. Witterstaetter, of Cincinnati; Estelle, another of Mr. Witterstaetter's, was much admired. The E. G. Hill Company, of Richmond, sent an unlabelled box of a very fine pink carnation supposed to be Cressbrook. The Chicago Carnation Company had four vases on exhibition. The best of these was Mrs. Higinbotham. The committee highly recommended it. The other varieties were Mrs. Potter Palmer, Bon Homme Richard and Chicot, all good, but the latter must have been cut just before packing, as it showed marked signs of going to sleep.

Fred. Ammann, of Edwardsville, had two fine vases on exhibition, one of White Cloud and the other Genevieve Lord. W. L. Hucke, of Belleville, was the only one to exhibit Mrs. Thos. Lawson and these were very fine. F. J. Fillmore had an excellent vase of mixed carnations which were admired by all. The vase of over 100 blooms exhibited by J. W. Dunford was a magnificent sight. Mr. Dunford had, as well as older sorts, most of those that he mentioned in the paper which he read during the session and which was published in these columns last week. A vase of seedlings by A. Jablonsky was viewed with favor, especially his No. 6, a dark maroon or crimson of the Roosevelt type, and No. 1, a white. Robert Tesson also showed a vase of seedlings that were very good.

Mr. Herzog had set up a microscope with a captive thrip between two slides of glass, which was viewed with much interest. The scholarship at the Missouri Botanical Garden which is awarded by the club was given to William Polst, a member. This scholarship is at present held by Rudolph Mohr but he will graduate this spring and Mr. Polst will take his place in April for a four years' course. The next meeting will be held March 13 and will be the annual rose meeting.

The market is about as last week, but funeral work was never heavier and everything in white and light shades is bringing good prices. Roses are coming in more plentifully but the price still stands at from $5 to $10. However, a decided fall in prices is expected shortly. American Beauties are very scarce and very few good ones can be had at less than $5 per dozen. Some very fine carnations are being sent in, but the whites are fewest in number and are in greatest demand. The St. Louis Carnation Company is sending in some excellent flowers. They have a few Prosperity which are very good. Violets are in heavy supply and the price has gone down to from 50 cents to 75 cents per hundred. All bulb stock is sold at from $2 to $3.

Fire in one of the greenhouses at the Missouri Botanical Garden did slight damage except to destroy a fine collection of seedling acacias and injure some pandanuses so badly that they had to be cut down. Prof. Trelease is on a trip to Yucatan.

Visitor: Geo. M. Kellogg, of Pleasant Hill. R. J. M.

THE AMERICAN FLORIST

SEVENTEENTH YEAR.

Subscription, $1.00 a year. To Europe, $2.00. Subscriptions accepted only from those in the trade.

Advertisements on all except cover pages, 10 Cents a Line, Agate; $1.00 per inch. Cash with Order.

No Special Position Guarantsed.

Discounts are allowed, **only on consecutive insertions**, as follows—6 times, 5 per cent; 13 times 10 per cent; 26 times, 20 per cent; 52 times, 30 per cent.

cover space sold only on yearly contract at $1.00 per inch, net, in the case of the two front pages, regular discounts applying only to the back pages.

The Advertising Department of the AMERICAN FLORIST is for Florists, Seedsmen and Nurserymen and dealers in wares pertaining to those lines *only*.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Wednesday to secure insertion in the issue for the following Saturday. Address

AMERICAN FLORIST CO., Chicago.

AND now in March the rose will have its inning.

THE consensus of opinion among glass jobbers seems to be that a small rise in prices is only a matter of a few days.

AZALEAS are in every window, and as a general rule the poorer the plant the more crepe paper there is around the pot.

THERE will be an unusual demand for well grown bedding stock this spring. It will be a mistake to start prices too low.

THE estimates for 1903 of the U. S. Department of Agriculture carry $118,000 for investigation along the lines of vegetable pathology and physiology.

THE mailing label on your paper shows when your subscription expires; when you send your renewal note that the date changes within two weeks; it will serve as your receipt.

THE American Rose Society is in receipt of a silver cup valued at $125, from Mrs. Clarence Mackay, for twenty-five American Beauties on not less than five-foot stems, to be shown at the March exhibition, competition open only to amateurs.

THE National Sweet Pea Society of England is evidently flourishing, judging from the report presented at the first annual meeting, January 28. The next annual exhibition will be held at the Royal Aquarium, London, July 25 and 26.

A REWARD of $25,000, says an English contemporary, is offered by the Department of Agriculture of Queensland, for the discovery of a means of eradicating the prickly pear pest, which is a cactus imported from America. The remedy must not cost more than a certain sum per acre.

ALBO-GRANDIFLORA is another new variety of Begonia Gloire de Lorraine, a large-flowered albino form and one that is remarkably free. Apparently the plant is all that can be desired, says the *Gardeners' Magazine*, but the plant would be even more desirable were the large flowers a purer white.

Couldn't Do Without It.

ED. AM. FLORIST:—Enclosed is $1 for a year's subscription. I have tried to do without your paper but have decided to come back to the old love.

Philadelphia. E. J. GRAVER.

Chrysanthemum Society of American.

When the business of the American Carnation Society had been concluded early Thursday afternoon, February 20, members of the Chrysanthemum Society of America and others interested to the number of about twenty-five assembled in one of the halls of the German House and soon got down to business, with President Herrington in the chair. Among those in attendance were C. W. Ward, Queens, N. Y.; C. W. Johnson, Rockford, Ill.; Jas. S. Wilson, Western Springs, Ill.; E. N. Pierce, Waverley, Mass.; Elmer D. Smith, Adrian, Mich.; Phil. Hauswirth, Chicago; William Nicholson, Framingham, Mass.; Judge Vesey, Fort Wayne, Ind.; W. N. Rudd, Mt. Greenwood, Ill.; Fred. H. Lemon, Richmond, Ind.; Wm. F. Kasting, Buffalo, N. Y., and others representative of eastern and western sections of the country. The affairs of the society were discussed at considerable length and finally, on the motion of W. N. Rudd, seconded by Jas. S. Wilson, it was resolved that the president and secretary serve as a committee to arrange, if possible, with the Horticultural Society of Chicago for a convention and exhibition to be held next November in connection with the fall show of the latter organization.

This action appeared to be very favorably regarded by those present. It is the first time, we believe, that anything of similar character has been attempted, and many are confident that it means a new era of prosperity for the society. Prompt action was urged and President Herrington gave the assurance that there would be no unnecessary delay in starting the work. The representatives of the Horticultural Society of Chicago present gave it as their opinion that there would be no difficulty in the matter as far as Chicago was concerned. It seems certain that something must be done, and done speedily, to render the society more serviceable, and the development of this movement will, therefore, be watched with much interest.

Philadelphia.

SEVERE STORM CURTAILS PRODUCTION — RETAIL TRADE NONE TOO BRISK AND STOCK NOT SCARCE. — SOME EXTRA CHOICE FREESIAS.—ALL ABOUT PRICES —GROWERS CONCERNED OVER BEHAVIOR OF THE LILIES —FARMERS' INSTITUTE.—OTHER NOTES OF LOCAL MATTERS.

The heaviest snow of the season has just fallen and it looks as if it would make flowers a trifle scarcer, which will probably be a good thing, if it does not at the same time interfere with the retail trade, which is none too good since the arrival of Lent. Flowers have not accumulated much as yet, although fakirs seem to manage to get plenty of carnations to retail at 10 cents per dozen. The growers say that carnations are a little off crop at present, which will not hurt, as it will have a tendency to stiffen prices and keep them off the street. The only thing that seems at all over-stocked is bulbous material, which is now very plentiful, with prices ranging from $2 to $3 per hundred. Lukens' freesia is in a class by itself. It looks almost like a different flower from that carried by the average grower. It is pure white, or with only the faintest touch of yellow, with stems eighteen to twenty inches long, each carrying several spears of foliage and from five to seven flowers or buds. Leo Niesson says it sells on sight at $5 per hundred. Prices are about the same as last week $7 to $8 per dozen for the best Beauties, $12 to $15 per hundred for select teas, $1.50 to $5 for carnations, 50 cents to $1 for double violets and 25 cents to 50 cents for the singles.

The sessions of the farmers' institute held in Horticultural Hall last Wednesday afternoon and evening were very interesting, in fact, the evening session lasted almost until the next day. John B. Lewis told how to handle the caterpillar pest. He thought the best plan was spraying with emulsions of kerosene or crude petroleum. James Boyd told about old-fashioned flowers for the garden in an entertaining manner. Joseph Meehan spoke of the best trees and shrubs, their proper location and when to set them out, giving, as well, other valuable points in their cultivation. Joseph Kift, Jr., had an article on mushrooms that told pretty well all about them His instructions as to the making of the beds and their care were very plain and practical. He also gave an idea as to the amount of profit that might be expected if the crop was a good one and showed that there was not as much in the business as the glowing articles in some of the papers would lead one to believe. There were a number of beautiful specimen cyclamens and Primula obconica, which had been left to decorate the room from the meeting of the Pennsylvania Horticultural Society the night before.

The great topic of the hour with the growers is the lily. First, it is the quality of the stock which some growers are very much dissatisfied with, claiming that they did not get what they ordered. Some claim that there are varieties of lilies known in Japan to be worthless for early forcing but as they cost less than the early forcing kinds they are packed in with them and all sold as first-class. It is a pity these bulbs cannot be told from the good kinds, but it seems that the only way is to find it out when too late to fill up with good stock.

Leo Niessen has the sympathy of the entire trade in the loss of his father, whose death occurred on February 17. M. Rice has also suffered a great affliction in the loss of his mother, who died last Monday. Many floral offerings were sent to the funeral by Mr. Rice's friends of the trade in this city.

Visitors: Paul Pierson, of Tarrytown; Geo. Stewart, of Tuxedo; Geo. Stumpp, of New York. K.

Boston.

A VISIT TO WABAN AFFORDS VIEW OF MANY THINGS OF INTEREST. — MUCH NAMED ROSE ATTRACTING WIDE-SPREAD ATTENTION —LIBERTY DOING FINELY.—GRAFTED BEAUTIES.—COLD WEATHER RESTRICTS RECEIPTS —MOST ITEMS WELL CLEANED UP.—VARIOUS NOTES.

I had the pleasure of a little trip to Waban Rose Conservatories recently, in company with Fritz Breitmeyer, of Detroit, who wanted to take a squint at the "Helen Gould or whatever it is," which is doing so well there, and the grafted roses in general. As grown by Mr. Montgomery, the much named rose shows that there is no question about the beauty of the bud or the continuous blooming of the variety. The country at large seems to have faith in it as the demand for plants is enormous and comes from every section. Mr. Montgomery grows it with about the same treatment as Perle des Jardins but with a little lighter soil. Liberty, with its third crop coming on, is throwing up fine canes from the bottom now. Transplanted

plants did a little better than those left undisturbed in the bed. No black spot has been troubling it this year. One house of Liberty with bottom heat is the least satisfactory. As to American Beauty, both grafted and own-root plants are grown at Waban. The grafted stock seems to carry thickness of stem closer to the tip of the shoot and seems less likely to run blind than is the case with the own-root stock. Among the things that have a fascination for most visitors here is a fine bench of Bon Silene. They bring a smile of cordial recognition to the features of many an old-timer and it is often remarked that the favorite of by-gone days is getting into harness again for another spin. A house of seeding and seedling roses, the especial cozy corner of Alex. Montgomery, junior, is, to those who are honored with permission to enter, a place of engrossing interest, and many good judges will "miss their guess" if something phenomenal does not in the near future emerge from the blooded stock being fostered there. In reply to a question as to the best late white chrysanthemum, Mr. Montgomery named White Maud Dean and Wm. H. Chadwick.

The market has not begun to feel any very serious effects of the Lenten restrictions thus far. Valentine's day coming within two days after Ash Wednesday proved a substantial benefit to the flower traffic and now the return of winter conditions in the form of a lively snow storm and low temperature is restricting the product sufficiently to insure the market against any immediate embarrassing accumulation. With the exception of the bulbous material in its various seasonable forms there is little cut flower stock here at present that cannot be disposed of at a reasonable value and there is a decided shortage of some kinds of green material.

Visitors: H. J. Goemans, Hillegom, Holland; Chas. Schwake and H. S. De Forest, New York; W. H. Moon, Morrisville, Pa.

OBITUARY.

ARCHIBALD NOBLE.

Archibald Noble, of Millord, Conn., died Saturday February 15, aged 86 years. He was for many years in the florist business and was well versed in landscape gardening.

ROBERT MANNING.

Robert Manning, secretary and librarian of the Massachusetts Horticultural Society died suddenly of heart disease, at his home in Salem, on Monday, February 17. Mr. Manning was born at Salem, July 18, 1827. His father was a noted pomologist and he, himself, had wide horticultural knowledge, especially in this branch. He had been for many years in charge of the extensive library of the Massachusetts Horticultural Society and will be missed by those who frequented the reading room. He was most painstaking and exact in the compilation of records and other literature of the society. The funeral was held from the family residence on Wednesday afternoon.

Catalogues Received.

Northrup, King & Co., Minneapolis, seeds; The Geo. H. Mellen Co., Springfield, O., seeds and plants; Vaughan's Seed Store, Chicago, seeds; Bobbink & Atkins, Rutherford, N. J., herbaceous plants; Cooke & McCord Co., Tarrytown-on-Hudson, N. Y., seeds; Jno. D. Imlay, Zanesville, O., seeds and plants; Oscar H. Will & Co., Bismarck, N. D., trees and seeds; J. F. Noll & Co., Newark, N. J., seeds; W. B. Longstreth, Gratiot, O., seeds and plants; American Rose Co., Washington, D. C., Rose Ivory; Wood Stubbs & Co., Louisville, Ky., seeds; The Dingee & Conard Co., West Grove, Pa., roses; Nathan Smith & Son, Adrian, Mich., plants; Archias' Seed Store, Sedalia, Mo., seeds and florists' supplies; L. L. Olds, Clinton, Wis., seeds; Nanz & Neuner, Louisville, Ky., seeds and plants; Griffith & Turner Co., Baltimore, Md., seeds and plants.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of ten cents a line (six words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

Every paid subscriber to the AMERICAN FLORIST for the year 1902 is entitled to a five-line WANT ADV. (situations only) free, to be used at any time during the year.

SITUATION WANTED—By an experienced florist as foreman or to take charge of commercial place. References as to ability and character. Apply S A, care American Florist.

SITUATION WANTED—As florist and gardener on private place; Hollander, single; 20 years' experience. Can furnish the best of references. Address B R C, American Florist.

SITUATION WANTED—By competent florist, first-class grower of roses, carnations and general stock, capable of taking charge, private or commercial; German, married. Address C, care American Florist.

SITUATION WANTED—By florist, good plantsmen and propagator, 16 years' experience; wants to take charge of private place where good and steady man is wanted. Good references. F M, care American Florist.

SITUATION WANTED — By first-class rose grower; 11 years' experience in roses, carnations, chrysanthemums or general stock; 8 years with one of the largest rose growers of the east. Best of references. A B, care Am. Florist.

SITUATION WANTED—As foreman or manager of commercial place. Expert florist, with thorough knowledge of the business. Roses, carnations, 'mums and violets a specialty. W E B, care Mrs. Williams, 427 E. 63rd St., N. Y.

SITUATION WANTED — By a German gardener, 38 years old, thoroughly experienced in greenhouse work. Two years in this country. Or would accept position in a private place. Address PAUL TRZEWIK, St. Cloud, Minn.

SITUATION WANTED — By florist and landscape gardener, 18 years' experience in greenhouses, vegetables and lawns; would like to take charge of private place. Best of references furnished as to ability. Married, no children. L, care American Florist.

SITUATION WANTED — March 1st, in rose-growing, general greenhouse work, or wholesale flower store. About Philadelphia preferred; young man, age 22; references; 5 years' business experience and experience in greenhouse work. Box 33, Aldan, Del. Co., Pa.

SITUATION WANTED—As manager by a practical grower of roses, carnations, 'mums, palms, ferns and general stock; capable of managing a large plant and having the work done in a systematic way. Good wages expected. Good testimonials. MANAGER, 129 N. Clark St., Chicago

WANTED—First-class packer; steady position. Apply to 409 Fifth Ave., New York.

WANTED—Florist, general greenhouse work; state wages. F. BEU, 2780 No. 40th Ave., Chicago.

WANTED—Young man for general greenhouse work. State wages wanted with board. COLE BROTHERS, Peoria, Ill.

WANTED—A young man with some experience in greenhouse work. State wages with board. M. I. O'BRIEN, Sharon, Pa.

WANTED—A first-class orchid, fern and palm grower. Address Box 985, Postoffice, Minneapolis, Minn.

WANTED—By March 1st, young man with some experience, to work in greenhouses; $18 per month and board. Address Box 170, McHenry, Ill.

WANTED—A single man to grow roses and carnations and to look after things in general at times. State wages with board and room. Address C, care American Florist.

WANTED—Practical gardener to take charge of private place; must be willing to work and understand lawns, flowers, shrubs and vegetables. References required. Address B. G. WORK, Akron, O

FOR SALE—Four small greenhouses with dwelling, in city of 30,000. For particulars, address T W R, care American Florist, Chicago.

Cleveland.

FINE WEATHER A GREAT HELP TO BOTH GROWERS AND RETAILERS.—PARTY TO CARNATION MEETING MAKES MANY STOPS EN ROUTE.

The exceptionally fine weather for the past week has been received with joy by plantsmen and dealers alike. It has hustled along Easter stock and stimulated trade in general. St. Valentine's day proved a record-breaker for the sale of violets and bulbous stock. Never in the history of floriculture in this city have violets sold so well, one firm disposing of over 5,000 at retail, and other firms did equally as well. But apart from Valentine's day business has taken on the usual early Lenten depression. Bulbous stock is coming in fine shape, especially Von Sion, Golden Spur and Murillo tulips. Lily of the valley is also fine and sells well. Smilax is becoming a drug. Calla lilies are becoming more plentiful. The quality and quantity of roses are improving.

The delegation from Cleveland to the carnation convention left Cleveland Sunday evening. It comprised the following gentlemen: Adam Graham, Herman Hart, John Merkel, F R. Williams, S. N. Pentecost and Isaac Kennedy. A second delegation departed Tuesday morning. The first named gentlemen arrived at Cincinnati Monday morning and a visit was paid to the establishments of Messrs. Peterson, Witterstatter and Partridge. The next stop was Richmond, where Hill, Grave and Gause were visited. At New Castle the establishments of the South Park Floral Company, Reinberg & Weiland and Benthey & Company were inspected, the party arriving in Indianapolis on Tuesday evening. ECHO.

MARINETTE, WIS.—George Vatter is preparing to add about 4,000 feet of glass to his present range.

NORTH LEOMINSTER, MASS.—R. A. Hillson has leased his greenhouses to E. L. Dirkie, who has taken possession.

VISITED ST. LOUIS: J. W. Begbie, of Clucas & Boddington Company, New York.

LEON ARCHIAS, father of L. H. Archias, of Sedalia, Mo., died at Kansas City February 16.

JOHN LEWIS CHILDS, Floral Park, N.Y., is on a hunting trip with R. D. Hoyt, at Seven Oaks, Fla.

VISITED CHICAGO: Henry A. Salzer and wife, La Crosse, Wis.; Jerome B. Rice, Cambridge, N. Y.; J. E. Northrup, Minneapolis; Chas. P. Braslan, San Jose, Cal.

JESSE E. NORTHRUP, president of the American Seed Trade Association, reports a good programme outlined for the June meeting. At the gathering of the executive committee at Chicago last Saturday Minneapolis was selected as the place for the next annual meeting, the exact date in June to be fixed by President Northrup and Secretary Willard.

PROF. F. LAMSON SCRIBNER, formerly chief agrostologist, Department of Agriculture, now Chief of the Insular Bureau of Agriculture, Philippine Islands, will have his headquarters at Manila. His force consists of five well experienced men, W. S. Lyon, tropical agriculturist; Thos. Hanley, plant culturist, and three others. By the authority of the Philippine commission they take with them when they sail from New York, February 22, between ten and twelve tons of American field and vegetable seeds, between $2,000 and $3,000 worth of agricultural implements and quite a number economic and exotic plants.

New York.

TRADE QUIET AND BUSINESS SADLY INTERRUPTED BY BIG STORM.—ROSES MORE PLENTIFUL.—BULBOUS STOCK SELLING LOW.—CLUB PROCEEDINGS IN PERMANENT FORM.—SOME GOOD EXHIBITS.—VARIOUS NOTES.

It is rather quiet in and about the wholesale flower markets this week. The heavy snowstorm of Monday made lots of trouble for shipments coming in and in many instances the delay was extraordinary, but it made little difference as far as results were concerned, as the demand amounted to but little and still shows but slight disposition to rally. Roses are much more plentiful and prices are on the downward course. The accumulation of bulbous stock is very heavy and daily increasing, so that he who gets the cost of his original investment out of some varieties is doing remarkably well.

At the joint meeting of the American Institute and Eastern New York Horticultural Society on February 12 and 13, first prize for violets was won by Geo. T. Schunemann and second by C. G. Velie. Siebrecht & Son were first for a handsome collection of flowering plants, W. C. Russell for collection of carnations and several vases of roses, and Cottage Gardens for Carnation Mrs. Theo. Roosevelt. Lager & Hurrell made a beautiful exhibit of orchids that were much admired and H. T. Clinkaberry showed a comprehensive group of rare cypripediums.

The proceedings of the New York Florists' Club for 1901, just received from Secretary John Young, is a neat pamphlet containing the essays and lectures delivered before the club during the year, together with the reports of secretary, treasurer and award committees and the list of members and committees. The complete schedule of prizes offered for the Madison Square Garden exhibition next November accompanied it and extra copies thereof may be had on application to the manager, Wm. Plumb, 51 W. Twenty-eighth street.

The steamship Statendam which arrived on Tuesday, February 4, had among her passengers nineteen individuals representing fifteen Holland bulb firms and still there are more to come.

The orchid house in Central Park has now been ventilated for a month by the Chadborn automatic device, which works so satisfactorily that the commissioners contemplate installing it in all their houses.

Harry Schmutz will open a flower store March 1 at 789 Flatbush avenue, Brooklyn.

Some elegant Acacia pubescens is coming in now from H. Maenner, of Maspeth.

Louis Dupuy is in it again this year with fine ericas, lilies, etc., for Easter.

Visitors: Mr. and Mrs. Fred. Danker, Albany.

READING, MASS.—Ingram & Lynes have dissolved partnership and the business will be carried on hereafter by Charles Ingram.

TRADE MARK.

On hand for immediate delivery.

Cycas Stems,

THE AMERICAN FLORIST.

THE NURSERY TRADE.

AM. ASSOCIATION OF NURSERYMEN.
R. C. BERCKMANS, Pres.; R. J. COE, Vice-Pres.
GEORGE C. SEAGER, Rochester, N. Y., Sec'y.
Twenty-seventh annual convention, Milwaukee, Wis., June, 1902.

I. J. BROKAW is establishing a nursery at Palestine, Tex.

PETITIONS in bankruptcy have been filed at Des Moines by Porter & Blattner and Carl F. Blattner, nurserymen, of Prairie City, Ia.

AT Fredonia, N. Y., John H. Foster, for fourteen years foreman for Lewis Roesch, and R. B. Griffith have gone into the nursery business as Foster & Griffith.

AT its meeting last week the Eastern New York Horticultural Society, Geo. T. Powell, president, voted to merge the organization with the New York State Fruit Growers' Association. Lack of financial support was the reason advanced.

C. H. PERKINS, of Jackson & Perkins Company, Newark, N. Y., accompanied by his wife, is spending about two months at Orange, California, where the firm is growing rose bushes in large quantities. Mr. Perkins is also interested in the handling of California products, such as raisins, oranges, honey, prunes and apricots.

Montreal.

LOCAL CLUB CONSIDERING SEVERAL RADICAL MOVES.—NEW PRESIDENT ASSUMES OFFICE.—TRADE GOOD.

George Trussel, the newly elected president, took the chair at the last club meeting. Some vital questions were laid down for discussion at the next meeting, namely, would it be advisable to amend our by-law concerning life members? Would it be advisable to consolidate with the Montreal Horticultural Society? A. Wilshire made a motion that a special committee should be appointed to interview the mayor, one of our honorary members, and seek a grant from the government, as other similar societies have. The committee is A. Wilshire, Jno. Walsh, J. McKenna and W. Whitting. The club will move to other quarters soon and the meetings will be changed to the first and third Monday in each month.

Retail trade is keeping up nicely and the supply seems to be plentiful in most lines although the past month has not been very bright and a furious blizzard struck Montreal in the beginning of February. G. V.

Toronto.

TRADE UNEVEN SINCE THE BEGINNING OF LENT.—STOCK MORE PLENTIFUL.—CLUB MEETING.—VARIOUS TRADE DOINGS.

The regular meeting of the Florists' and Gardeners' Association was held in St. George's Hall February 18. The weather was miserably cold and a steady wind was blowing, so that most of "the boys" were kept at home shoveling coal. Arrangements were made to hold the annual carnation meeting in the Pavilion of the Horticultural Gardens early in March. It is expected that most of the novelties of 1902 will be shown and the display is expected to excel even that of last year. James Goodier, orchid grower of Exhibition Park, had on view some fine specimens of Dendrobium nobile and other varieties.

For the first week of the Lenten season trade has been very uneven. Roses are more plentiful than for the past month and the quality is good. Carnations continue plentiful, white being in the best demand, and most lines of stock are in good supply, excepting Harrisii, which will with difficulty be brought in for Easter. St. Valentine's day is continually getting better from a trade view-point. This year quite a run was experienced on violets, which sold readily in hampers and fancy baskets. Dunlop's are showing some nice lilac plants.

F. C. Miller, who seriously injured his eye last November, has been confined to his home since, but it is expected with better weather that he will regain his former health and vigor.

Grobba & Wandrey are cutting from their house of 25,000 freesias, planted in solid benches and doing exceedingly well.

Jno. H. Dunlop and Walter Muston went to the carnation meeting at Indianapolis. H. G. D.

Madison, Wis.

Trade here has been fairly good since the holidays and the local florists are looking forward to and preparing for lively Easter business. Victor Wayman, with store on W. Mifflin street and greenhouses on E Gorham street, finds all he can attend to. He may put up more glass this year, if the price of material does not go too high.

Fred. Rentschler is now well settled in his new place, which consists of three houses 22x76, two 16x76 and one 17x65 feet. The houses are well built in modern style, with well arranged offices and sheds. He has put in the Evans ventilator and the entire establishment is lighted by electricity. The houses are well filled with good commercial material—too well filled, indeed, and he will put up a new rose house, 16x103 feet this season to give better facilities for his increasing trade

Miss Emma Guillaume, daughter of Mrs. A. Guillaume, of La Crosse, who has been located about a year at the branch retail store, 102 State street, reports that her experience with the new venture has been decidedly satisfactory, with the outlook most encouraging.

Prof. Goff and his assistant, Frederic Cranefield, are busy at the Experiment Station greenhouses with the large class, 300 students, now taking the short course in horticulture.

Among recent visitors were Martin Foley and Wm. Toole, of Baraboo, and Frederic William Taylor, of the Louisiana Purchase Exposition.

OUR PASTIMES.

Announcements of coming contests or other events of interest to our bowling, shooting and cycling readers are solicited and will be given place in this column.

Address all correspondence for this department to Wm. J. Stewart, 79 Milk St., Boston, Mass.; Robt. Kift, 1725 Chestnut St., Philadelphia, Pa.; or to the American Florist Co., 324 Dearborn St., Chicago, Ill.

At New York.

Monday, February 17, was one of the stormiest days experienced here in ten years, but there were three of the regnlars who braved the trip to the bowling alleys and they were helped out by a new recruit, no less a personage than Mr. William Bogart. Ten games were reeled off, of which the following are samples:

Mansfield	194	191	159
Hafner	156	157	184
Lang	224	205	216
Bogart	212	96	73

At Flatbush.

The following is the record made on Flatbush alleys on Thursday evening, February 20:

Player	1st.	2d	3d
H. Daillledouze	135	120	124
P. Daillledouze	121	143	98
Wocker	155	151	168
Schmutz	173	147	144
Woerner	120	139	122
C. Zeller	94	85	87
Riley	190	179	165
Raynor	101	139	102
Stewart	121	128	95
Butterfield	135	167	163
A. Zeller	187	119	110

At Newport.

On the evening of February 12 five Newport gardeners were defeated by a team of Newport artillery officers. It was a return match, the gardeners having won out in the first contest. Following is the score:

GARDENERS.	1st	2d	3d	T'l
Gardner	113	109	91	313
Stark	99	117	126	342
Smith	107	133	112	352
Doe	73	119	141	327
Patterson	123	107	122	352
Total	515	579	592	1686
Artillerymen	620	607	686	1913

At Chicago.

On Tuesday evening, February 18, several familiar faces were missed from the bowling alleys, owing to their wearers being en route to Indianapolis with them. Following is the score:

ALL STARS	1st	2d	3d	T'l
Chas. Ba luff	141	144	180	465
C. A. Hunt	140	128	119	387
John Degnan	149	148	153	450
Geo. Pieser		112	131	246
Total	430	532	586	1548
WHOLESALERS	1st	2d	3d	T'l
Jos. Foerster	182	149	169	500

Geo. Asmus	144	168	151	466
Total	593	619	659	1871

There is a match game on for the Star alleys next Monday night, E. C. Benthey against P. J. Hauswirth, ten games, total pins to count.

At Jamestown, N. Y.

The bowling club of the employes of the Lakeview Rose Gardens has been permanently organized by the election of the following officers: President, W. N. Coyne; treasurer, M. McCne; secretary, Jas. Lydens; corresponding secretary, Alex. Scott; manager, Jas. Brooks. The management of the firm will give a suitable trophy for competition and it is likely that a bowling alley will be erected at the greenhouses this summer, in conjunction with the clubroom and library At present two teams composed of rose growers and carnation growers are rolling a series of games. The following is the score made February 13:

ROSE GROWERS.

Player	1st	2d	3d	T'l
Wm. Coyne	163	123	116	402
M. McCue	135	112	117	364
C. Gunton	102	152	153	407
Ed. Boyer	114	108	137	359
Jas. Brooks	109	117	89	315
Fred. Connors	123	114	85	322
Carl Carson	86	117	111	314
Total	832	843	808	2483

CARNATION GROWERS.

Player	1st	2d	3d	T'l
J. Doxie	116	90	86	292
J. Lydens	125	141	134	400
C. Hennon	133	102	120	355
J. Eidens	114	114	93	321
A. Scott	129	141	140	410
Wm. Bennett	109	60	79	248
F. Gunton	111	93	149	353
Total	837	741	801	2379

A. S.

At Philadelphia.

The bowlers give the pin boys but little rest these days, as the matinee and evening performances are generally well attended. The associate members are the most constant, having more time at their command. There is a record slate which contains the highest scores of the day, week, month and year, and also the highest single game on record for the alleys and the best triple, or three game totals. No game that does not pass the double century mark finds a place on the board and these are often changed several times a day. William Gibson has been presented by some of his friends, who know his fondness for the game, with a miniature set of ten pins. It is said that "Billy" practices on these at home and as a consequence a new coat of plaster has been found necessary.

On Monday, February 17, the Florists defeated the Century Wheelmen, teams of five, in their regular schedule in the Bowling League tourney. It was a great contest, for the defeated team averaged 538 pins per man and the victors 565. The total of 2824 is very nearly up to the record for this city. The winning puts the Florists well in the lead and practically assures them of the championship.

Four New Carnations for 1902

Sales limited to 25,000 of each variety.
Orders filled in rotation as received and booked.

ALBA

A white never showing any trace of color, largest size and perfect form.

Dorothy Whitney

The best commercial yellow we have ever grown. It gives quantity, of the best form and strong stems all through the season.

Stella

White penciled pink. Comes into flower early and shows a mass of buds and bloom throughout the entire season. This is, undoubtedly, the most satisfactory of all the variegated carnations where large flowers in quantity are wanted at all times.

Apollo

The brightest scarlet in the commercial class. It is much brighter than Crane, of equal size bloom and better stems. Early and very free.

Prices $12.00 per 100; $27.50 per 250; $55 00 per 500; $100 00 per 1000.
250 of each of above four varieties for $100.00.

The Cottage Garden Novelties

J. H. MANLEY, a large early and free scarlet.
VIOLA ALLEN, white edged and splashed rose pink.
HARRY FENN, new Harvard crimson.
VIOLANIA, sport of Bradt with less markings.
PRICE—$12.00 per 100; $27.50 per 250; $55.00 per 500; $100 00 per 1000.

OTHER 1902 NOVELTIES.

GAIETY, (Hill), white striped scarlet.
$10.00 per 100; $75.00 per 1000.
CRESSBROOK, (Warburton), pink.
$10.00 per 100; $75.00 per 1000.
MRS. E. A. NELSON, (Nelson), pink.
$10.00 per 100; $80.00 per 1000.

We can supply good stock of the 1901 introductions—Lorna, Roosevelt, Norway, Golden Beauty, Novelty, Dorothy, Prosperity, Mermaid, Irene and Egypt. Also the good standard varieties—Morning Glory, Lawson, Marquis, Crane, White Cloud, Bradt, Glacier, Maceo, Joost and others.

We ship only the best stock. If you have not already received our price list, send for it at once.

F. Dorner & Sons Co.

La Fayette, Ind.

Buffalo.

BUSINESS SUFFICIENT TO USE UP STOCK.—AZALEAS SELL WELL.—CARNATION CONVENTION VISITORS.

Trade is fair, but the supply of stock is equal to all demands. Carnations are of unusually fine quality and bulbous stock is good. Well flowered azaleas are plentiful and are meeting with ready sale. Since the beginning of Lent there has been the usual decrease in the number of parties and receptions, but otherwise business is about as usual.

Among those going to the Indianapolis carnation meeting were W. F. Kasting and family, J. F. Cowell, W. J. Palmer, D. B. Long and Wm. Scott. C. F. Guenther, of Hamburg, and T. J. Totten and his son, of Saratoga, also joined the party here.

S. B. Smiley, at Lancaster, has made a satisfactory adjustment of his fire loss and will shortly begin rebuilding operations.

Visitors: Paul Berkowitz, Philadelphia; John A. Smith, of the Walter Mott Seed & Bulb Company, Jamestown, N. Y.; Winifred Rolker, New York; A. Zirkmann, with Sigmund Geller, New York, and E. R. Frey, Rochester. W. A.

AMES, IA.—The new laboratory building of the horticultural department, Iowa State College, will be formally opened this (Saturday) evening.

DORRANCETON, PA.—Benjamin Dorrance has given the American Rose Society $50 in plate for a trophy to be given for roses exhibited at the March show, grown outside of a radius of 150 miles of New York. Not less than five varieties are called for and not less than twenty-five of a kind.

EASTER PLANTS

This rare chance to all is open for only a few weeks, so be lively with your orders. The best of all Indica Azaleas, **Mdme. Van Der Cruyssen**, is a very scarce article this season. I was lucky in my purchases in Belgium, and now offer for Easter blooming about 1500 of this variety at special low prices. 5-in. pots, full of buds, nice little plants, 40 cents each; fine specimen plants in 6-in. pots, 75 cents to $1.00 each; 7-in. pots, $1 25 to $1.50 each; extra large specimens in 9, 10 and 11-in. pots, perfect jewels, full of buds, the finest crowns you ever saw at $3.00 to $4.00 each, all last fall's importation.

All other varieties of **Azalea Indica**, 6-in. pots, 50 cents, 60 cents, 75 cents to $1.00 each; 7-in. pots $1 25 each.

Azalea Mollis, fine plants, bushy, 20 to 25 buds, only 35 cents each. Cash with order please

On account of saving express charges, please state whether to ship in pots or without pots.

I carry an immense stock of Easter flowering plants: **Cinerarias** by the thousand; yellow and white **Daisies, Spiraea Floribunda** and **S. Compacta, Hydrangea Otaksa, Begonias, Lilium Harrisii, Tournesol Tulips, Hyacinths, Daffodils, Von Sions.** Watch this advertisement for prices.

Lowell, Mass.

MILD WINTER CAPPED BY BLIZZARD WHICH BURIES GROWERS.—TRADE LAGS AFTER LENT COMES.—PERSONAL DOINGS.

The winter, up to a few days ago, has been what one might call an open one, but at the present time we are having a regular old-fashioned New England blizzard. Some of the greenhouses on the outskirts of the city are completely submerged. Business was fairly good until Lent set in and then it took a drop. A good many violets were disposed of on St. Valentine's day. The demand for violets so far this year has been good, in fact, equal to the supply. Bulbous flowers of all kinds are in and are of good quality. The supply of roses continues to be limited and at times they are not obtainable at any price. For years the florists of Lowell have depended principally on two growers for lily of the valley, one in Connecticut and the other in Rhode Island, but the finest valley ever seen in Lowell now comes from E. N. Pierce & Sons, at Waverley.

McManamon has made a number of improvements at his store and down at Kenwood, where the greenhouses are located, they are very busy getting ready to put up a new 100-foot house and new boiler room.

Frank Sladen, gardener for Geo. W. Fifield, has some fine seedling cyclamens in 7-inch pots, some of which have 500 blooms to a plant.

M. A. Patten, of Tewksbury, left Monday for Indianapolis, to attend the carnation convention.

Otto Bourdy, who has greenhouses on the boulevard, is laid up with a severe cold.

C. L. Marshall has put in fruit, in connection with his flowers. A. M.

Lenox, Mass.

LOCAL HORTICULTTISTS HAVE A RARE PROGRAMME OF ESSAYS AND DISSUSSIONS.

On Saturday evening, February 15, Wm N. Craig, of North Easton, Mass., addressed the Lenox Horticultural Society on "Orchids," a subject of which he is most qualified to treat. The entertainment committee has arranged for the following list of entertainments for the rest of the season: March 1, A. Herrington, of Madison, N. J., subject "The hardy flower garden;" March 15, Farquahar Brothers, of Boston, stereopticon lecture on Russia; April 1, Robert Simpson, of New Jersey, subject "Roses and their culture;" April 15, C. W. Ward, Queens, N. Y., address on "Hybrids."

HARTFORD, CONN.—Son number three arrived at the home of Theodore Wirth, Hartford's genial park superintendent, last week. All's well and the proud parent is just as proud as if it was number one.

C. HUMFELD, Clay Center, Kan.

Pueblo, Col.

TRADE ACTIVE ALL WINTER.—FINE PROSPECTS FOR SPRING.—STOCK SHORT.—NOTES.

Business has been unusually brisk here this winter. There has been scarcely a lull since Thanksgiving, with the largest Christmas trade ever known here. Since January 1 there has been almost constant call for funeral flowers and many small decorations, besides a heavy transient trade in loose flowers. And not having been able at all times to keep up the supply with our home production we have found it difficult to get flowers in Denver or Colorado Springs, showing there is no surplus there. We therefore look for a heavy Easter trade, with perhaps a shortage of stock. Owing to the number of residences and public institutions being built this winter there will no doubt be much extra planting done in the spring, but there will be a large stock of bedding plants to meet the demand.

G. Fleischer is putting up three new houses for carnations and general stock, each 20x65 feet. There is talk of other building operations, but nothing definite at present.

The beet sugar industry is assuming quite large proportions in this vicinity, with prospects of large increase the coming season.

W. P. R.

New Orleans.

GROWERS BUSY PREPARING SPRING STOCK.—NORTHERN WHOLESALERS CALLED ON FOR CUT FLOWER SUPPLIES.

All those who have quantities of bedding and other spring plants have been very busy of late bringing their stock into good shape. Most of it is now ready for the market. The winter has been very cold from the start and all the gardens around the city are without plants, so that we anticipate a very good business.

Mardi Gras is past, and a very good one it was in the flower line. The Chicago wholesale florists must certainly be satisfied with the number of orders received from our retailers lately and, in fact, all winter, for the home production has been very little. The stock received from the northern wholesalers has been very good.

We are now looking for settled, warm, sunny weather and will soon have an abundant supply of outdoor rose buds.

M. M. L.

The GUARDIAN ANGEL FLORIST, Chicago.

PRICE LIST of Rooted Carnation Cuttings.
NEW AND STANDARD VARIETIES.

TRENTON, N. J.

Scranton, Pa.

LOCAL FIRM PUTS UP ONE OF THE BEST DECORATIONS ON RECORD.—OTHER DEALERS REPORT TRADE GOOD.—VARIOUS NOTES OF INTEREST.

The greatest event of the season, by all odds, was the golden wedding anniversary of Hon. and Mrs. William Connell. Marvin & Muir had the decoration in charge and it was one of the most elaborate, artistic and costly pieces of work ever attempted in this section. A huge umbrella of lilies of the valley and Perle roses, the latter predominating, under which the venerable couple received, was suspended from the ceiling at one of the bow-windows. Thousands of lilies of the valley, roses and asparagus fringed the tall pier glasses, mantels and every available nook and corner. Ropes of wild smilax festooned from the chandelier almost hid the ceiling in a green canopy. Yellow ribbon made up in all sorts of rosettes and bows added to the general effect. The Turkish room was decorated in red, with ferns for a background. Poinsettias, both cut and in pots, were used in profusion and with splendid effect. The library presented a study in green, the mahogany paneling being almost hidden behind hundreds of flowers, while the decorations of the dining room were especially elaborate. Asparagus, smilax and palms were used, while the centerpiece on the table was a mass of the finest orchids obtainable, arranged in a way to do credit to the most renowned decorators. Harrisii and palms were used for the staircase, the balustrade being concealed by green roping and wild smilax. The annex erected for the occasion, adjoining and inclosing the Clay avenue porch, was especially attractive. The walls and ceiling were covered over with golden cloth. Over this was woven a veil of smilax and dotted here and there were roses, carnations and chrysanthemums. Myriads of electric lights throughout lent a special charm to the whole effect.

At. T. B. McClintock's things, as usual, are in fine shape. His carnations and roses are exceptionally good. Mr. McClintock intends growing largely the best carnations of recent introduction.

The Scranton Florists' Supply Company has removed to larger quarters where, with increased facilities, they expect to do a large business.

W. H. Davis has remodeled his greenhouses and is growing fine stock in consequence. His carnations this season are all that could be desired.

Geo. R. Clark has no complaints to make. Trade has been brisk all along the line and the outlook promises well.

NOMIS.

ROCKFORD, ILL.—H. W. Buckbee had his left leg broken and one elbow injured in a fall down the elevator shaft in his store February 12. He was sadly missed at Indianapolis by his many friends, but his representative, C. W. Johnson, was on hand with some fine exhibits. Mr. Buckbee is progressing favorably.

30 000 YOUNG ROSES in 2x2½, 2½x3-in. and 3-in. pots. Also Rooted Cuttings. ROSES—Meteors, Brides, Maids, Kaiserins, Perles, Am. Beauties, Liberty, Golden Gate, La France, Belle Siebrecht. We believe in shifting Young Roses All stock offered in 2½-in pots has been shifted from 2-in. and is equal to most stock advertised as 3-in. and when we send it out is well established. The above are now ready to go out and—as we need room—we will make special prices in quantity. Send us a list of what you want and we will give you our figures. Send $1.00 for samples. Write

J. A. BUDLONG, 37 and 39 Randolph St., CHICAGO, ILL.

Providence, R. I.

BUSINESS CONTINUES TO USE UP SUPPLIES IN MOST LINES —PRICES,—VARIOUS NOTES.

Business continues fairly good, and Valentine's trade was particularly satisfactory in cut flowers, although not as good as last season. Nevertheless, the growers seem to keep sold right up, this condition being due probably to a less cut than last year. Carnations bring $1.50 and $2, roses $5 to $8, with violets over-plentiful at from 30 cents to 50 cents per hundred. Tulips and daffodils bring $2 to $3 but hyacinths and narcissi hold fire at anything above $2. Probabilities are in favor of an easy-toned market for Easter, there being no reason to fear an unusual shortage.

At the recent Orion Club concert only three bouquets were handed to the soloists. What can be done to increase the use of flowers at these concerts?

The Shepard Company and the Boston Store still hang on to their flower departments, but it's a good thing they don't need the money.

T. J. Johnston has tiled his show window, and Johnston Brothers contemplate making a change in their display space.

L. Williams is busy building tenements near his greenhouses.

Almy still markets quantities of smilax and azaleas.

Mrs. P. F. Conley is marketing good myosotis.

Mr. Westcott has recovered from the grippe. M. M.

Grand Island, Neb.

TRADE GOOD AND EVERYBODY HAPPY.—GROWERS DOING WELL.

We are having real winter weather here, for four weeks or more, which has kept the coal bin empty. But trade has been good, so we can stand it. Funeral work has been plentiful the last few days, which took a good many flowers. Brewster & Williams have had good success with the stock planted in their new houses last year. They have in 1,500 carnations, all the leading varieties, from which they had picked to February 15 5,400 blooms. The plants were small when housed. In roses they have one house with 1,600 plants, from which they have cut 6,250 buds They will add another house 18x116 this summer, which will give them four of this size besides about 500 feet in hot bed sashes.

ED.

VINCA VARIEGATA Rooted cuttings, well rooted, $1 per 100; $7.50 per 1000.

FORGET-ME-NOT, true winter flowering, out of 2½-in. pots, $2.00 per 100; $15.00 per 1000.

Columbus, O.

DUTCH BULB DRUMMERS FIND THEIR STOCK DOING WELL.—TRADE EXCELLENT.—VARIOUS DOINGS.

H. Van Teylingen, of Van Zanten & Company, and Wm. Van Lewen, of Beerhorst & Van Lewen, were the first arrivals in Columbus representing Holland bulb growers. They were able to quote lower prices on hyacinths this season, compared with 1901, but tulips of most standard varieties have advanced. The Dutch stock imported last summer and now in bloom is of better quality than has been seen for years. It has been a great help since roses are so very scarce. However, the roses are doing much better of late, and a good crop is expected for Easter. The largest Valentine's day trade ever known was experienced this season. All kinds of flowers were in demand, with violets taking the lead.

The Underwood Brothers have had a good opportunity to test their new heating system, consisting of two large boilers placed on the level, doing away with gravity and using in its stead a device automatically pumping the condensed steam into the boilers, causing the return pipe to be as free as the flow pipe from condensed steam. The stock on this place looks fine, with the exception of Bermuda lilies, which, like those of most growers, are very discouraging.

Affleck Bros., who have been doing a strictly wholesale business, have decided to establish a retail trade, depending on that wonderful telephone to bring in orders.

Maurice Evans & Son are again to the front with a fine lot of verbenas. They are equal to the finest strain in the country. CARL.

Washington, D. C.

Z. D. Blackistone has his window decorated for the meeting of the Daughters of the American Revolution, the main feature being a large wheel with thirteen spokes and thirteen stars, representing the original states.

Chris. Schellhorn has been cutting a number of fine roses, such as Meteor, Liberty, Bridesmaid, Bride and Golden Gate.

Although Lent has begun there are still some dinners and receptions going on. P. G.

WESTERLY, R. I.—W. W. Foster is about to erect a range of four houses here for carnation growing. Mr. Foster is a brother-in-law of S. S. Pennock, the Philadelphia wholesaler.

San Francisco.

BUSINESS CONTINUES VERY SATISFACTORY. —GOOD CARNATIONS IN GREAT DEMAND.— A GOOD GROWER.—NEW STORE.

Business for the last week continues to be of the best and stock, especially in the line of carnations, is exceedingly short. All fancy carnations are bringing $1 per dozen. The best Lawson fetch 75 cents, and 50 cents is the price for all standard varieties except Scott, Portia and Hill, which bring only 35 cents per dozen. Tulips are coming in more freely and bring from 25 cents to 75 cents per dozen. Roses are of very good quality and prices are fair.

A trip to Alameda, to Galloway's, always proves delightful, as this place is known for its excellent stock of carnations. There are only two houses, 30x150, on this place, but a good many more dollars are made here than on many places double the size. They intend to add another large house this summer, also for carnations.

Antonini & Lyon is a new firm at 211 Sutter street. Mr. Antonini was formerly a partner at 205 Sutter street, Canepi & Fagoni having bought his share. Mr. Lyon bought out Mrs. Labhard on Kearny street and then opened the store on Sutter street.

Alex. Mann, Jr., the Polk street florist, is receiving the congratulations of his friends, a baby girl having arrived at his home this week. GOLDEN GATE.

Louisville, Ky.

The florists of Louisville have concluded to take a hand in the matter of a Coliseum for the city, and have written a letter to the Commercial Club committee, strongly advocating the erection of such a building. The florists desire such a structure for a flower show and musical festival annually, and have appointed a committee to confer with the other Coliseum committees. The committee of florists consists of Messrs. Henry Nanz, E. G. Reimers, J. E. Marret, F. Walker, Charles Reimers and Jacob Schulz.

SOUTH BEND, IND.—The South Bend Floral Company, recently incorporated, will make a specialty of carnations for the wholesale market.

BALTIMORE, MD.—It has been decided to hold the annual banquet of the Gardeners' Club on March 10. John N. May, of Summit, N. J.; John Burton, president of the Society of American Florists; Robert Craig, of Philadelphia, and Alex. Scott, of Philadelphia, will be the invited guests.

CANNAS Burbank, Henderson, Mme. Crozy, F. Vaughan, P. Marquant, L. E. Bally, A. Bouvier, J. C. Vaughan, Ezandale, Souv. de Antoine Crozy, in variety, started, $2.50 per 100.

ALTERNANTHERAS P. Major, red, R. C., 60c, postpaid. Pot plants, red, yellow, pink, $2 00 per 100.

BOSTON FERN 2½-inch, 3c; 3-inch, 8c; 8-inch, $1.00.

Wittboldii, strong, 4-in., 25c; 5-in., 50c; 6-in., 75c. large bench plants for 10-in. pots, $1.00.

Minneapolis.

TRADE VERY ACTIVE BUT LENT LIKELY TO MAKE SOME IMPRESSION.—VARIOUS NOTES.

Last week's business was exceedingly good and there were a large number of decorations, which made the call for greens heavy. But Lent's arrival will quiet this somewhat. Tea roses, especially Meteors and Liberties, have been a shortage for the last month and the dark weather does not hasten them any. Bridesmaids and Brides are not overly plentiful, but just about meet demands. Beauties, too, are scarce and in order to secure them early orders have to be placed. Daffodils, Romans and Paper Whites are in goodly supply, but the call uses them up nicely. Valentine's day made violets the popular flower, but from reports the trade was not what was expected and prepared for.

Hans Rosachen, formerally of the East Side Floral Co., has purchased a small tract of land on the East Side and will erect a range in the spring.

Rice Brothers report good business the last week but not as rushing as the preceeding one, mostly because of the shortage of roses.

Frank Kindler, of St. Cloud, has been spending the week in the Twin Cities on business, and calling on the trade in general.

Lily of the valley is very fine but does not realize more than $3 per hundred.

C. F. R.

Omaha.

BUSINESS STEADILY BRISK.—GOOD STOCK PLENTIFUL.—BOWLERS PLAN A PICNIC.

Business has been good and steady and prices have kept up well. Never before were so many parties and teas as this season and the purchasers are more free in buying than in former years. Stock never was better than this season and, in fact, poor stock cannot be found. Some growers cut their buds too close, which will make them poor. Potted plants are selling well, azaleas especially, and well grown cinerarias. Cyclamens are not moving as well, although the plants are up to former years. Bulbous stock sells well, better than ever. Valentine's day is getting to be a Christmas on a small scale. Violets, American Beauties and carnations are the favored flowers for valentines, with a few flowering plants.

February 9 the Nebraska Florists' Society held its monthly meeting and February 27 was set as the date for a florists' bowling picnic. The "Southsiders" will play the "Northsiders" for a cash prize and after the bowling there will be a supper.

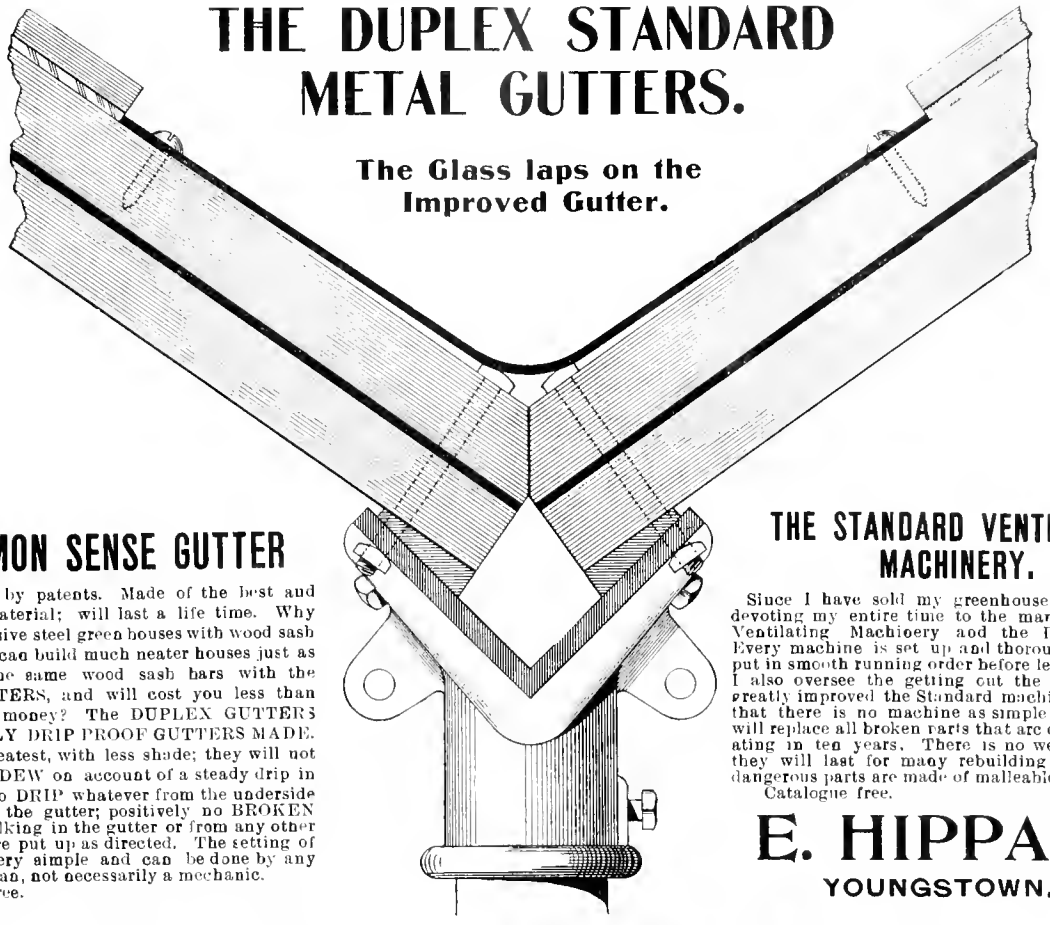
Moller's Deutsche Gartner Zeitung is published weekly and richly illustrated. Subscription $3.00 per annum, including postage. Sample copies free.
LUDWIG MOLLER, ERFURT Germany

THE DUPLEX STANDARD METAL GUTTERS.

The Glass laps on the Improved Gutter.



A COMMON SENSE GUTTER

fully protected by patents. Made of the best and most durable material; will last a life time. Why build the expensive steel green houses with wood sash bars, when you can build much neater houses just as durable with the same wood sash bars with the DUPLEX GUTTERS, and will cost you less than one-fourth the money? The DUPLEX GUTTERS ARE THE ONLY DRIP PROOF GUTTERS MADE. They are the neatest, with less shade; they will not cause any MILDEW on account of a steady drip in cold weather; no DRIP whatever from the underside or any part of the gutter; positively no BROKEN GLASS from walking in the gutter or from any other cause if they are put up as directed. The setting of the gutter is very simple and can be done by any ordinary workman, not necessarily a mechanic.
Catalogue free.

THE STANDARD VENTILATING MACHINERY.

Since I have sold my greenhouse business, I am devoting my entire time to the manufacture of the Ventilating Machinery and the Duplex Gutters. Every machine is set up and thoroughly tested and put in smooth running order before leaving the shop. I also oversee the getting out the gutters. I have greatly improved the Standard machine and am sure that there is no machine as simple and durable. I will replace all broken parts that are caused by operating in ten years. There is no wear out to them; they will last for many rebuilding of houses. All dangerous parts are made of malleable iron and steel.
Catalogue free.

STOCK SCARCE BECAUSE OF LONG CONTINUED COLD WEATHER.—TRADE MATTERS HERE AND THERE.

The retailers have been trying for several weeks to solve the problem of how to run a store and fill all orders when the frost has reduced the supply of flowers to almost nothing. Since the middle of December stock has been in very short supply, not nearly enough to meet the demand. However, this condition will not last longer than after a warm rain, when flowers will be abundant.

The management of the extensive carnation fields and all the grounds used for the production of cut flowers by the Redondo Floral Co., at Redondo Beach, has been placed in the hands of an experienced grower who comes highly recommended from one of the eastern states.

Capt. Melville Walker, the wholesale grower of cut flowers, and Morris Goldenson, the Spring street florist, are on a business trip to San Francisco. They traveled north by ocean steamer.

Reports from some of the foremen in the city parks state the park vegetation suffered more from frost on the morning of February 6 than at any other time within a dozen years.

The sympathy of all florists and gardeners is extended to Mr. and Mrs. John F. Morley, whose only son, a bright boy of seven years, died as the result of hip disease. D. R. W.

St. Paul.

LENT PRODUCES SLIGHT EFFECT ON TRADE.—STOCK NOT OVER-PLENTIFUL AND SELLING WELL.—COAL FAMINE AVERTED.—VISITORS.

Although Lent commenced ten days ago trade has not received any perceptible check and flowers are still in good demand. Weather conditions have been ideal, so there has been a good cut, both in quantity and quality. Carnations are more plentiful than they were a few weeks since, but good roses are comparatively scarce. Bulbous stock is quite abundant but has sold very well.

There has been a threatened soft coal famine, but this has been happily averted, though growers who were not fortunate enough to contract in advance have paid fancy prices.

The travelers are becoming numerous. Recent visitors were Mr. Keur, Hillegom; Mr. Ward, representing Hagemann & Meyer; C. W. Scott, of Vaughan's Seed Store, and the rotund "Joe" Rolker.

FELIX.

NEWBURG, N. Y.—Jos. Harrison, treasurer of the Chadborn Manufacturing Company, and Mrs. Harrison are en route to Florida for a month's outing.

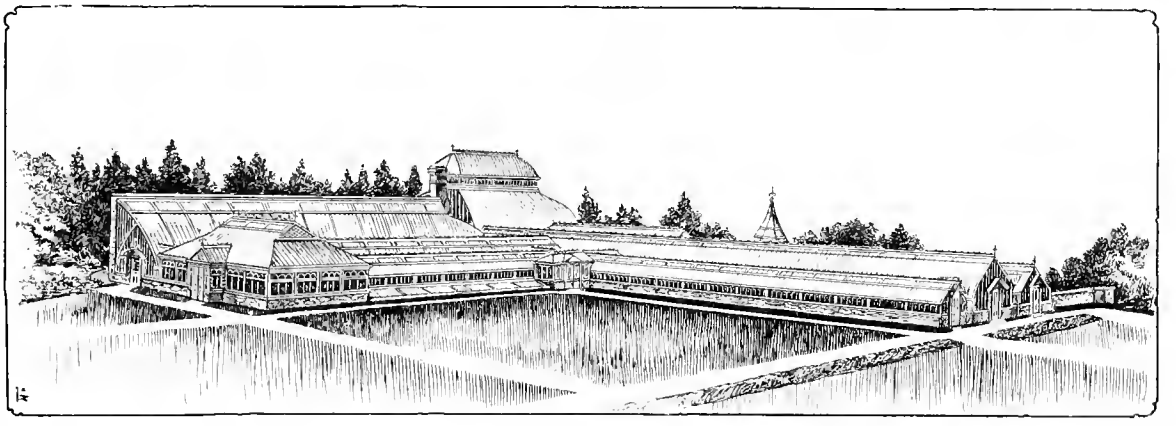
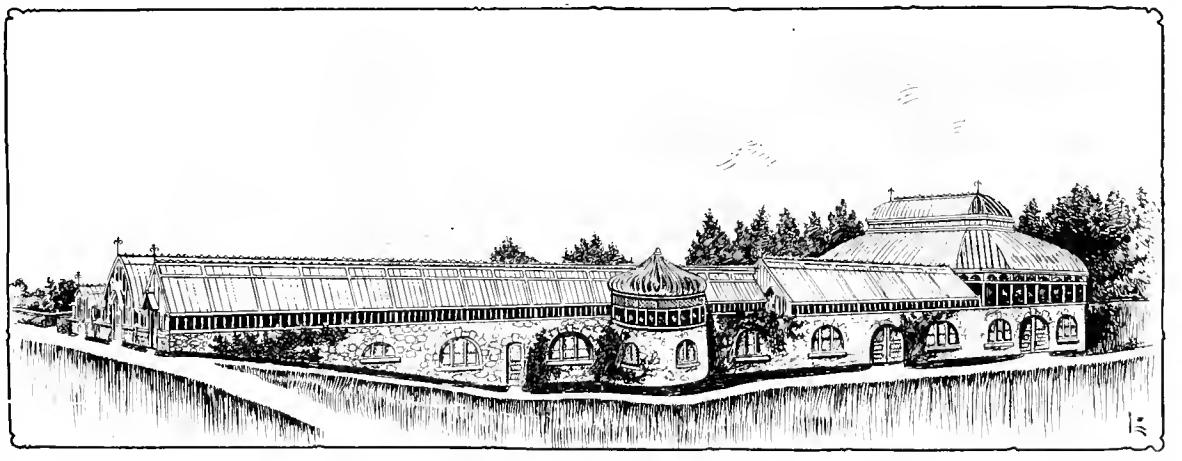
RENDLE'S
Greenhouse Construction



NOW BEING ERECTED FOR HOWARD GOULD, ESQ., SANDS POINT, L. I.

THE above cut represents a prespective view of the range of Conservatories and Greenhouses now being erected by me for HOWARD GOULD, Esq., at Sands Point, Long Island, which will cover over 20,000 square feet of ground and is probably the largest private range of greenhouses in the country. **All the greenhouses are absolutely fireproof,** no wood at all being used except for the doors. The roof, sides and ends are to be glazed on the "Paradigm" System of Glass Roofing, an illustrated catalogue of 40 pages descriptive of same sent free on application.



SOUTHEAST VIEW OF ABOVE RANGE.

Horticultural Buildings of every description erected.

JOYS BUY THE CURREY PLANT FROM THE TRUSTEE IN BANKRUPTCY.—TRADE CONTINUES GOOD.—VARIOUS NOTES.

For the past month the trustee, A. W. Akers, has been engaged in closing out the stock in bankruptcy of Currey & Co. A large number of plants were sold to private parties but the bulk of the stock and the entire plant, comprising over an acre of glass with the contents of the greenhouses and the lots upon which they were built, were closed out to the Joy & Son Co. The old and well known firm of Currey & Company was the pioneer in the business here, having been established in 1875. It now passes out of existence. Joy & Son will for the present run the plant, at least until after Easter, and will then determine what they will do in the future.

The severe weather and heavy snows for the past few weeks have had the effect of shortening stock on roses and violets. Dealers had very good sales on Valentine's day, but were short on violets. The Lenten season has very little effect upon the flower trade, as a rule, in this city, for while there are no great occasions or very large call for flowers, there is a steady small demand.

Some very fine carnations are coming in now, and Geny Brothers are showing a very fine white, large in size and perfect in form.

It is rumored that a well known department store will shortly open a cut flower department. M. C. DORRIS.

RACINE, WIS.—The city is going into the florist business, erecting a greenhouse in the cemetery. It is not at present contemplated to sell plants to lot owners, only to avoid buying them for the cemetery beds.

WAYNESBORO, PA.—Henry Eichholz will vacate the old Witterhouse greenhouses, built in 1891, on October 1, and will remove this summer to his new place, purchased two years ago, eight modern structures, one 31x150, one 12x150 and six 10x60. The place is beautifully located, overlooking the Cumberland valley, with the Blue Mountain chain as a background. Geraniums and novelties in carnations, roses and chrysanthemums will, as heretofore, be the stock grown.

Seasonable Plant Notes.

Lack of space is a common complaint at this season of the year from the fact that the Easter stock is occupying a great deal of room in the majority of florists' places and, this crop being one of the most important of the year, it does not pay to skimp it. As the taste of the plant buying public advances, the demand is for better and still better stock, and in order to meet this demand space must be had at the right time for the best development of the plants.

It has been often noted that plant prices do not seem to advance in proportion with the advance in quality of the stock produced by the leading growers, and there is doubtless much truth in such a statement, but nevertheless the grower of good stock has a much better chance in the market during a dull period than the producer of low grade plants. The higher grades of cut flowers bring better prices than the average cut, and it would seem only reasonable that the same rule should apply to the plant trade. It may be remembered, however, that we cannot yet import cut flowers as readily as this is done with many lines of plants, and, to that extent, at least, the grower of cut flowers has some advantage over his brother who handles plants only.

HENRY DAILLEDOUZE.

Vice-President American Carnation Society.

But to return to the work of the season, we find that the present time is one of the best of the year for the propagation of many plants, and during this month the propagating beds should not be idle, even though one has to build shelves in order to find accommodation for the product of the propagating beds. Many foliage plants root very readily at this time, among these being crotons, acalyphas, dracænas, ficuses and others, the process of rooting progressing very rapidly during the period when we have steady bottom heat and not too strong sunshine. Of course the cutting beds or frames are likely to dry out much more rapidly with the strong firing that is so frequently required in midwinter, but this only necessitates a little more watchfulness on the part of the operator, and should be attended to just as soon as the house warms up in the morning, or at about 9 a. m.

The chief secret in the successful rooting of cuttings is to maintain moisture enough to keep the cuttings plump and stiff without getting the rooting medium so wet as to encourage the decay of the cuttings and at the same time to give sufficient ventilation to keep the air pure and sweet and thus to avoid the spread of fungus. Pure, fresh air is one of the best disinfectants known, and if one can keep up a sufficient supply of this cheapest of remedies there will be but little to fear from wandering bacteria.

Some growers find a little difficulty with cuttings of the variegated acalyphas damping off, but this is perhaps due to some extent to using cuttings that are rather too hard, the better method being to bring the stock plants into the warmest greenhouse at about the holidays, giving them a shift if the plants are starved, and they will then start freely in a very short time, producing an abundance of short and soft young shoots that form the very best material for cuttings. These cuttings will root rapidly in a night temperature of 65° to 70° and will also grow on rapidly into useful stock when kept under similar conditions and given plenty of light and moisture, for it should be borne in mind that acalyphas are naturally tropical subjects.

It will be remembered by propagators that the soft young tip of the common

verbena will root in about three days, while a hard shoot from the same plant may take two weeks in the rooting process, and much the same rule applies to the variegated acalyphas, except that the latter plant usually occupies ten to twelve days in rooting anyway.

Another notable example of the value of selection in attempting the propagation of plants that are a little "miffy" about rooting is found in the case of that very pretty greenhouse shrub, Coprosma Baueri variegata, a plant that roots with reasonable facility when the cuttings are very young and soft. For example, the short side growths from a plant that has been brought into heat, while hard cuttings will almost invariably damp off promptly, or else absolutely refuse to form roots. The same rule will apply to a much more common subject, namely, Lippia (Aloysia) citriodora, the lemon verbena, a plant that roots very readily from soft cuttings, but hesitates decidedly if the wood be hard.

It is also a wise plan never to allow cuttings to remain in the sand or whatever medium may be used on the propagating bench after they are fairly rooted, for but little nourishment can be had from such a source, and the young plant may get stunted by such treatment, besides the loss of time in filling up the space with a new lot of cuttings.

The rooted cutting business has grown to large proportions with many growers, but at the prices quoted for much of this stock it certainly would not pay to occupy bench room with it after the cuttings were once rooted, and in consequence the crop is moved off rapidly and a new lot follows just as soon as they can be put in.

Plants that may be used in filling vases and window boxes form no small item in the stock of many florists, for not only considerable variety is admissable in such cases, but also a considerable quantity, for in both vases and boxes for the window or porch it is a prime requirement that an immediate effect be produced, the customer naturally objecting to having to wait "while it grows." The window box, if well filled, is perhaps more satisfactory than some of the vases, and especially those made of metal, for while the latter may be unique in design and perhaps artistic in outline, yet they do not provide ideal conditions for plant growing, unless it may be for the growth of century plants or Arizona cacti.

But the window box is more often made of wood and, being square sided, provides more root room for the plants therein, and in addition to this does not bake the roots so rapidly. Some of our large hotels and apartment houses use up quite a goodly quantity of plants in this kind of decoration, the winter filling of the boxes being managed with hardy evergreens, and as soon as the weather permits the evergreens are removed and their places occupied with spring flowers, hyacinths, daffodils, pansies and the like, and these in turn giving place to summer flowers, vines and foliage, the material used depending largely on the taste of the decorator and the location and exposure of the building.

W. H. TAPLIN.

PARKERVILLE, PA.—William Booth will close out his business and on March 1 return to his former home at Trenton, N. J.

NEW CASTLE, IND.—L. A. Jennings is making arrangements to replace his present range of greenhouses with new and thoroughly modern structures.

The Sweet Pea and Its Failings.

As Mr. Hutchins intimates, in his article on sweet pea troubles, issue of February 5, page 37, that he is more liberal—has learned to say agnosco in many cases now where formerly he believed he had absolute knowledge in matters of theology—he will pardon me if I suggest that honest seekers after truth should be equally humble in opinions as to undiscovered laws of nature. I think, however, that the vast majority of the readers of the AMERICAN FLORIST will agree with me that it has been demonstrated that the failure with sweet peas in certain sections has had nothing whatever to do with the locality in which the seed was raised. In fact, if I recollect rightly, Mr. Hutchins himself admitted as much the last time we had the pleasure of a visit from him at Fordhook. If Mr. Hutchins were right in the supposition

SWEET PEAS AT VICTORIA, B. C.

that the sweet pea had deteriorated by being grown in large areas for seed he certainly should be able to bring forth some evidence that in the same place where the regular brands of commercial seed failed there is success from Eckford-grown seed, which gave such admirable satisfaction a few years ago and which is produced of the same grade, in the same place and under the same expert culture as it was formerly. This to my mind is a complete answer to the whole question as to the trouble being with the seed.

I must entirely differ with Mr. Hutchins in his statement that "We have been developing it right away from this primitive quality." We have been doing no such thing. The fact is, as every seed grower will tell you, the quality and vitality of seed is much better in seasons of full crops than when the seed is small.

Compare the vitality of Long Island grown cabbage seed, crop of 1901, with the vitality of seed produced on a year when the crops are large. Consequently growing sweet peas in sections where they bloom most profusely and seed freely must tend to strengthen their vigor rather than to weaken it. As a matter of fact, American dealers are annually exporting increased quantities of sweet pea seed to the most critical houses in England. Several of these orders come from houses who admit plainly in placing same that they could get English-grown seed for less money but they prefer our American-grown seed. If I were at liberty to mention the names of several of these firms, even Mr. Hutchins would recognize the fact that they knew as much about the general seed business and were as anxious to please their customers with first-class seeds as can be Henry Eckford himself. Further than this we have repeatedly sold seed of our new race of Cupids to Henry Eckford direct. Anyone upon consulting his catalogue will see how enthusiastically he speaks of the dwarf Cupids and of their wonderful freedom of bloom.

Notwithstanding that there have been other sections where the extreme dry weather, aphis, or other causes have contributed to the failure of sweet peas for several years, as has been the case around Springfield, Mass., yet our demand for seed has shown a steady increase and we receive constantly most enthusiastic letters as to the grand success of our customers, both amateurs and florists. Frequently these customers mail us photographs of their vines. I send with this article a photograph (reproduced herewith) which has just arrived from Jas. A. Bland, of Victoria, British Columbia, which he writes us was taken on September 17. You will see by this photo that the sweet pea vines are at least ten feet high. Furthermore, I can honestly say that not even at Henry Eckford's own grounds in Shropshire have I ever seen better sweet peas, nor in fact as strong a growth of vine, as I had the pleasure of seeing last August in my native province of New Brunswick and in Nova Scotia. The vines for almost their entire length of seven to ten feet were covered with bloom of brilliant colors and immense size. In fact I felt quite proud when in the majority of cases I was told by my friends that they were grown from Burpee's seeds, either obtained direct from Philadelphia or through local merchants. Last July our Mr. Earl visited Buffalo at the time of the sweet pea exhibit at the Pan-American and he states that the flowers which composed our exhibit and the other flowers shown there were magnificent—of as high a standard as he had ever seen in Springfield. The flowers for our exhibit were grown by R. E. Boettger, of Eggertsville, N. Y. If Mr. Hutchins would write either to Mr. Boettger or to the sweet pea enthusiasts in the vicinity of Avoca, N. Y., they would gladly tell him doubtless of the complete success they had with the "regular commercial seeds" supplied by American seedsmen.

The suggested theory of having different sweet pea stocks localized in different states as a remedy for failures in certain sections seems to me, with all due deference to Mr Hutchins, simply ridiculous. It is a known fact that Mr. Eckford's novelties the year they are sent out give comparatively a weak growth of vines and sometimes fail to germinate satisfactorily. The seed grown in America, either along the Atlantic or Pacific coasts, shows stronger vitality and a much greater vigor in growth. The use of planting such a grand new variety as Miss Willmott was amply demonstrated by the blooms exhibited by Mr. Larrowe of Cohocton, N. Y., at the Pan-American.

I regret extremely that Mr. Hutchins has become "side-tracked" on the unten-

able theory to which he now seems to cling. I am quite sure that with his keen power of observation if he would only devote his energies in trying to find what is the trouble with local conditions where sweet peas fail we all might hope for some solution of this annoying problem.

W. ATLEE BURPEE.

In regard to the localization of the sweet pea, as advocated by Mr. Hutchins, I would say that I do not think the facts show that the cause of the failure of the plants is in the seed. Crossing may have done something to weaken and high cultivation, to secure size of flower and length of stem, more; but the sweet pea still has vitality enough to stand any rational treatment. I am inclined to assign the cause of failure to the use of too much and too strong fertilizers in the ground, to too close planting and too much water in the earlier stages of growth. And it also seems to me that there should be a rigid investigation for some insect or fungus disease that is at work.

As near as I can learn, whatever the cause is, it is gradually enlarging its area. I must confess that I can see no decrease in the vitality or root growth on my own grounds, either in my own seed or in Eckford's or California stocks. There has always been the necessity to plant the Eckford's in frames to germinate, but after once started they would make a good growth. One thing I have noticed is that where my plantings are thinnest the vitality is the greatest, and frequently they will produce bloom after a full crop of seed has been picked.

The question, it seems to me, is for sweet pea lovers to be contented with a little less size of flower and length of stem, to avoid forcing too much in the early growth, depend more on mulch and less on water.

There is just one thing more that I cannot agree with and that is planting on a south exposure, where they will get the full sun all day. My own experience, even in this cooler climate, is that shade during the hottest part of the day always gives larger and more robust vines, with increased length of stem and size of flowers. I am not fully satisfied that the use of wire as a support does not have something to do with the matter.

If I were so situated I should certainly carry on some experiments to see if there are not local conditions which cause the failures. In the meantime, let those who have done anything in the line of growing and sowing their own seeds report their results, and also let those who make a success as well as those who fail compare notes and see if the cause cannot be ferreted out.

I believe it is universally admitted that where a plant grows to the greatest perfection there is the place to grow the seed.

CARNATIONS IN DECORATIVE WORK.
(From a photograph supplied by C. W. Ward).

CARNATIONS.

NEW VARIETIES AT INDIANAPOLIS.

There was much of interest to the carnation grower in the new varieties staged at Indianapolis. Practically all of the new sorts were shown and there was ample opportunity for the comparison of the novelties with the best of the older varieties. Among the season's novelties and undisseminated sorts, I noted the following:

John Hartje, of Indianapolis, showed four seedlings under number. No. 1431 is a well formed flower, deeper in color than Mrs. Lawson, of good size and with good stem. No. 1453 is a striking white, above the average in size and well built up in the center. No. 1420 is also a very good white and No. 1421 is a good pink, after the style and color of Ethel Crocker.

E. A. Nelson, of Indianapolis, showed the widely heralded pink seedling named after his wife and it was closely scrutinized by every grower present. A few plants of it have been tried by many of the best growers throughout the country and with uniformly good results. The flowers on exhibition seemed to merit the good opinions expressed.

R. Witterstaetter, of Cincinnati, exhibited Enquirer in extra fine shape and coming well up to the best vase on exhibition. From the same exhibitor there was a promising white marked No. 723 A.

L. E. Marquisee, of Syracuse, staged his new white, Empire State, a handsome flower of great size, with good stiff stem, excellent form and clear color.

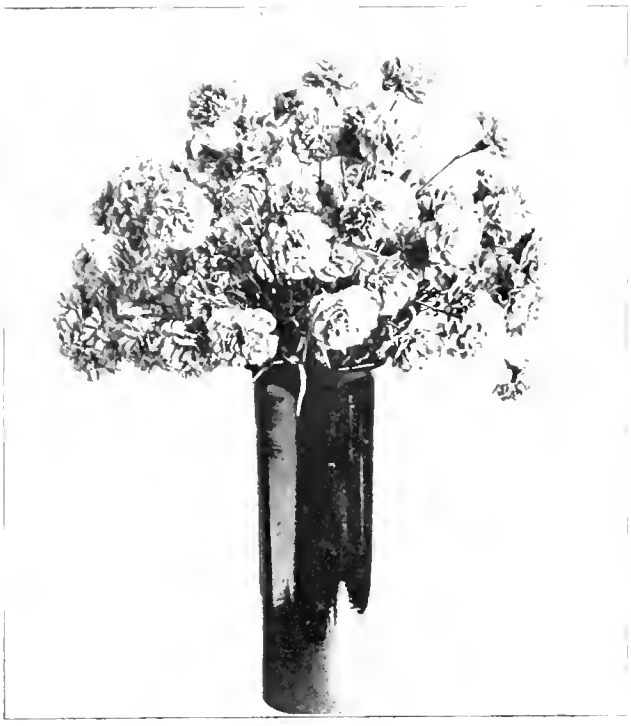
C. Warburton, of Fall River, Mass., showed Cressbrook in fine shape, giving much promise as a useful variety. It is deep pink in color and has a fine stem.

The E. G. Hill Company, of Richmond, had without doubt the best vase of blooms on exhibition, in Adonis, the winner of the Lawson and S. A. F. medals. The color is a bright scarlet, not seen in any other carnation, the size is large and the stem long and strong. They also showed Gaiety, a flower after the style of Mrs. Bradt, equally large, but the variegation is more decided, giving it a striking effect.

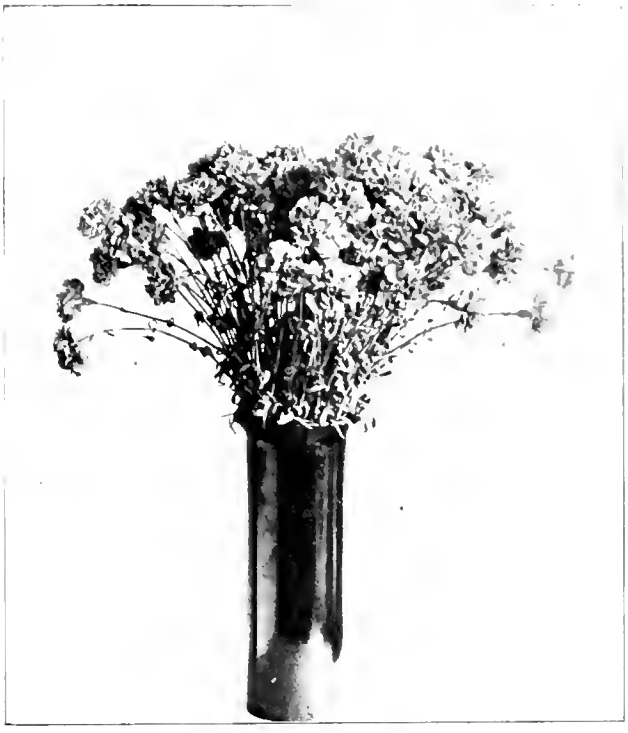
Peter Fisher's exhibits were delayed on the way from Ellis, Mass., but his Gov. Wolcott still showed up in fine shape and had many admirers. It may be described as a white Mrs. Lawson, size and stems fully up to that variety. His Enchantress is a beautiful, even Daybreak pink, pronounced by many the best of its color in sight. It has good stem, excellent size and fine form. Mr. Fisher also showed Mrs. M. A. Patten, a seedling after the Mrs. Bradt style, but the markings are not so prominent. It has the requisites of size, form and stem.

Emil Buettner, of Park Ridge, Ill., brought No. 99, a seedling deeper in color than Daybreak, well up in size, on stiff stems and showing good form.

G. M. Naumann, of Cleveland, staged



WITTERSTAETTER'S ENQUIRER.



BASSETT & WASHBURN'S MRS. LAWSON

PRIZE-WINNING VASES OF CARNATIONS AT THE INDIANAPOLIS EXHIBITION.

Louise Naumann, a pink after the style of Wm. Scott, but not up to present day requirements.

J. B. Goetz, of Saginaw, Mich., showed Oriole, a good scarlet as regards color, but not large enough to warrant the statement that it is an advance over existing varieties.

Boehringer Bros., of Bay City, Mich., brought Daybreak Perfection, so far as flower goes, an improvement over that variety, but a little soft.

E. T. Grave, of Richmond, Ind., showed Camælliaflora, a white showing up in every respect to good advantage in comparison with other sorts on exhibition. If other growers can do this sort as well as it is grown by the originator, it should prove a winner.

F. Dorner & Sons Company, of Lafayette, Ind., had a fine display of seedlings and also showed their novelties for this season. Dorothy Whitney is a fine yellow, Alba a grand large white, and Stella a variegated sort after the style of Mrs. Bradt, with large size and good stem. But the best of them all seems to be Apollo, a very promising scarlet.

The Chicago Carnation Company, of Joliet, Ill., staged their novelties for this season, together with No. 101, a fine, well formed white after the style of White Cloud, but a big advance on that variety. They also showed the famous crimson, Harlowarden, which will be heard from later. Mrs. Higinbotham and Mrs. Potter Palmer are very well known and as staged gained many admirers.

Baur & Smith, of Indianapolis, put up a fine display of seedlings.

C. W. JOHNSON.

THE IDEAL CARNATION.

In his response to the toast "Carnations of the Future" at the banquet at Indianapolis, L. E. Marquisee said in part:

What is the ideal carnation, the carnation of the future? First, it must be healthy, strong and vigorous. This goes without saying and needs no argument. We want no weaklings, no varieties of deficient vitality, for they cannot produce the resutes we require. Second, it must have the "upright habit," as it is called, producing only flowering shoots and no surplus grass. "Grassy" carnations, producing unnecessary foliage instead of and at the expense of flowers are back numbers. Our bench room is too valuable to tolerate such stuff.

The carnation of the future must therefore be free. It must also be early and continuous. We cannot afford to wait till the season is half over before obtaining our results. "Croppers" are to be discarded. By the way, we need a good white now to flower by the first or middle of September to fill the gap between the time asters are gone and the present white carnations come into flower. Who will produce it?

The carnation of the future must have strong stems, not necessarily as stiff as a poker, holding the flower at the top like a wad of cotton on a stick. A slight droop, just enough for grace, is not only not objectionable, but desirable. Stems eighteen to twenty-four inches long are sufficient for all practical commercial purposes. Stems three feet long are especially adapted for exhibition purposes.

The carnation of the future must have size. The little buttons of former days will no longer answer. Three to three and a half inches make a good average commercial size. The general utility of carnations much larger than this might be questioned.

The color must be pure of its shade, if white, a pure white; if pink, a true pink, whether light, medium or dark, unmixed with the purplish or magenta shades. In scarlet it must be a rich, deep, intense scarlet. At present Adonis will answer.

The form must be beautiful and shapely and while not so regular as to suggest the idea of stiffness it must be sufficiently so to represent the characteristic circular form. It must be fine petaled rather than coarse, many petaled rather than few, well built up in the center rather than flat, serrated, though not too deeply, rather than plain. It must have substance and be a good keeper and shipper.

It must be fragrant. A beautiful carnation without fragrance is like a landscape without sunlight, music without expression, oratory without feeling, a beautiful face with no soul behind it.

ROOTING CARNATION CUTTINGS.

ED. AM. FLORIST:—In the past we have bought our carnation cuttings, but we would like to try rooting our own stock. Will you please to tell us how to proceed. A. P. C.

Select cuttings from good healthy plants such as are producing good flowers and take them from the base of the flowering branch. They can be either cut or pulled, the only important part being to have good wood, that is, one or two joints below the tip of the cutting, so that it is hard enough to stand handling. Pull a few of the lower leaves off the cutting or rather pinch them off, as the cuttings should not be barked or skinned in any manner. They will root equally well if cut off clean at the bottom or left just as they are taken from the plant. Use any good, clean sand that will root other stock and keep them carefully shaded and syringed until they have started to root; then they can be gradually given light and air in abundance. The shading can be any material handy that will keep out the sun and keep off all currents of air from the young cuttings. I find a medium grade of muslin the best shading and easiest managed if nailed on lath so that it can be rolled up easily. Syringe in the morning and if very hot the shading can be syringed once during the day. Keep the sand

PETERSON'S ESTELLE.

PRIZE-WINNING VASES OF CARNATIONS AT THE INDIANAPOLIS EXHIBITION.

from 45° to 50° and the top temperature about the same; 45° is the best, although it takes a little longer to get them rooted. As soon us well rooted, pot or plant them. ALBERT M. HERR.

ROSES.

ABOUT BEDDING ROSES.

ED. AM. FLORIST:—Which varieties of the hybrid tea roses give the greatest amount of bloom when bedded outside, and what would be the fair average life of the plants when they must be taken up in the fall and stored in a cool cellar during winter? F. C. C.

Kaiserin Augusta Victoria, Balduin, Robert Scott, Gruss an Teplitz, Souvenir du President Carnot and La France are probably the best of the hybrid tea class for summer blooming in the open ground. As to the average life of roses when they have to be lifted in the fall and stored in a cool cellar, unless they are better cared for than is general under such circumstances, about one year will be the average life of them. Instead of placing them in a cool cellar for the winter lift them carefully in the fall and heel into a cold frame made of rough boards, sunken eighteen to twenty-four inches in the ground, and when the plants are all replanted in the frame fill the balance of the space above the tops with dry leaves to the level of the ground. Over this, as soon as cold weather sets in, shelter should be placed to keep off snow and rains. As soon as the weather will permit the removal of the covering in the spring, gradually expose the plants to sun and air for two or three weeks, in which time they will make new roots and be ready to start into active growth as soon as planted in their summer quarters. I have seen not only hybrid teas but teas carried over very successfully for several years with not over five per cent loss with above treatment. JOHN N. MAY.

GRAFTING ON MANETTI.

Most of the growers have commenced their grafting by this time, but those who have not should not delay. A few suggestions at this time might prove valuable to some of our fellow rose growers.

All of the Manetti stocks should be potted up by this time. I should advise anyone who has any grafting to do to pot all the Manetti stocks before grafting and not to graft before they have started a little. I generally begin by picking out those which have the eyes just starting to swell, and in this way those which start slowly will be left until the last and will have had time enough to develop a flow of sap.

I think the best plan is to set the stocks under the bench in some cool house, say a carnation house, for instance, one where the temperature is below 50°. Leave them there until you see the eyes swelling, and then use only those that have started. I think by starting them slowly in this way it gives the best results, as they form new roots, which will be their main dependence when they are called upon for a sudden flow of sap, which must not cease after they are first united with the scion.

In starting them in this way there is less chance for the Manetti to remain dormant for even a little time after it is united with the scion, which is growing. If the scion is placed on a Manetti stock which does not have a flow of sap from the very first, you will either lose the graft altogether or it will be liable to make a weak plant, one which will not unite firmly and will be liable to break away at some future time.

After the grafted stock is placed in the case, take especial care to keep the temperature at its proper height and have the case quite damp at all times. When they have been in the case a short time the stock is liable to send up young shoots, which should be cut back as soon as they appear. Take good care to keep down fungus. This can be warded against by syringing with lime water quite freely. Between each new and old batch of grafts it is a good idea to use a liberal supply of air-slaked lime in the bottom of the case. This helps to sweeten it wonderfully.

After the stocks have been in the case about eighteen days they should be united enough to permit giving them a little air. This must be determined by examining the union. Give only a crack of air at first and increase very gradually until they are hardened enough to be taken out into a house where a rose temperature is maintained day and night. A temperature a trifle higher than the rose temperature, say 65° at night to 75° in the daytime, is much better for a week or two, but this is not always possible.

They will need constant attention now. All the Manetti shoots should be kept cut off, the binding around the union should be cut wherever it is pinching, and they should be syringed on all bright days to keep red spider down. As soon as they need repotting they should be shifted into new pots, with a good, rich soil.

If they are watched carefully from now on and the mildew is kept in check, when the time comes for planting you should have good stock free from spider and fly. Attend carefully to the disbudding and keep your plants stocky and free from blind wood; then they will be ready for their winter's work. R. I.

The Balduin Controversy.

ED. AM. FLORIST:—The committee on Balduin rose feels it necessary to make brief comment on Myers & Samtman's letter recently submitted to it. Myers & Samtman state "we all know that one could not call a cut rose Columbia and the bush on which it grew Balduin;" this refers to Ernst Asmus having sold the cut blooms under the name of Columbia; but Mr. Asmus' record is quite

clear. He received the rose from Mr. Cook as an unnamed seedling and, wishing to market the cut blooms as Columbia, asked permission from Mr. Cook to so have the plant named. Mr. Cook could not give this permission as the rose had not been named and it required the raiser's (Mr. Peter Lambert) consent to name it. In the meantime the provisional name of Columbia was used on the cut flower invoices for market purposes only, and when the plant was eventually named Baldnin by Mr. Lambert, Mr. Asmus sold his stock of it to Peter Henderson & Co., under its correct name. Myers & Samtman say further: "This committee reports that we sold Columbia twelve months after this time as our 'new rose' as they put it." The expression "new rose" is not the committee's; it is taken verbatim from the contract which is signed by both parties, Messrs. Myers & Samtman and The Dingee & Conard Company.

Myers & Samtman are in error when they say: "At the time of our contract with The Dingee & Conard Company we did not know of any other stock of the rose, excepting what was in the hands of the New York party mentioned above (Asmus). As a matter of fact Myers & Samtman knew in the spring or summer previous to the time they sold the rose to The Dingee & Conard Company as their "new rose" that they had shipped a stock of it to Hill & Co., Richmond, Ind., labeled either Balduin or Columbia, and they also knew that Jennings & Co., Olney, Pa., had a stock of it. They were also aware that several western firms had it in their catalogues, as had Peter Henderson & Co., which latter fact was brought prominently to the notice of Myers & Samtman.

The committee in its first report, gave a history of the rose as far as they could, at that time, ascertain the facts, and Mr. Myers, of Myers & Samtman, was asked by the chairman of the committee, Mr. Lonsdale, to attend a meeting of the committee, but he did not do so. He did, however, give in writing his opinion "that Balduin, Red Kaiserin, Columbia and Helen Gould are one and the same."

In regard to Messrs. Myers & Samtman's aspersion on the integrity of the committee, the members of said committee are quite willing to be judged by their records of the case. Signed,

EDWIN LONSDALE.
ALEX. B. SCOTT.
ROBERT CRAIG.

The "Brass Band Introduction."

Two weeks ago there appeared in The Florists' Exchange a statement from Myers & Samtman which they claimed was their side of the case in the Balduin rose controversy. Among other things they said, referring to the importance of the variety: "So much was made of it that the correspondent of the AMERICAN FLORIST made a special trip from Philadelphia to write up these roses, and it was heralded in the columns of that journal with a brass band introduction in connection with Liberty." As a matter of fact I, the scribe referred to, happened to be in New York the night before this visit, helping the Philadelphia ten-pin delegation win a prize at the tournament of the New York Gardeners' Association. The next day I took a run over to see Mr. Asmus and his greenhouses. While there I made a note of a few things that interested me and wrote them up at my leisure for publication, as I though they would be interesting to those at a distance who were not able to see personally what this up-to-date and very successful rose grower was doing. Now as to the "brass band introduction," out of an article of about twelve hundred words I gave this rose a mention of just twenty-nine, as follows: "His own new rose. Columbia, is the most prolific Mr. Asmus has ever grown, he having cut twenty-five blooms per plant in a period of only two months." Nothing very brassy about that. I am sure that if the variety had impressed me I should have said more about it.

Regarding the supplementary report of the committee of the Florists' Club of Philadelphia, the first finding of the committee placed some of the parties concerned in rather a bad light. The horticultural press of the country took the matter up and in some cases they were badly censured. One of the accused firms thereupon asked for a further hearing from the committee, which was accorded them, and in this way they made it appear that they were not to blame. When the first report was received and accepted, additional type-written copies were furnished the different reporters present. In view of the fact that the supplementary report showed that an apparent injustice had been done this firm by the wide publicity given the first report, I moved that this latter be given to the trade papers also for publication, so that if through any previous action of the club the firm had suffered, it was as little as the club could do to see that it was furnished for publication. After a breezy discussion of at least half an hour, a vote was taken and out of some forty members present I was the only one who voted in the affirmative and I therefore said in my report of the meeting that the club did not care a pleayune and I say so yet, Mr. Watson to the contrary notwithstanding.

I am sorry that Mr. Watson does not like my reporting. I will endeavor not to let it interefere with my daily avocation. My connection with the paper, extending over a period of some fifteen years, has been entirely owing to my love for the business and a certain pride that this city with its numerous horticultural establishments and its skillful growers and florists should be kept to the fore and receive the recognition they deserve. As to Mr. Watson's accusations and other murmurings, I have nothing to say. I stand on my record and he can rest on his if he likes it. ROBERT KIFT.

THE M'CULLOUGH SILVER CUP.

Awarded to Wm. K. Partridge last week at the Indianapolis exhibition of the American Carnation Society.

Trees and Shrubs for the Lawn.

[A paper by Joseph Meehan, read before the Farmers' Institute at Philadelphia, February 19 1902.]

Acting on the suggestion that a great many persons are interested in trees and shrubs and their proper arrangement on a lawn, and that a few notes on the subject would certainly be interesting, it gave me pleasure to promise to prepare a few notes on this topic to be read before you to-day.

A very great deal of the pleasure anticipated by those who purchase a new place and have it planted will never be realized if the proper trees and shrubs are not selected and placed where they should be. This is the reason for the employment of a competent person to plan the planting. A great many of those who own grounds are, doubtless, as well able to plan as those employed, having in mind a tasteful and appropriate arrangement of the trees and shrubs, but to know the character of the subjects, whether tall growing or not, bushy or slim, of tapering or rounded outline, and the season of flowering, with many another point to be thought of, are matters only those entirely familiar with trees and shrubs know. It is this knowledge, combined with good taste, the successful landscape gardener possesses.

As will be understood from the foregoing remarks, what trees and shrubs to plant depends entirely on the situation. A tree of rounded outline is usually quite out of place near a tall building, as it often is when in close proximity to a group of tall trees. Taste comes in here, and those who possess it can quickly tell looking on a place where trees have developed which, if any, are not in their right positions. You will, therefore, see how very difficult it would be to give advice what trees and shrubs to plant and where, unless to suit a particular place. Had I a place large enough and of such a character as to permit of it, there are a number of trees I would not like to be without, of which the following are a portion: Norway maple, sugar maple, horse chestnut, cut-leaved birch, paper birch, catalpa, Japanese double flowering cherry, Judas tree, blood beech, Kentucky coffee, kœlreuteria, larch, sweet gum, tulip tree, Magnolia Fraseri, Magnolia tripetala, paulownia, mountain ash, oaks, linden, salisburia, deciduous cypress, Sophora Japonica and American elm.

In the above list there are those of pyramidal growth and those making a rounded outline, some valued for their white bark as, for instance, the two birches, and others, such as the blood beech, sweet gum and sugar maple, for beautiful foliage at some season of the year, while chiefly for flowering there are the catalpa, horse chestnut, flowering cherry, Judas tree, kœlreuteria, magnolias and others.

And among small trees I would surely want the Japanese blood-leaved maple, flowering peaches, aralias, dogwoods, Magnolia Soulangeana, double flowering crabs, rose acacia and snowdrop tree. No doubt there are many other lovely sorts you will think of not men-

tioned above, as I do, but I am only naming a few of a great many.

Among weeping, or drooping trees, for which there is often a place for one or more, there come to mind Japanese weeping cherry, Teas's mulberry, Kilmarnock willow, weeping willow, elm and dogwood.

Before parting with the subject of trees, I would again refer to the difficulty of making choice of sorts, for the reasons given, but I may say that if limited to a single tree for shade, I would probably name the Norway maple; for white bark, paper birch; for flowers, Magnolia Fraseri, and for autumn foliage, sugar maple. And among what I have named small trees, I would select for its flowering, Magnolia Soulangeana.

Coming now to shrubs, it is in place to say that suburban grounds can be made especially interesting by a liberal use of them. Of smaller growth than trees, a great variety can be used, giving, one after the other, flowers from early spring until frosts come Keeping the seasons in mind, the following varieties are named, though not without many a pang for favorites omitted: Flowering almonds, azaleas, callicarpa, sweet shrub, verbena shrub, clethra, Cornus alba, flowering hawthorns, Desmodium penduliflorum, deutzias, Exochorda grandiflora, golden bell, althæas, hydrangea, corchorus, the mock orange, deciduous holly, Japanese rose, Pyrus arbutifolia, Pyrus Japonica, Japanese Judas, spiræas, snowberries, lilac, Vaccinium corymbosum, Japanese snowball, chaste shrub, weigelias and purple plum.

Among shrubs, the greater number flower in early spring, and but few there are who will question the desirability of this The severity of our winters makes us all long for spring, and prepares us to enjoy the beauties the flowering shrubs present. There is the golden bell, with its buds half expanded before frosts are over, impatient to greet us with its wands of yellow flowers; and closely following it are the Japanese Judas, the flowering almonds and troops of others impatient to glorify one's grounds. And then the dear old lilac, without which no planting is complete, reminding everyone of us of our childhood's days. No one really feels that spring is here till the lilac is in bloom, and we would hasten its coming:

Reach out bronze buds to feel the sun's soft kisses'
Already red the currant flaunts her flowers.
But you, dear Lilac, are the joy one misses
In every breath of spring's long longed for hours.

In the list of shrubs presented several have been named not so much for their beauty of flowers as for ornamental characteristics in autumn chiefly in the way of bright berries or brilliant foliage, though there are some that flower nicely at that time. I have seen Spiræa Anthony Waterer in better display in late autumn than at any other season of the year. The verbena shrub, caryopteris; the clethra and the chaste shrub, vitex, are all late flowering. The berry bearing kinds are represented by the callicarpa, hawthorns, deciduous holly, Pyrus arbutifolia, Japanese rose and snowberries.

Were I limited to selecting a half dozen from the above list, I confess it would be no easy task, but it would probably be these: Golden bell, Japanese snowball, Spiræa Van Houttei, lilac, weigelia and hydrangea.

It is now time to make mention of some desirable large growing evergreens, and the following sorts are hardy and beautiful. Hemlock, Douglas, Norway, oriental and Colorado blue spruces, cedar of Lebanon, Lawson's cypress, concolor and Nordman fir, and the following pines, Austrian, Scotch, Himalayan, red, pitch and white. And among those of lesser size the various arbor-vitæs, including the golden and Rollinson's, Euonymus Japonicus, holly, juniper, yew, retinosporas, yuccas and, of course, laurels and rhododendrons.

CARNATION CRESSBROOK.

Among the evergreens mentioned there are several native kinds which have been very much overlooked. I am thinking particularly of those from Colorado, the Douglas and the Colorado blue spruce, the concolor fir and Pinus ponderosa, all hardy and beautiful. Then among native pines there are none better fitted for our use than the red, the pitch and the white. The red, which is the Pinus resinosa of the Michigan forests, resembles the Austrian in its heavy style of growth, but instead of the harsh needles of the Austrian it possesses soft ones, a most desirable feature for a lawn tree.

Though conscious that I am taking up much of your time, I am tempted to go a little further and touch on a most important subject, the proper management of the trees and shrubs we may plant. In our state, especially in the vicinity of Philadelphia, as a rule it makes but little difference whether we plant in spring or autumn. There are a few subjects we know it is useless to plant in autumn, magnolias, tulip and poplar, for example, and there are other things. But whether spring or autumn, do it early. Proceed with spring planting as soon as the frost is out of the ground and the soil dry enough to work nicely. Start with deciduous ones and finish with evergreens. With the closing of the month of September, start again. The order of planting may be reversed, setting evergreens first and ending with deciduous sorts. There is great gain in this early autumn planting. The soil is warm and usually moist, and the combination of heat and moisture entices out fresh fibers, and when winter comes the trees and shrubs are well established, and none are lost. This is no theory but facts, which have been demonstrated many times.

Referring to the soil being warm and moist in autumn, should it not be moist, after filling in about half the soil about a freshly planted tree and ramming it hard, pour in a quantity of water, filling

in the remainder of the soil when the water has thoroughly soaked away. As a rule, in autumn planting, a watering as above advised is good practice.

On the subject of pruning a good deal could be said, as it seems a something but little understood. When setting a tree or shrub it is necessary to prune should there be a partial loss of roots, which there is usually. The cutting away of some of the top equalizes the loss of roots, enabling the latter to sustain the remainder of the branches. It does not matter what part of the top is cut away, so there is a lessening of the whole. It may be a thinning out of branches only, or a shortening in of same, or a cutting away entirely of some of the lower ones, but in whatever shape the pruning is done, keep steadily in view the forming of a shapely tree or bush. Cut away any bruised roots, leaving a clean, smooth surface, as at these extremities the new fibers come. Summer is by far the best time to prune trees, yet winter is nearly always selected for the work. If we pinch out the top of a growing shoot the side buds burst into growth at once, giving two, three or four shoots in the place of the one, and in this way bushiness is had in a very short time. But when the shoot is dormant, as it is in winter, a cutting away of its top is an invitation to it to make another leader, stronger than ever. Many an overgrown tree, now an eyesore to its owner, would have been a source of pleasure to him had summer pruning been followed instead of that of winter. The same rule applies to shrubs that has been suggested for trees, but it must not be forgotten that nearly all shrubs flower from shoots of the previous season's growth, hence care to preserve a sufficient number of them must be exercised.

I must surely bring these notes to an end, as I spoke of doing awhile ago, but before doing so would like to speak of the pleasure to be derived from a lawn or garden, no matter how small it be. I think those brought up among trees and flowers are better than those without them, and keep up remembrances of their old homes, to their betterment. Those of us whose shadows are now falling towards the east and who had such surroundings can look back with a deal of pleasure to the happiness born of our association with trees and flowers, and can join with the poet who says:

Thus memory draws from delight ere it dies
An essence that breathes of it many a year,
Thus bright to my soul, as 'twas then to my eyes,
Is that bower on the banks of the calm Bendemeer.

WITH THE GROWERS.

CHRIST. HANSEN, ST. PAUL, MINN.

Christ. Hansen always has something interesting to show the visitor. His specialties are roses and carnations. In the former he grows Bride, Bridesmaid, Golden Gate, Liberty, Meteor and Beauty. Brides and Bridesmaids have always done well with him and can always be relied upon to produce good flowers and plenty of them. Golden Gate, which has been so profitable with many growers, is very disappointing here and not worth growing. Liberty has done splendidly and is now showing strong canes and plenty of buds. Meteor is a sure and profitable sort to grow but is hardly as remunerative as Liberty owing to bullheads in dark weather. This season, however, has been very favorable for this variety. American Beauties are not profitable and do not seem to take kindly to his soil and treatment, too many deformed buds and blind wood resulting.

In growing roses he has tried nearly all of the latest methods but finds grafted stock carried over two seasons and planted in benches about as good as any, although solid beds seem to do well and produce good flowers. He uses only grafted stock and will hereafter carry over all plants two years before throwing them out. As to fertilizers, he uses well rotted cow manure and liquid manure. For the distribution of the latter he has a large tank on the top of his highest house, forcing its contents to all the houses by an attachment to the city water pipes and applying it to the benches by the watering hose.

KENTIA IN WATERPROOF CREPE PAPER.

In carnations Mr. Hansen grows nearly all the leading sorts, including Crane, White Cloud, Lawson, Flora Hill, Mrs. Joost, Mrs. Bradt, Daybreak and Armazindy, but the bright particular star in this galaxy of varieties is the Guardian Angel, cerise pink, a shade lighter than Mrs. Lawson. This sort thrives exceedingly well here, produces abundantly and sells readily.

Mr. Hansen had a house planted to violets, Marie Louise and the single, Princess of Wales. The Marie Louise rapidly developed club root and have been abandoned, while Princess of Wales planted in the same bench is looking very fine and producing fine large blooms. All are planted in the same soil and have had the same care and treatment.

Although roses and carnations are his leaders he grows a large number of Boston ferns, Asparagus Sprengeri and Asparagus plumosus. The stock of these is very fine, a bench of Bostons being particularly choice. He also has a fine lot of Araucaria excelsa and Araucaria excelsa glauca purchased last spring and grown on since then. These are in the very pink of condition and the best I have ever seen. His Harrisii and longiflorum lilies are looking fairly well though the lily disease has made severe inroads on the former. One batch of fine longiflorums with two to three stems and eight to twelve buds was noticed. A few thousand geraniums and other bedding plants complete the list of stock grown here.

The houses, thirteen in all, contain about 35,000 square feet of glass. Mr. Hansen is a Dane, having come to this country about fifteen years ago. His present business was establishsd in the fall of 1888 and then consisted of one small house. By industry, perseverance and thrift he has gradually built up his present plant, which is one of the largest in his city. Starting with but a small capital he has amassed a modest fortune and is still on the youthful side of fifty years. FELIX.

The Production of Cut Flowers.

[A paper by K. E. Carlson, read before the Hartford, Conn., Florists' Club, February 11, 1902.]

Once in awhile one may hear complaint about the market being flooded with cut flowers. That may be the case and a fact to some extent in certain localities and in some really dull seasons, but as a whole, after investigating the matter, one will find the facts otherwise.

Anyone visiting a large establishment where thousands, not to say millions, of cut flowers are grown, may ask: "What are they going to do with all those flowers?" In answer to this it may be said that it is only a handful in the market and, when shipped to their various destinations, will disappear so quickly in many niches and corners that one is apt to think there were not so very many of them after all.

In every large city there is, of course, a heavy supply of cut flowers handled by the florists. Take the New York flower market, for instance, where loads of flowers are bought and sold every morning. To any one unfamiliar with the trade it seems an ocean of flowers and one is rather sceptic whether it is possible to dispose of such immense daily receipts. Well, just watch the dealings for awhile, and loads after loads will be seen disappearing to every part of the city.

Now, this does not mean that there exists any overproduction but rather tends to show that there is a great demand. Notwithstanding the enormous quantities of flowers which are raised annually all over the country it does not seem to be difficult for the florists to dispose of their goods, and at comparatively fair prices. The fact is cut flowers have long ago become a necessity and will remain so in the future. We all know that flowers are indispensable on many occasions, such as weddings, dinners, banquets, funerals and so forth, and a display, more or less, has always to be provided for. With this steadily increasing demand it is not likely that there will ever be overproduction. Now it is not merely as a necessity that cut flowers are grown and used so extensively throughout the country.

The public is learning to love flowers, so to say, and simultaneously encouraging the florists to widen and develop their skill and knowledge in order to produce better flowers. As time is advancing a much finer quality is called for and any florist who succeeds in raising first-class flowers will surely be rewarded for his efforts. Nowadays hardly anything but the very best will do and, as a matter of fact, quality instead of quantity is sought after. It is therefore most unlikely that there will ever be overproduction in the market.

Nature herself, while producing an abundance of fine flowers, is in some instances rather scant, especially as to rare and choice ones. Consequently we will learn from her that in order to obtain fine quality, large quantity is not likely to follow. Hence we will understand

that while endeavoring to develop and improve the flowers to their very best, the number of blooms will practically decrease.

According to this there need not be any fear of the market being flooded, and while the population of the country is growing, the consumption of choice cut flowers will surely increase, or at least the production and consumption will always remain about the same.

Aids to the Plant Salesman.

In the past few seasons there has been a very noticeable increase in the use of such florists' supplies as hampers, baskets, boxes, ribbons and so forth; indeed, so general has the use of this material become that the term "requisites" is no misnomer. It has been found that a fancy box enhances the value of a bunch of violets much more than the cost of the receptacle and so, too, has experience shown that a plant, particularly at holiday time, Christmas or Easter, tastefully dressed in a pot cover and ribbons is not only worth more money but is more easily salable than the same plant unadorned with these furnishings. Crepe paper has grown to have a tremendous sale for pot coverings but it is open to the great objection of quickly soiling unless the utmost care is used in watering the plant. To overcome this, waterproof crepe paper is now offered by most of the supply houses. It has all the merits of the older article and may be splashed with utter disregard, for it is impervious to moisture.

One of the most generally useful of the later introductions is Porto Rican matting, which is a peculiar loosely woven fabric which comes in sheets of convenient size, in serviceable plain colors and an endless variety of bright patterns. It did not take well when first offered but now that the retailers are finding out how greatly it improves the selling qualities of most of the plants it is coming to be largely used. The illustrations herewith show the character and use of both these articles. They are from photographs of plants standing on the sample case at E. H. Hunt's Chicago.

PANDANUS WITH POT COVERED WITH PORTO RICAN MATTING.

German Irises for Forcing.

ED. AM. FLORIST:—You will oblige by requesting your well informed correspondent, "J. B. K." to give the names of the best varieties of German iris for forcing. His recent article on forcing irises was a good one. These plants are growing in favor, for their long, stiff stems and showy blooms render them valuable. Many of them bloom for Decoration day. Only the well grown two-year-old roots of the German iris bloom satisfactorily. In forcing the weak shoots should be trimmed out. E. H. A.

The forcing of so-called German irises was tried many years ago by quite a number of florists in different parts of the country, among them myself, and although a few of these may still be at it in a limited way for all I know, most of them have found it to be an unprofitable operation. I do not want to discourage this correspondent by any means, only to caution him, because there are difficulties in shipping or even delivering the flowers in perfect shape, and this is a most serious drawback to their popularity as a winter flower. Of course the stems can be, and often are cut and shipped safely before any of the flowers are fully opened, for they will develop when placed in water, the same as gladioli, and last for a long time, but delivering the easily bruised, delicate flowers seems to be the most serious difficulty, especially in freezing weather, and the prices obtained are seldom satisfactory to the grower, nor can the retailer charge a very big price for them except on special occasions. We do not now force any German irises and have not done anything in that line for some years past.

Before naming the varieties which we found best adapted for the purpose I will say that the most suitable stock for forcing is obtained by dividing old clumps into three-eyed pieces, planting them out and encouraging the plants for two seasons to make vigorous growth before potting or boxing. Then they should be grown one more season in these pots or boxes. All the earlier varieties may be used, though I can recommend especially the following:

For a dark glossy purple none is better than the old I. atropurpurea (not atroviolacea). It is a very large flower, a splendid color and decidedly free flowering. For a light blue Celeste does well and the grand, I. pallida Dalmatica stands unsurpassed in my opinion for size, shape and coloring. For white and very pale lavender lilac, Florentina and Florentina alba are as good as any, perhaps superior and more acceptable on account of their fragrance. Bridesmaid is also a good lavender, with white reticulated falls. Victorine has white standards blotched and tipped with dark purplish blue, the falls being violet purple, veined with white. For a light primrose yellow I should select the free blooming I. flavescens, the falls of which are veined faintly with reddish purple.

The deep golden yellow standards of Samson may not be as large as those of other varieties of yellow, but they are so bright and showy that I prefer this variety to the larger flowers. It is an old, free flowering variety and does not grow very tall. The falls are bright purplish red, veined yellow. Nearly all catalogues describe the falls as "crimson," but I should hesitate to mention that color here. Iris aurea is a pure, deep yellow, both standards and falls being of the same color. It is by far the best yellow we have, but it is late and, being very rare, is too high priced for the purpose. Many different varieties are offered under this name in this country as well as in Europe. I know from experience, for I had serious trouble in obtaining the true I. aurea, as I knew it. We forced it successfully some years ago, though it came in after most of the other varieties or species had almost finished their blooming. I purposely mention only a few names here. If I gave a long list of varieties, which I might do, for we have tried our whole collection, there would be difficulty in selecting.

J. B. K.

Outdoor Chrysanthemums.

Many lovers of the queen of autumn have no greenhouse in which to cultivate this flower, but may obtain very good results by selecting the very early blooming varieties, in addition to those already named by recent correspondents, such as Brutus, bright sunset red; Jos. H. Cook, soft pink; Belle of Castlewood, blush; Elvena, bright pink; Harry Hurrell, clear yellow; Lady Fitzwygram, white; Yellow Fitzwygram, Marion Henderson, pale yellow; Nemesis,

blush pink; Soliel d'Octobre, pale yellow, and Sunrise, deep but clear terra cotta.

Plant them out as soon as all danger of frost is past, in ordinary garden soil without any fertilizer whatever. Pinch back to make them form nice, compact bushes with from ten to fifteen shoots to each. By the end of July these should be lightly staked to support them in case of heavy rains or rough winds and as soon as they set their buds, which will generally be by the middle of August, pinch out the first crown bud and select the next most prominent bud to be the flower. All the other lateral buds, as they show, should be carefully picked off. This will induce the remaining bud to develop to a good size and be ready to open at the earliest date before frost damages them.

In addition to the above list may be classed all the early blooming pompons. These, if treated somewhat as above produce very nice flowers and combine almost every shade of color known in chrysanthemums and in addition have the merit of not being damaged by light frost; in fact, many of them will develop nice flowers after quite hard frost.

For those not so favorably situated as regards climate, a sunken frame twenty-four or thirty inches deep, made of rough boards and built up twelve or fourteen inches above the ground level, so that the whole thing is, say, three feet or a little more in depth may be serviceable. In this plant the early, large blooming varieties as above, allowing room enough for each plant to develop. Disbud as for the open air. Then if rough, stormy weather or severe frosts prevail about the time they are beginning to open their flowers they can be protected by placing shutters or a piece of thin canvas over the frame. With a little extra care and attention fine exhibition blooms can be produced in such a very cheap structure. To get these, of course a less number of flowers on each plant should be left and each flower should be carefully supported by a stake to prevent damage and give it a straight stem with well developed foliage.

There are quite a number of the second early, large flowering varieties that can be bloomed very nicely in a frame similar to the above, but for a start it might be well to confine experiment to the very earliest sorts. JOHN N. MAY.

Boston.

STOCKS INCREASE AND TRADE SHOWS NO GAIN—PRICES ON THE DECLINE.—STOCK GOOD EXCEPT WHITE CARNATIONS.—VIOLETS CHEAPER THAN EVER BEFORE.—A VARIETY OF PERSONAL AND BUSINESS DOINGS.

The market has experienced quite a change since last week, prices falling rapidly on almost every item in the cut flower list and the incoming shipments being very heavy notwithstanding the stormy weather that has prevailed most of the time. All varieties of roses are more plentiful, the drop in value amounting to fully twenty-five per cent on most grades. Carnations are also on the down grade as to rates but are of excellent quality, excepting in the case of the white varieties, which run very poor and the standard white carnation is still a missing quantity in this market. In this connection it is appropriate to mention an old favorite, seldom seen now, Storm King, which Jas. E. Beach, of Bridgeport, Conn., is sending to Welch Brothers in excellent shape. Violets go at "any old price." Never before have they been so plentiful or so cheap and it takes the active efforts of the sidewalk vendors to keep the surplus down. The bulb flower market is also overstocked, even lily of the valley being in the deluge, and any price offered is acceptable to the growers, the quality, however, being very good. Of lilies there are not too many and prices are fairly well maintained. Sweet peas begin to cut quite a figure now and are very good.

Charles J. Dawson, who has been connected with the Essex County, N. J., parks for some time has resigned his position there to devote his time exclusively to the interests of the Eastern Nurseries, at Jamaica Plain, Mass., an enterprise in which he holds the main interest. High class hardy garden shrubs and trees will be a specialty.

The annual flower trade exhibition of the Co-operative Growers' Association will be held at the Park street market on Saturday, March 8. Substantial premiums are offered for carnations, violets and so forth, and deserving novelties will be suitably recognized.

Recent visitors include C. B. Weathered, F. Darrow, representing Aug. Rhotert, New York; A. J. Brown, Grand Rapids, Mich., and A. T. Boddington, New York. Also Messrs. S. J. Reuter and C. Warburton on their way home from the Indianapolis carnation meeting.

Ed. Hatch entertained a bunch of his convivial friends, as usual, at Wenham on Washington's birthday. They found the windmill revolving with old time velocity.

James Delay, of 220 Boylston street, went into bankruptcy February 19 owing $1,840.81, with assets of $125 in fixtures and $569 in accounts.

Chicago.

MARKET OVERSTOCKED BY BRIGHT DAYS AND THE CLOSING OF THE STATE STREET OUTLET.—CARNATIONS THE HEAVIEST GLUT BUT EVERYTHING SUFFERS.—PRODUCERS OF LOW GRADE MATERIAL GETTING THE WORST END OF THE DEAL.—SPECULATION AS TO THE LILY CROP.—MAN CANNOT LIVE WITHOUT STOMACH.—DOINGS OF MANY ORGANIZATIONS.—VARIOUS ITEMS OF GENERAL INTEREST.

The warm sun of the past ten days has brought out the buds at such an accelerated pace that the market is now well supplied with everything and it is only now and then that there is an item which is not in over-supply. Carnations have become a heavy glut. Whites continue to move fairly well, because a large portion of the retail business is funeral work, but of reds and pinks there are quantities of the lower grades going to waste. Of roses there are adequate supplies in every line except the better grades of American Beauty and of these the cut is increasing every day. There are so many violets in hand that only the growers of highest reputation stand any show, and of bulbous material there is more than the local storekeepers can be induced to take away. The high grade carnations and the best roses, and most of them average good, are fairly well consumed by the shipping demand, but the shipping trade does not need violets or bulbous stock in quantity. Even callas and Harrisii are standing around. Whatever may be the opinion as to the ultimate results of disqualifying the street salesmen, it is certain that at the present moment the market is suffering by their absence. With the fine weather of the past week the Greeks would have been able to move everything which has been coming into the market at as high prices as they are ever able to realize. This would produce an even greater effect on the market than could be measured by the mere sum in dollars and cents which they pay for their stock, for it would give a tone to the market which it always lacks when there are such quantities of material obstructing the wholesale channels. With the low grade fakirs' material out of the way, everything else would have an added value. There are those who argue that in the end the absence of the street fakir will have an elevating tendency in our trade, that it will result in the producer of first-class stock getting the big end of the business and will improve the average quality of the material sent to this market. However this may be it is pretty tough on the man who is not at present producing strictly fancy stock and the consensus of opinion among the wholesalers is that this was a pretty good old world before the city council took a hand in the game of running the flower business. Incidentally, it may be mentioned that in the past week business has not been as good with the down-town retailers as it was in the first half of February, when the street salesmen were still working. There are those who say that the presence of the street men has an invigorating influence on down-town retail trade. Who knows but that this may be the case?

Early last spring Paul Kruger received a great deal of newspaper publicity through a successful surgical operation whereby his stomach, which was badly affected by cancer, was entirely removed. After the operation he rapidly gained strength and was even able to do some work in the Graceland Cemetery greenhouses, where he had been employed for some years. The intestines apparently did all of the digestive work usually performed by the stomach. Of late, however, he has failed rapidly and died on February 18.

There is already considerable speculation as to the prospect for lilies for Easter. There is an abundance of Harrisii now on the market, but the growers are nearly all complaining of more disease than at any time in the past two or three years. Some of the principal producers say they have thrown out large proportions of their bulbs and in other cases some of them say that their stock is remaining very short and will be of little value for cut flowers, if it is ready in time for Easter.

This is the era of organization. The Greeks began it some months ago; the retailers got together two weeks since and at a second meeting at the Palmer House February 27 perfected a permanent association with J. C. Schubert and "Joe" Craig at the head. On the same afternoon the wholesalers held a preliminary meeting, every house but one being represented, and decided to have a little society of their own. They will meet again next week to perfect the plans.

There is again considerable complaint that carnations are not keeping. Even those growers who have the best reputation for their stock are receiving complaints that goods shipped out in perfect order are sleepy upon arrival at their destination. Another complaint is that with a great many of the varieties, notably Mrs. Bradt, the calyxes are splitting badly.

The Florists' Club held a slimly attended meeting on Wednesday evening, the plant exhibits being four exceedingly well grown cinerarias brought by Chas J.

Stromback. They were awarded a prize, which was donated again to the club. Jas. Hartshorne showed a fine vase of Mrs. Potter Palmer carnations. The second Wednesday in March will be the rose meeting.

At a meeting of the executive committee of the Horticultural Society of Chicago, February 27, the movement to join issues with the Chrysanthemum Society of America in the matter of exhibition next fall was endorsed and satisfactory progress reported in arrangements pending with a view to securing new hall of the Art Institute for same.

John Degnan, for many years with Vaughan's Seed Store, has taken an interest in the firm of McKellar & Winterson, which will hereafter be known as McKellar & Winterson Company. It is the plan to branch out into the retail seed business, carrying a general line of bulbs, shrubs and so forth.

Albert F. Amling, at Maywood, is building a range of Dietsch patent short-span greenhouses 105x125, in which he will grow Asparagus plumosus and Asparagus Sprengeri. Greens will be his principal crop next year, for he is already a large producer of smilax.

The town has been full of visitors this week, most of the eastern growers who were at the Indianapolis carnation meeting coming on to Chicago to see the famous producing establishments in this vicinity.

Anthony G. Then, son of Anton Then, who on February 1, started work on John N. May's place, Summit, N. J., reports that he is getting along very well and likes his surroundings exceedingly.

Frank Garland has a big cut of bulbous stock on and in general the quality is unusually high, but he says it is not moving as fast at present as he might wish.

The visible supply cut ferns seems to be shortening up and wholesalers have advanced the rate to $2 per thousand.

Kennicott Bros. Company says that the stock now in this market averages better grade than it ever did before.

E. C. Amling is figuring that Easter will beat all records for supplies are likely to be large.

J. B. Deamud will handle a fine line of pæonias in pots for Easter and is now showing samples.

Visitors: Mrs. Chas. Eickholt, Galveston, Tex.; Paul Berkowitz, Philadelphia.

Philadelphia.

HEAVY STORM DOES GREAT DAMAGE TO TREES AND CUTS OFF TELEGRAPHIC AND TELEPHONIC COMMUNICATION.—TRADE SOMEWHAT DEMORALIZED—PRICES AND OTHER NOTES.

This portion of the country has been visited the past week by one of the most devastating storms on record. In a few hours the finest trees, those that had grown and ornamented the lawns, parks and driveways of this city and adjoining country until they became fixtures of the landscapes, were very badly damaged if not entirely ruined. While there existed one or two degrees of frost, a falling snow turned to rain and soon loaded the trees with a coating of ice which became so heavy that in many cases not only the branches but the main trunk was snapped off, as the trees were also subjected to the additional strain of a strong wind. Many valuable orchards are a total loss and it will take years of careful training and replanting to replace them. The appearance of any collection of trees the day after the storm was as if a cyclone had just swept by and stripped the trunks bare. Telegraph, telephone, trolley wires and trees were mixed in helpless confusion and the city was completely cut off from outside communication except by railroad for three days and telephone connections in the city are not straightened out even now. This state of affairs had its effect on business, which has been none too good since Lent set in, and there has been very little doing this week. Prices are a trifle weaker but not to the extent that might be expected, considering the situation. Beauties range down from $7.50 per dozen; select teas still bring $10 to $12 per hundred and carnations $3 to $4. These, of course, are top prices for small quantities. Zimmer is now sending in some very fine Princess of Wales violets; 50 cents per hundred is the price. Doubles are also plentiful and some fine flowers are offered as low as 50 cents per hundred. Bulbous stock sells slowly at from $2 to $4 per hundred. There is a good assortment of blooming stock, which makes very attractive window decorations. Pennock Brothers made a fine display the past week with well flowered genistas in brass vases, the window being filled with these and orange-yellow tulips.

Chas. H. Fox, who has conducted a successful business at Twenty-first street and Columbia avenue for a number of years, will sell out to go more extensively into the hotel business at Atlantic City, which has also engaged his attention the last two or three years.

Meehan & Gracey have purchased the establishment of Mrs. John Plender, on Twenty-ninth street near Girard avenue, and will continue the business under the above firm name. K.

Baltimore.

ANNUAL LOCAL CARNATION SHOW A GREAT SUCCESS.—MUCH GOOD STOCK SHOWN.—THE JUDGES AND PREMIUM WINNERS.—NOTES OF INTEREST HERE AND THERE.

The Gardeners' Club made a great success of the carnation show Monday, February 24. The display was excellent and the attendance of both club members and general public very large. One of the novelties shown was a dark red seedling by John Cook, which he named Prince Henry, in honor of the distinguished Prussian who visited the city that day. In addition to the thousands of carnations shown there were good exhibits of roses and some pot plants, including cinerarias, cyclamens, begonias and orchids. Some of the patronesses were invited to judge the display but declined the responsibility and the task fell to Wm. Fraser, Richard Vincent and Wm. McRoberts. In the classes for cut carnation blooms they awarded four firsts, a second and a third to I. H. Moss; three firsts and two seconds to Halliday Bros; three firsts and a second to Erdman Bros; two firsts to C. R. Diffenderffer; two firsts to H. Weber & Sons; one first, one second and two thirds to Lehr Bros; one first to John Cook and seconds to John Rider, J. A. Gary and M. Duckstein. Moss was first for roses, Wm. Madsen second. Ruxton Floral Company was first for Liberty and Cook for Baltimore. The premiums for cinerarias and cyclamens went to C. R. Diffenderffer, and Mrs. Robt. Garrett. The latter showed fine orchids. Certificates were given to John Cook for unnamed seedling carnations, to Woodfall Bros., for Carnation Sylvia, to J. A. Gary for vase of roses, to Ruxton Floral Company for Golden Gate roses, to John Cook for seedling from American Beauty, to I. H. Moss for Begonia maculata, to John Cook for specimen Primula obconica, and to F. G. Bauer for mignonette. Special mention was given to R. Vincent, Jr., & Sons for twenty-five varieties of coleus, to Cook Brothers for geraniums and hyacinths, to C. R. Diffenderffer for ferns and to I. H. Moss for bay trees. E. A. Seidewitz was given first prize for Primula obconica and for a design of tulips, jonquils and daisies. A special premium was awarded to F. G. Berger for a funeral piece of freesias and Bridesmaid roses.

R. Vincent, Jr., & Sons, of White Marsh, will go into the bedding plant business more heavily than ever. They will have the contract to supply the plants for the flowerbeds of the Pennsylvania railroad system south of Philadelphia. This firm already has the most extensive plant in this vicinity.

The cinerarias and Harrisii and longiflorum lilies have never been as fine as they are this year at Patterson Park, and if everything is favorable a free public spring show will be given at the Casino.

The sleet and rainstorm of Friday, February 21, has done considerable damage to shade and ornamental trees in both city parks and in the suburbs.

The Golden Gate and Liberty roses exhibited by Messrs. Cook, Moss and Fraser have been exceptionally good.

Boiler and Piping.

ED. AM. FLORIST:—I am planning to build five 200 foot greenhouses, four of them twenty feet wide and one ten feet. The houses are connected, equal span, running north and south, with outside walls five and one-half feet high made with two and one-half feet of brick and the balance glass. The sash bars are twelve feet on the wide houses. How many 1¼-inch low pressure steam pipes will be required in each house to maintain 60° when the temperature outside is down to 15° below zero? Would it be advisable to put the boiler at one end of the range and run a 2½-inch flow to the other end, using the 1¼-inch pipes as returns? Or would it be better to put the boiler in the center and run the flows only half as far? The lay of the land makes the former course seem more economical. ELMER.

The boiler can be at either the end or the center of the range, as will be most convenient. If it is located as the end of the houses, and there is plenty of room to secure a good fall for the return, it would be well to connect the flow pipe with the coils at the end nearest the boiler, using a 2-inch pipe in each house to bring back the condensed water. If this is done twelve 1¼ inch pipes will be needed in the coils in each of the wide houses and six in the narrow house. The houses having an exposed wall should have an extra pipe. If the 2½ inch flow is carried through each of the houses it will take the place of one pipe in the coils. L. R. TAFT.

IN the February number of *Sunset*, published at San Francisco, Cal., there is an appreciative, illustrated account of Luther Burbank and his work.

MONTREAL, QUE.—In March 1901 a city water pipe burst in the street in front of Mrs. L. H. Goulet's flower store, undermining the foundations. The courts have just given her judgment against the city for $777.28 and costs.

THE AMERICAN FLORIST

SEVENTEENTH YEAR.

Subscription, $1.00 a year. To Europe, $2.00. Subscriptions accepted only from those in the trade.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Wednesday to secure insertion in the issue for the following Saturday. Address

AMERICAN FLORIST CO., Chicago.

It is evident that the new vases of the American Carnation Society were not selected with a view to displaying the flowers to the best advantage from an artistic standpoint.

THE hail campaign for 1902 opened at Sherman, Texas, February 19. Mrs. H. O. Hannah of that town met with a small loss but was insured in the Florists' Hail Association.

THE mailing label on your paper shows when your subscription expires; when you send your renewal note that the date changes within two weeks; it will serve as your receipt.

A MEETING of the executive committee of the Society of American Florists will be held at Asheville, N. C., next week. This will afford J. D. Carmody an advance opportunity to commune with the stars and tickle the angels' feet, and no doubt, for a time at least, he will forget his "kontrapshuns" and the internal regions.

The Chrysanthemum Society of America.

The tentative arrangements made at Indianapolis between the Chrysanthemum Society of America and the Horticultural Society of Chicago were formally ratified by the latter society on February 27, and it thereby practically becomes an accomplished fact that the first annual exhibition of the former society will be held in Chicago early in November in connection with the fall exhibition of the Horticultural Society. We understand that the local society practically guarantees all expenses, including the general list of preminms. John F. Cowell, of Buffalo, and Emil Buettner, of Park Ridge, Chicago, have been asked to act as judges of the joint exhibition.

Society of American Florists.

In the list of state vice-presidents recently furnished to the press, the name of Theodore Wirth, of Hartford, Conn., was inadvertently omitted. Mr. Wirth is superintendent of the park system of the city of Hartford and the S. F. A. interests of Connecticut are safe in his care.

DEPARTMENT OF PLANT REGISTRATION.

Henry Eichholz, Waynesboro, Pa., registers the following geraniums: J. D. Eisele, single zonal, color wine red; Jas. Davidson, single zonal, color true lilac, the first approach to a blue geranium; Jupiter, Mars type, scarlet; Venus, Mars type, pale salmon.

WM. J. STEWART, Sec'y.

Better Every Day.

ED. AM. FLORIST:—I am sending you another dollar herewith. Have been a subscriber since the first issue of your paper and like it better every number I receive. JOS. MCGREGOR.

Darby, Pa.

American Carnation Society.

DEPARTMENT OF REGISTRATION.

The Chicago Carnation Company, Joliet, Ills., registers Her Majesty, originating with them and grown four seasons as No. 56; flowers purest ivory white, very large and uniform, at no time even in midwinter measuring less than three inches in diameter; beautiful form, calyx never bursts, stems strong, from twenty-four to twenty-eight inches long; as a producer it has no equal, destined to become the white for summer cutting as it produces freely and evenly from July 1 to same date the following year.

ALBERT M. HERR, Sec'y.

No Fakirs in Chicago.

The wholesale men and the growers of Chicago are just having their first experience of the effects of the "no fakir" order recently issued by the city council. A canvass of the wholesale district reveals a condition which may be likened to that of Vesuvius just before eruption. Words more forcible than polite are to be heard everywhere among the wholesalers and, to-day, there is quite a contingent of growers in town who are saying what they think of the situation in a tone of voice which does not permit of any misunderstanding of the subject on the part of all within a block of the Rialto.

The situation after a week of the "no fakir" conditions, as reported by the wholesalers is that about one-third to one-half of the common stock remains unsold, while there is no appreciable gain in the purchases by the retailers. The present conditions, so they say, are such that the growers cannot do business and the commission men are, of course, in much the same fix. If the present state of affairs continues there is every likelihood of the establishment of cheap retail annexes to various wholesale houses by and with, not only the consent, but the hearty approval of the growers, and then there will be trouble.

Size of Boiler.

ED. AM. FLORIST:—What size of hot water boiler will be required in Ontario to heat a range of four cut flower houses 15x120, without partition walls. The boiler I have in mind is a common horizontal tubular affair. What size of tubes should I use, 2-inch or 3-inch, and how many. The boiler will be under the store and besides the greenhouses will have to operate five or six small radiators.

B. B.

Ontario is a large province and has quite a range in its minimum temperatures, so that what would answer in one place might not be sufficient in another. Where the temperature does not drop lower than 20° below zero a thirty horse-power boiler, with sixteen square feet of grate surface, would be large enough to maintain an average temperature of 60° in the different houses, and if the grate surface is increased to eighteen square feet it would suffice for a temperature of 30° below zero. It is presumed that by "tubes" the heating pipes are referred to. If wrought-iron pipe is used, it would be well to put in 2½-inch pipe for the flows and 2-inch for the returns, but with boiler tubes as pipes they could be 3 inch. For a temperature of 60° three 2½-inch flows and six 2-inch returns would answer for carnations, and four flows and eight returns should be used for roses. For sections where the temperature drops to 30° below zero, it would be well to add one return pipe in the outside houses. If 3-inch boiler tubes are used nine or ten will answer for roses and eight for carnations in each house.

L. R. TAFT.

A Valuable Fire Extinguisher.

ED. AM. FLORIST:—There is a preparation which is put up in a dry powder in pasteboard tubes, for extinguishing fires. It is very effective, but its price is prohibitive and from the private circulars to agents a large part of the cost is profit. Now can't you give us a formula for this purpose? It would be inestimable in its value, if at hand in the greenhouses constantly. C.

In regard to the common fire extinguishers which are employed, I will say that they are based upon the action of sulphuric acid upon carbonate or bicarbonate of soda. Apparatus of this kind requires that the sulphuric acid be kept in a separate vessel, which by immersion or breaking in some way allows the acid to come in contact with the soda which is in aqueous solution.

Dry powders used for fire extinguishers are usually composed of chloride of ammonia, or sal ammoniac. Since action depends upon the volatilization of the salt by heat, producing an atmosphere which excludes the oxygen and thus prevents combustion, such extinguishers are of no use in an incipient conflagration and are of very little value in checking one when already under way.

In addition to the above dry mixture, bicarbonate of soda has also been recommended and, curiously enough, a mixture which is composed of thirty-six parts of sulphur, fifty-nine parts of saltpeter, four of powdered coal and one of oxide of iron. It is hard to say how such an inflammable substance as this could be of much use in extinguishing a fire, except by the production of large quantities of sulphuric acid, which would exclude the oxygen from other combustible matter. There is no form of solid fire extinguisher which can be recommended with any degree of certainty.

H. W. WILEY.

OBITUARY.

MAURICE EVANS.

The sudden death of Maurice Evans, Sunday, February 23, was a great shock to his family and many friends in Columbus, O., and no doubt will be to many who will receive their first information through this note. The fact that he was overtaken by death while in the act of going up stairs to visit his sick and aged wife seems to make it the harder for those remaining. Mr. Evans was born in Carno, North Wales, March 2, 1821. At the age of 23 he came to this country, after serving full time as an apprentice in the manufacturing of wagons. His great love for flowers caused him to pay attention to their culture rather than follow his trade. He soon drifted into commercial floriculture. Mr. Evans gained quite a reputation as a grower, not only of flowers but of fine fruit as well. He

raised one of the finest strains of verbenas in the country, was able to show as fine home-grown lily of the valley as could be seen among the best imported, his roses were second to none in his city and his success as a grower of palms and fancy ferns is known to many. The greenhouses as well as the grounds about his residence, where he lived for fifty years, were perfection in neatness. On his grounds could be found a variety of the finest fruit trees grown in this section of the country and in the summer time stately palms with their leaves spreading over beds of crotons and fancy vases helped decorate his beautiful front lawn. As a judge he was one of the most reliable in our profession. Mr. Evans was a christian, an upright citizen, true to his friends, and a noble husband and father. He leaves a wife, two daughters and two sons and several grandchildren who have the heartfelt sympathy of all who knew him. CARL.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of ten cents a line (six words) each insertion. Cash must accompany order. Plant adva. not admitted under this head.

Columbus, O.

APPRECIATIVE PARTY GOES TO CARNATION MEETING AND VISITS NEAR-BY POINTS OF INTEREST.

George L. Miller, Ed. Underwood, J. R. Hellenthal, Joe Hellenthal, James McKellar, Sherman Stephens, and Albert Knopf composed the party from Columbus, arriving at Indianapolis last week Tuesday in a happy mood to do the carnation convention and take in all the sights, including those of New Castle and Richmond. The courtesy shown visiting members at these places was highly appreciated. While every one was well entertained, there was no time lost with sports and side issues, generally of no particular value to the average craftsman. The trip to New Castle was made by our party on Thursday and to Richmond Friday morning. After leaving Richmond some of our party started for Dayton, where they were well taken care of by J. B. Heiss. Sherman Stephens and J. R Hellenthal, however, made a bee line for Columbus, claiming they were anxious to get home and tell how it was to all the members of the craft who stayed at home. While our party were stopping at the Denison in Indianapolis, we were favored with a Welsh solo by John Evans, of Richmond. The extra effort of rendering the beautiful music from Mozart unfortunately strained his voice so that he could not speak above a whisper the next day. CARL.

New Haven, Conn.

The meeting of the New Haven County Horticultural Society on the evening of February 18 was attended by about fifty members and was characterized by much harmony and enthusiasm. As now planned, the exhibition of next fall, under the auspices of the society, will be the finest attempt of the kind ever made in this city. At the next meeting of the society, on March 4, further details of event will be worked out. A paper on the "Difficulty of Horticulture" was read by Wm. Ferrier, gardener for Eli Whitney.

BAKERSTOWN, PA.—The Pittsburg Rose and Carnation Company, Fred. Burki, president, has 35,000 feet of glass and 210 acres of land finely situated for the building up of a splendid producing business.

THE SEED TRADE.

AMERICAN SEED TRADE ASSOCIATION.

J. E. NORTHRUP, Pres.; S. F. LEONARD, Vice-Pres.; S. F. WILLARD, Wethersfield, Conn., Sec'y and Treas.

Twentieth annual convention, Twin Cities, Minn., June, 1902.

VISITED CHICAGO: F. H. Henry, of Henry & Lee, New York.

VISITED NEW YORK: A. J. Brown, of Grand Rapids, Mich.

ONION seed is not selling as fast as some seedsmen would like.

THE Dutch bulb drummers report good trade in general, rather better than last year.

RETAIL mail orders in the seed trade have shown a good increase during the bright weather of the past week.

RAIN has fallen for several days the past week on the Pacific Coast and onion and bean prospects have improved.

ONION sets in good sized lots are quoted at about $1.40 to $1.50 for yellows; $1.75 to $1.85 for reds; and whites 10 to 20 cents per bushel higher.

AN Erfurt correspondent writes that the stocks of carrot, cabbage and pansy seed are more in evidence than was expected.

New York.

TRADE NOT ACTIVE AND STOCK ACCUMULATING.—PRICES ON THE TOBOGGAN.—SIEBRECHT'S HAVE A BUSY WEEK.—SOME SPLENDID DECORATIONS.—CLEVER WORK OF JAPANESE GARDENERS.—GOOD STOCK FOR EASTER.—NOTES OF VARYING INTEREST.—TRAENDLY OPENS NEW STORE.—HODGSON INCORPORATES.

This week starts out with an unfavorable cut flower market. Weather conditions are decidedly against the retailer and as the influx of material is greatly increased the result is a precipitate drop in prices all along the line, which are not likely to recover again this season. The only exception to this are the cattleyas and American Beauty roses, both of which are in heavy demand for the German prince's reception festivities, and as soon as this occasion is over no doubt the Beauty will join its fellows on the downward slide. The supply of both roses and carnations is augmented and bulbous stock of all kinds is in very heavy supply, as are also the violets, which are sold, as a rule, at whatever figure the street men are willing to pay for them. Callas and Harrisii lilies are also accumulating and will now have to wait for Easter before they can make any kind of a recovery.

Last week was a very busy one with Siebrecht & Son. The dinner decoration at Delmonico's, which is illustrated in the supplement to this issue, was an exceedingly elaborate affair. The center of the table was arranged with a waterfall, in the center of which was a miniature rockery. The bank was composed of a border of violets, fourteen inches wide, edged with lily of the valley. About 10,000 violets were used in it. The fourteen columns and arches over the table were festooned with asparagus, pink roses and violets and there were over 3,000 tiny electric lights in the decoration. The view of St. Thomas' church shows the plant decoration on the occasion of the wedding of the daughter of General Roe. On account of the necessity of taking the flash light two hours before the ceremony, the floral part of the decorations, including bunches on the pews, and so forth, had not been put up at the time the photograph was taken. For the Tiffany funeral on February 20, Messrs. Siebrecht made a pall of violets, completely covering the caskets, and for this and the funeral of Judge Isham, which took place on the same day, they made some superb wreaths and mounds of cattleyas and other orchids, with violets, lilies and Farleyense ferns.

Mr. Steinhoff has two Japanese in his employ at his greenhouses in West Hoboken and the results of their cunning work are well displayed in a house containing 1,600 Crimson Ramblers all in beautiful leaf and bud and trained in a score of fantastic shapes. These and a house of hydrangeas are in promising shape for Easter. Mr. Steinhoff makes it his practice to repot his Ramblers and hydrangeas a few weeks before Easter, shifting into larger pots. This makes the plants stand much better in the dwelling house than they would if pot-bound and he claims that the adoption generally of this plan would have saved the hydrangea from the unpopularity through which it has passed during several years. There are altogether some 10,000 Ramblers and 60,000 lilies under cultivation here, the greater part for Easter. Mr. Steinhoff recommends Azalea Apollo as a good one for Christmas, a safe forcer and a color that is in good demand at that time.

W. H. Traendly opens, on March, a new store in the Cafe Martin which, from this date, will occupy the location of the old Delmonico establishment at Madison Square and Fifth avenue.

The J. M. Hodgson business has been incorporated with a capital stock of $40,000.

A Popular Cattleya.

Cattleya Trianæ variety Backhousiana is very rich in the variation of its blossoms. A glance in the florists' stores at this season will demonstrate this remarkable diversity of coloring. A flower of extraordinary beauty has just reached me, of the true Cattleya Trianæ Backhousiana. There are many forms of the variety in cultivation, but in this specimen, however, the characteristic feathered markings on the sepals and especially petals is very much in evidence, being of a decided rich purple at the apices. The labellum is broad, finely frilled and rich magenta purple. The whole flower is well shaped and of excellent texture. It came from the collection of E. G. Uihlein, of Chicago, who has flowered the plant for several seasons without showing any diversion in its distinct markings. A. DIMMOCK.

PACIFIC GROVE, CAL.—Wm. G. Bertermann, of Indianapolis, ex-president of the American Carnation Society, is here, in improving health.

Cow Peas. The Famous Forage Crop and Soil Improvers.

NEW LATE CABBAGE "HOUSER."

The largest Hard-heading, Fine Grained, Smallest Hearted, Distinct Round, Late Cabbage known. Gardeners will do well to give it a trial.

Mr. J. M. Lupton, the noted cabbage specialist says: It is entirely distinct and keeps over the winter better than any other kind.

Packet, 10c; Oz., 50c; 1-4 Pound, $1.50; Pound, $5.50, postpaid.
Catalogue free for asking.

H. L. HOLMES, Seedsman. HARRISBURG, PA.

LILIUM HARRISII.

As reliable stock as is produced on the Island, raised, crop-rogued, inspected, and packed by a grower always on the ground.

We offer this (V) brand of Harrisii as averaging the most reliable stock exported. Orders placed now can be supplied, late ones could not be filled last year and may not be this. Write for prices on 5 to 7, 7 to 9, and 9 to 11.

White Roman Hyacinths.

12 ctms. and upward, being the whole crop above the 12 ctm. size, no 13 to 15 ctms. being taken out.

150,000 of this grade imported by us the past season proved very satisfactory and we offer 1902 crop of same, confident that this grade contains the best value possible for the price, which is made for early orders. Remember the size contains all the bulbs in the crop above 12 ctms. and up to 16 ctms. Write for prices.

N. B.—Our usual percentage of extra early deliveries will be made.

Vaughan's Seed Store, CHICAGO. New York.

ADVERTISERS ALWAYS RECEIVE LARGE RETURNS FROM THE

Annual Spring Number

OF THE AMERICAN FLORIST TO BE ISSUED THIS YEAR ON MARCH 15.

(Two weeks before Easter, the most prosperous season in the Florists' calendar.)

THE Special Numbers of the AMERICAN FLORIST have become so well known [for their fine printing and illustrations, for their valuable trade text, and their business bringing powers] that it is not necessary for us to here to dwell upon these matters. They are appreciated by every reader and by every advertiser.

[W. W. Coles writes: "It is remarkable the amount of orders my 2-inch adv. brought me from the Special Number of your paper. Orders came pouring in from all parts of the United States. The Am. Florist is O. K."]

This Spring Number, March 15, will be equal to its predecessors in all its features [we mean that it shall be better, but past records are pretty high] and, as usual, will reach, throughout the United States and Canada, every person in the trade whose business is worthy of consideration, also leading foreign houses.

Advertisements in body pages will be taken at our ordinary rates, namely $1.00 per inch, $30.00 per page of thirty inches, with the usual discounts on time contracts. Advertisements on second, third and fourth SPECIAL COVER PAGES [printed on heavy toned paper] $30.00 per page, net.

American Florist Company

324 Dearborn Street, Chicago, Ill., U. S. A.

THE NURSERY TRADE.

AM. ASSOCIATION OF NURSERYMEN.
R. C. BERCKMANS, Pres.; R. J. COE, Vice-Pres.
GEORGE C. SEAGER, Rochester, N. Y., Sec'y.
Twenty-seventh annual convention, Milwaukee, Wis., June, 1902.

AT the Chattanooga Nurseries they say that the peach industry is booming in Tennessee.

MANY nurseries report good demand for nut trees. The hickory is difficult to re-establish when large; therefore medium sizes are wanted.

A TREE of increasing popularty for the lawn is Koelreuteria paniculata, the varnish tree. It is ornamental when not in flower. In transplanting it should be closely pruned.

A Destructive Storm.

The storm which visited eastern Pennsylvania and New Jersey on February 21 and 22, brought a heavy fall of rain with the temperature about freezing, and the results were most disastrous. Upon all trees, evergreen and deciduous, the long continued rain froze and accumulated until the smallest twig had a coating of at least an inch of ice. Add to this the accompaniment of a violent gale, and the consequences may be partly imagined. No one living in that section can recollect anything approaching this storm in destructiveness to vegetation. Trees are simply stripped of their limbs, and woods, roadsides and lawns present a scene of desolation. All through the night of February 21 many lovers of trees were helplessly listening to the resounding echoes of falling limbs, each one resembling the noise that would accompany the falling of a large tree, through the burden of ice. The chestnuts, maples and poplars were the first to fall, then the elms, ash and fruit trees, and finally the oaks succumbed. Landmarks and cherished trees have been treated with a ruthless hand and the loss is irreparable.

FRANCIS CANNING.

Notes on Trees and Shrubs.

When referring to insects in my recent notes I omitted the well-kown cutting scale. So much has been written about this louse, and especially the comments made upon it by the daily press, would tend to the belief that a savage monster had invaded our parks and gardens, intending to swallow the trees, root and all.

Though a troublesome and more or less injurious insect, the cutting scale is perhaps less dangerous than most of our other well-known tree enemies. That we already have received able assistance in destroying this louse through a small beetle belonging to the ladybug family, that feeds on the egg masses of the scale, may not be generally known. But how soon this voracious little fellow will be able to check the pest is a question and in the meantime we may as well lend our friend all the assistance we can.

Perhaps the best time to annihilate the louse is when it is crawling away from its warm nest to feed on the young, juicy leaves, about the first of June. Then a thorough spraying of kerosene emulsion will prove effectual. But when the egg masses cover entire limbs, and especially on smaller trees and within easy reach, a good wash of emulsion applied with a brush will greatly diminish the troublesome louse. This can also be said about the mealy bug so plentiful on a number of cratægus varieties, and especially on Cratægus Crus-galli and C. Oxycantha. Of course it will be understood that such work cannot be carried on when the thermometer stands near zero.

However carefully we may have covered up in the fall, an occasional trip among our protected friends will give assurance that everything is right. Winter's blasts may have uncovered some of them or dogs may have been frolicing in the herbaceous border. The recent dry freezing weather is dangerous to fall planted stock, and more so to evergreens that have been planted in late summer. Wherever possible a watering is of great benefit to the latter. This can only be accomplished where a good mulch has prevented the frost from penetrating the ground. In fact, all newly planted evergreens should be mulched, whether planted in late summer or spring, to insure success.

Catalogues are fast arriving calling one's attention to the great merits of new plants. Beware of novelties except for the trial bed. After they have proved hardy and worth a place in the garden then is the time to plant them in a permanent position. Orders for the coming spring are best placed now. This will enable the nurserymen to get the stock out in good season.

Apropos of spring orders, I desire to speak a friendly word for our American bladdernut, Staphylea trifolia. How pretty its greenish striped branches look with the ground covered with snow, and its bladder-like seed pods, from which it has derived its common name, rattling in the sharp winter breeze are not less interesting. Although outdone in showiness by its Chinese sister, Staphylea Colchica, it is hardy in northern Illinois and perhaps through a great part of the northern part of the middle states, more than can be said about the Chinese bladdernut.

The American bladdernut loves a shady, moist situation and is indigenous to the low woodlands skirting Chicago. It may be interesting to know that the yellow wood, Cladrastis tinctoria, will thrive well in a dry and sheltered position in northern Illinois. To substantiate this a specimen over twelve inches in diameter and nearly thirty feet high stands within a few miles west of Chicago.

" " " " **White,** 1-16 oz., 40c; Td. pkt. 25c.
" " " " **Pink,** ... Trade pkt. 25c.

BROWALLIA SPECIOSA MAJOR. The most beautiful of all the Browallias. The plants grow only about a foot high, form dense, little bushes, which are covered the entire year with an abundance of the most delightful sky-blue flowers, much larger than those of the other varieties. Trade packet, (2 0 seeds) 25c.

CANDYTUFT. New Giant Hyacinth Flowered. This improved new strain is far superior to Empress. The flower-heads are of immense size, six inches long and about three inches across, resembling a Dutch Hyacinth. They are pure white, and furnish excellent material for cutting. Pound, $2.50; trade pkt., 10c; oz., 35c.

VAUGHAN'S INTERNATIONAL PANSIES THE WORLD'S BEST. This is a combination of as many separate colors, types, blendings and unique kinds as can be found in the world. It has been made up and sold by us for twelve years; it **is the best general mixture in existence** and is most widely known and popular. Price, per oz., $10.00; ½ oz., $5.00; ¼ oz. $1.50; trade, pkt., 50c.

VAUGHAN'S "GIANT PANSY MIXTURE." Embraces, besides all the best shades and colors five special strains which can only be had in this and our International Pansy. This mixture includes the richest reds, coppers and bronzes, together with the most delicate rose and pink shadings, all the distinct colors of Trimardeau, the splendid Cassier strain with its delicate veinings. We have spared no expense to secure the newest, richest and finest sorts. Price, ¼ lb., $14.00; oz., $4.00; ⅛ oz., 60c; trade pkt., 25c.

CHICAGO PARKS BEDDING PANSIES, "CHOICE MIXED" In many colors. Pkt. 10c; ¼ oz., 30c; oz., $1; 4 ozs. $3

PANSY SEED—Good mixture of many colors, oz., 50c; 5 ozs., for $2.00.

"VAUGHAN'S BEST" MIXTURE OF LARGE FLOWERING PETUNIAS.

This mixture is made up by ourselves and includes all the best sorts and colors of the Large flowering and Fringed sorts and the unsurpassed Superbissima varieties with their delicately veined throats in various colors, and their truly mammoth flowers. We are possitive that **no other Petunia Mixture can produce flowers with as wide a range of colors as our Vaughan's Best.**

Trade packet, 1000 seeds, 50c; 3 packets for $1.25.

PHLOX DRUMMONDI.	Trade Pkt.	Oz
Grandiflora, Stellata Splendens, white, scarlet, pink, crimson, striped ... each	$ .10	$ .60
Large Flowering, finest mixed	.10	.50
NEW GIANT PYRETHRUMS, *Pyrethrum roseum hyb. grandiflorum*	.15	
SALVIA Splendens, Clara Bedman (Bonfire)	.25	2.25
"Drooping Spikes," one of the best ... ¼ oz., 50c;	.15	2.00
St. Louis best of all	.25	
SMILAX, new crop ... lb., $3.00	.10	.30

"VAUGHAN'S BEST" MIXTURE OF VERBENAS. This mixture contains all that is choice and desirable in Verbenas. It includes the Mammoth-Flowered strains of three celebrated Verbena specialists, the beautiful and dazzling Defiance; the Snow-Whites, Purples, Striped and all the Auricula-Flowered varieties, with thir large umbels of white-eyed flowers, the New Giant Striped and the Fordhook Mammoth Verbenas. We feel perfectly safe in stating that this mixture of Verbenas will eclipse every other strain offered by any other house. Oz. $2.00; ¼ Oz., 50c; trade Pkt., 25c.

MIGNONETTE, TRUE MACHET. The seed we offer produces dwarf, vigorous plants of pyramidal growth, with very thick, stout flower stalks. Finest in every way for florists' use and for pots. We have tested this with several of the fancy named strains and always with results favorable to our seed. Trade pkt., 10c; ½-oz., 25c; oz., 50c; 2-ozs., 75c; ¼ lb., $1.25.

NASTURTIUM.

	Oz.	¼-lb.	lb.
"VAUGHAN'S SPECIAL" Mixture of Tall Nasturtiums	$ .10	$ .20	$ .70
MME. GUNTHER'S HYBRIDS, true ... 10 lbs., $5.25	.10	.20	.60
"VAUGHAN'S SPECIAL" Mixture of Dwarf Nasturtiums	.10	.20	.70

OUR PASTIMES.

Announcements of coming contests or other events of interest to our bowling, shooting and cycling readers are solicited and will be given place in this column.

Address all correspondence for this department to Wm. J. Stewart, 79 Milk St., Boston, Mass.; Robt. Kift, 1725 Chestnut St., Philadelphia, Pa.; or to the American Florist Co., 324 Dearborn St., Chicago, Ill.

THE Baltimore florists' bowling club has invited the bowlers of the Florists' Club of Philadelpha to send a team to Baltimore for a match game on the afternoon of March 10, preceding the Gardeners' Club annual dinner in the evening.

At Jamestown, N. Y.

The bowlers of the Lakeview Rose Gardens rolled the first series of games for the Broadhead-Roney trophy February 21, the rose growers winning by 122 on total pins. The boys on both teams have promised to put up scores more worthy of the trophy next week. Following is the record:

CARNATION GROWERS.

Player	1st	2d	3d	T'l
J. Doxey	103	113	102	318

SHEBOYGAN, WIS.—J. E. Matthewson is figuring on acquiring additional real estate and building 5,000 feet more glass.

Cincinnati.

PERSONAL OPINIONS OF THE STOCK SHOWN AT THE CARNATION MEETING.—TRADE FAIR AND STOCK PLENTIFUL.—GROWER HAS TROUBLES.—VARIOUS NOTES.

Your scribe was one of a party of florists from this city who took the trip to Indianapolis and I want to give my candid opinion of some of the varieties on exhibition. In my estimation the best vase in the hall was Enquirer. The public in general, from the exclamations heard, admired this variety more than anything else staged. And what a beautiful rich color at night under the artificial light. What a pity the calyx of this variety bursts so badly. It was my good fortune to return home on the same train with Frank Deller, the young man employed by Richard Witterstaetter and who has charge of growing Enquirer. He informed me that for such a large flower this variety is an exceptionally free bloomer. The vase of Lawson, from Bassett & Washburn, was well done, and no doubt the Lawson has come to stay. The new variety, Mrs. E. A. Nelson, will be an acquisition and looks like a magnified Scott on a good, stiff stem. Cressbrook, as seen here, is another that will bear watching. Adonis will be the scarlet of the future, and Messrs. Hill and Craig made a ten strike when they captured this variety. Mrs. Potter Palmer, from the Chicago Carnation Company, looks to be a good thing. We must not overlook Estelle, which to-day is one of the best scarlets from a financial standpoint. If we could all grow the red Bradt, Chicago, like Bassett & Washburn this variety would also do for a large red. In the class of white Lorna and White Cloud appear to be the top-notchers. If everybody could grow Norway like Wm. Jackson, gardener to Mr. Procter, we would want no better white. Gov. Walcott is undoubtedly all right, but it is pretty hard to judge a flower when it has been on the road for three days. The same may be said of Empire State. Olympia and Mrs. Bradt still hold forth as the best variegated. There is not much demand for such varieties as Prosperity, Roosevelt, Maceo or Gomez in this part of the country, and this seems to be the universal opinion of all the florists at the meeting that I came in contact with. The show taken as a whole was one of which the American Carnation Society may justly feel proud. The hospitality of the Indianapolis craftsmen was unbounded.

Trade is all that can be expected. There is plenty of stock, and good stock at that. J. A. Peterson had a large wedding decoration Wednesday, which consumed an enormous amount of flowers. Hardesty & Company had the decorations for the golden jubilee of the Scottish Rite Masons, which were very elaborate.

George Murphy is having his share of trouble this winter. Beside having the stock in one of his greenhouses frozen, two of his children have been very sick and at death's door for nearly a week. Mr. Murphy has the sympathy of all the florists in this vicinity, and we all hope for the speedy recovery of his little ones.

S. M. Harbison, of Danville, Ky.; Messrs. Graham, Kennedy, Hart, Williams and Pentecost, of Cleveland; E. G. Asmus, of New Jersey, and Pierson, of New York, were in the city the past week, en route to the meeting of the American Carnation Society.

Thos. Windram, of Cold Springs, Ky., has the sympathy of the craft in the death of his father, which occurred very suddenly on February 24. Mr. Windram had reached the advanced age of 89 years.

Max Rudolph, Gus Adrian and Wm. A. Mann are on the sick list. D.

St. Paul.

TRADE KEEPS UP WELL AND A LARGE SUPPLY OF MATERIAL IS ALL CONSUMED.—GOOD VIOLETS.

Lent has had but little effect so far on trade and sales keep up well. Stock is fairly abundant but not over-plentiful and nothing goes to waste. Warm, bright weather has brought Easter stock along in good shape and from present indications there will be a full supply of good stock for that occasion. Lilies will be somewhat scarce. Some that promised well early in the season are coming blind. Funeral flowers have been in great demand and shipping trade has been exceptionally good.

E. F. Lemke is cutting some exceptionally fine Princess of Wales violets. This variety seems to thrive here under any and all conditions, produces fine long-stemmed blooms, early and late in the season, and is, I predict, destined to supplant all other varieties now in cultivation. FELIX.

Programme for Rose Meeting.

The following is the programme, subject to modification, for the joint session of the American Rose Society, American Institute and Horticultural Society of New York, at the Berkeley Lyceum Theatre, New York, Wednesday, March 12, 1902:

2:00 p. m.—Address of Welcome, Dr. Murphy, president American Institute.
2:15—Response, For the American Rose Society. For Horticultural Society of New York, G. T. Powell, vice-president.
2:30—Recitation, "The Rose," S. B. P.
2:45—Address, under auspices of Horticultural Society of New York, "Old Time Roses." S. B. Parsons.
3:10—Song.
3:30—Papers presented by the Am. Rose Society:
Best Garden Roses, Dr. R. Huey.
Hybrid Rose Stocks, Dr. W. van Fleet.
Key to the Garden Classification of Roses, L. Barron.
New Roses, General Discussion.
Recitation (illustrated with stereopticon effects) "Flora's Choice," S. Parsons.
4:15—The Rose in Picture. Colored photographic stereopticon slides exhibited by Cornelius van Brunt.
Song, "The Last Rose of Summer."

Adjournment will be taken at 5 o'clock precisely, for the regular annual meeting of the American Rose Society.

ANNOUNCEMENT.

We beg to announce that MR. JOHN DEONAN, who for the past eighteen years has been connected with the Seed, Bulb and Plant business, has associated himself with our firm, which will hereafter be known as McKELLAR & WINTERSON CO. MR. DEONAN'S long experience in the Seed, Bulb and other branches of the business will give our customers assurance of our ability in handling their business satisfactorily on these lines, and we respectfully solicit the opportunity of supplying your wants. We intend handling a full line of Seeds, Bulbs, Plants, Shrubs and everything the market demands in this line, and together with our already complete line of Cut Flowers and Supplies places us in a position to take care of your requirements on all lines. Our combined efforts to supply everything required by the trade gives us many advantages over smaller concerns. We save you money on express and freight charges and are able to execute orders on all lines promptly, having the stock of goods right at our command, and save you the middleman's profits.

Easter Specialties.

TRADE HOLDS UP WELL AND STOCK IS PLENTIFUL.—CARNATIONS OF SUPERIOR QUALITY.—NOTES OF VARIETIES.—LIBERTY DOES WELL.

As yet Lent has not made much difference in trade in general and, although cuts are heavy there is no alarming surplus. The quality of the flowers that we are now getting is extra fine, especially so in carnations. Marquis is being done very well and is the best selling variety in this vicinity, scoring on the other varieties on account of its fragrance, a point which the hybridizers do not make enough of. Lawson is splendid and still holds its reputation as the high priced beauty. In white Lorna is queen, but we are only getting it in limited quantities. White Cloud, Flora Hill and Peru are what we depend on for quantity. Morning Glory and Daybreak are running neck and neck. Daybreak is still as good as any of its color. Roosevelt, Maceo and Gomez are the standard crimson and Crane is the best scarlet we have yet found.

In roses Liberty has more than equalled its last year's reputation and is now in the Bride and Bridesmaid class. These three, with the addition of Perle, are the standard roses, Beauty not being grown in this vicinity.

Easter crops are looking fine and the percentage of diseased lilies is not very large compared to other reports.

Violets are more popular than ever for street wear. A. H. L.

Marietta, O.

A. C. Ludicke, formerly in business at Parkersburg, W. Va., is now grower for J. W. Smith, who has a fine business here. He grows a general stock for a retail trade. His roses, carnations and Easter lilies are in splendid shape. The funeral of Mrs. Childs, recently, used up all the cut flowers in town and Mr. Smith sent a nice order to Chicago for supplies. The stock arrived in fine shape.

Mrs. Norval Kaiger has a nice little place and everything is looking well.

Anton Schoepen is cutting some nice roses and carnations.

Schramm Brothers have a snug range of houses. L.

AURORA, ILL.—The Natural Guano Company suffered a considerable loss by fire in their fertilizer works February 22, but will at once rebuild.

GOLD MEDAL GLADIOLI

Groff's Hybrid Gladioli Received the Gold Medal and Thirteen First Awards at the Pan-American Exposition. I have the Latest and only Complete Collection of GROFF'S HYBRIDS in the United States, and control over Seventy-five per cent. of all Stock Grown and Introduced by Mr. Groff. Write for catalogue.

TRADE CONTINUES ACTIVE BUT STOCK IS IN GOOD SUPPLY.—BEAUTIES ABOUT THE ONLY SHORTAGE.—PLEASURABLE TRIP.

The Lenten season is having no appreciable effect upon trade, which keeps active in spite of the absence of the usual quota of gay events. The exceptionally fine weather is largely responsible for the favorable condition, it being the incentive to the lovers of flowers to seek the great variety of plants which the early spring days bring. Violets are fine, plentiful, and very much in demand. Beauties have been scarce and not much relief is yet in sight, most growers supplying this market being entirely off crop. There is a better supply of Bridesmaids, Brides and Meteors and of good quality, while the supply of carnations is at present a little in excess of the demand. Bulbous flowers are now quite plentiful and of uniformly excellent quality.

There was no meeting of the club last week as the president, vice-president, secretary and other members were absent from the city attending the carnation meeting at Indianapolis. They enjoyed the trip very much and were quite pleased with the proceedings and the grand exhibition of carnations. The side trips to Richmond and New Castle will long be remembered for the great pleasure and especial interest they afforded. The appreciation of Mr. Hill's generous entertainment of the party at his place was manifested by every one present. Geo. A. Rackham, Wm. Dilger, Rob't Klagge, Jno. Carey, Philip Breitmeyer and J. F. Sullivan returned home Friday night, the rest of the party returning Saturday evening.

Chas. Kaichen has retired from the Lake View Floral Company. The firm has given up the operation of the leased greenhouses at Brighton, Mich. Miss Gehrke is still in charge of the retail store in the city.

Louis Schulte, who for some time was in poor health, died of consumption February 18 and was buried in Mt. Elliot Cemetery.

Gus. Knoch, of Woodmere, has the extensive decoration of the big department store opening of Pardridge & Blackwell

Avery Rackham left Sunday night for Summit, N. J., where he will enter the employ of Jno. N. May.

J. F. Sullivan will attend the meeting of the directors of the S. A. F. at Asheville, N. C., March 4.

Miss Anna J. Schulte has the flower booth at the automobile show at Light Guard Armory.

Visitors: Rob't Greenlaw, Boston; Jas. McHutchinson, New York; M. Van Zanten, Holland; Wm. Dykes, New York; Geo. A. Heinl, Toledo; Paul Berkowitz, Philadelphia; Dan'l B. Long, Buffalo.

The Sensational New Rose for 1902.

MRS. OLIVER AMES.

For description, prices, etc, see advertisement in this Paper, January 4th issue.

What the leading Retail Florists of the different cities say of this Rose:

J. H. Small & Sons, New York City, under date of Dec. 6th, writes:

DEAR MR. MAY:—Regarding the rose Mrs. Oliver Ames, of which we have had cut blooms from you, we desire to say that we think very highly of it. The shade of color is most delightful; nothing better could be desired in stem or foliage and as to its keeping qualities we can hardly say enough. Those we had from you Dec. 1st are still good. Yours very truly, J. H. SMALL & SONS.

Chrysanthemums

Some New European varieties of sterling merit, the stock of which WE control for the American Market, and also all the cream of last year's new European varieties, and all the new American varieties of this season's introduction; for those contemplating growing for the shows next fall the above will prove winners

TRADE SHOWS A DECLINE.—STOCK ACCUMULATING BUT PRICES HOLD UP.—BULB FORCERS AT WAR.—GROWERS TO ADD TO GLASS AREA.

Trade has fallen off considerably the past week but, though stock is accumulating, prices remain firm, especially on roses. These are now in elegant shape and some good blooms are in sight for the American Rose Society's meeting. Meteors and Bridesmaids are well colored and with Brides are listed at $12 per hundred. Beauties are becoming more plentiful and better colored. Carnations are very fine but I notice that many of the larger flowers have a tendency to go soft. Violets are very plentiful and Princess of Wales seems to have the preference, doubles seldom being asked for. Bulbous stock is abundant but not as yet in over-supply. Some of the growers are at "loggerheads" about the above stock, wishing to control the market, and prices have been cut so low that Von Sions and tulips are sold at $1.50 per hundred, which leaves little margin if one buys first grade bulbs.

Most of the growers are going to put up additions to their establishments the coming season. J. H. Dunlop, Miller & Sons, Grobba & Wandry and some of the smaller growers will increase their glass area.

Cinerarias, rhododendrons, azaleas, genistas and other pot plants give the stores a spring-like appearance but are not very salable.

The date for the club's carnation meeting will be March 13, and it is expected to excel all former shows. H. G. D.

Cheshire, Conn.

Nettie C. Smith, proprietor of the Cloverleaf Greenhouses, is one of the many women who are doing much to advance the interests of American floriculture. When she embarked in business three years ago Cheshire was without a florist and what very few cut flowers were used were obtained from New Haven. Now flowers are in regular and constant demand for all sorts of occasions, for they are in regular supply. The Cloverleaf Greenhouses contain a good general stock, enough to meet ordinary demands, and the trade is constantly increasing, just as it can be increased in every prosperous community by careful attention to the business.

GRAND RAPIDS VIOLET CO., Grand Rapids, Mich.

CRESSBROOK. The coming Pink Carnation for everybody to grow.

Baltimore, Feb. 21, 1901, it scored 94 Points, the highest of any seedling. Cressbrook has never shown disease of any kind and is an extra free bloomer. Size of flowers under ordinary culture, 3 to 3½ inches.

Orders will be delivered in rotation on and after Jan. 1, 1902, at the following prices:

12 plants	$ 1.50	250 plants	$25.00
25 plants	3.00	500 plants	37.50
50 plants	5.00	1000 plants	75.00
100 plants	10.00		

C. WARBURTON, FALL RIVER, MASS.

Cressbrook may be seen growing at

THE E. G. HILL CO'S., Richmond, Ind., and at WM. NICHOLSON'S, Framingham, Mass.

New Scarlet Carnation "ORIOLE"

Sure to become the Standard Scarlet Carnation for florists to grow. The freest and earliest scarlet in cultivation; is always in bloom and a healthy grower. Orders booked now for February delivery. Price **$1.50** per dozen; **$10.00** per **100**; **$75.00** per **1000**.

AWARDED GOLD MEDAL AT THE PAN-AMERICAN EXPOSITION.

John B. Goetz, Saginaw, West Side, Mich.

Mrs. Palmer

Certificated at Indianapolis and elsewhere.

Largest, best formed, most prolific and as good a color as any scarlet ever introduced. $12.00 per 100, $100.00 per 1000.

Mrs. Higinbotham

Certificated at Indianapolis and elsewhere.

We can still book orders for a few more thousand of this sterling variety, the best of all light pinks. $12.00 per 100; $100.00 per 1000.

Chicot

Extra large white, beautifully striped in mid-winter, extremely fragrant, finest constitution. More profitable than any standard variety on our place last season, and is doing even better now. $6.00 per 100; $50.00 per 1000.

Elegant Stock.

WILHELM HARTMANN IMPROVED PAPA GONTIER, $1.00 each; 100 for $70.00

All three are the finest forcing and cutting Roses and will give highest satisfaction to growers and retailers. All orders will receive best attention.

P. LAMBERT, - TRIER, GERMANY.

St. Louis.

SUN HAS INVIGORATING EFFECT ON PRODUCTION. — CUTS INCREASED. — PRICES FALL. — STOCK IN MARKET.— VARIOUS NOTES OF LOCAL INTEREST.

The bright and warm weather that we have been having of late is beginning to tell on the market, as the supply of all stock is on the increase and prices are falling. The best roses still bring as high as $8 but other grades are to be had at $3. Some very fine Brides and Bridesmaids are to be seen and also a few American Beauties. These are still in very limited supply but prices are reasonable. Some very fancy carnations are being sent in. This market does not seem to be very good for double violets, as very few are sold and these at low prices. Californias have taken their place entirely. These are plentiful and the prices are falling fast. Some very fine sweet peas are bringing from 40 cents to 50 cents per hundred. Bulbous stock, with the exception of Dutch hyacinths, which bring $3 and $5, is sold at from $1.50 to $2 Von Sions were somewhat of a drug on the market last week.

Geo. E. Kessler, the landscape architect of the World's Fair, is back from a two months' trip through Europe and the work of removing and transplanting the large trees will soon begin. His assistant has been here some time and has all the trees marked as to their value and the position they are to go to. The contract of moving the large trees has been let to a Detroit firm.

E H. Michel had a very fine decoration at the Columbia Club last week. One quite novel idea was serving strawberries in calla lilies. The pistil was removed and the flower cut short and placed in a small pot with a calla leaf back of it.

A. Jablonsky intends to give up his retail store at Wellston and work entirely at the greenhouses. R. J. M.

Pennsylvania Horticultural Society.

The regular meeting of the Pennsylvania Horticultural Society was held at Horticultural Hall, Philadelphia, on February 18. The final arrangements for the spring show, March 18, were completed, some $500 in cash premiums being provided. The presence of a good orchestra and plenty of advertising ought to make it a success. The exhibits in competition were Primula obconica, cyclamens and hothouse tomatoes, all well grown. The Samuel Bodine prizes for best pair of Primula obonica went to John Thatcher and Ernest Wankler; for best pair of cyclamens to Wm Fowler and Geo. Robertson. The Henry F. Michell prizes for hothouse tomatoes went to Robert Forrest and John McCleary.

FRANCIS CANNING.

HEADQUARTERS for EASTER PLANTS

BLOOMING EASTER WEEK.

I have the largest stock in Philadelphia; 7 large houses and some hot beds, are crowded with them. Secure your supply by ordering now.

AZALEA INDICA

As I am agent for a large concern in Belgium and being a large importer of these choice Easter plants, I can sell you these direct at first hand and not through a middleman. Mme. Van der Cruyssen is a rare article this Easter. I was fortunate enough to get all this variety in Belgium I wanted and can offer you plants at the following prices: 5-in. pots, 40c to 50c; 6-in. pots, very bushy and large, fine shape, 75c to $1.00; specimens 7 and 8-in. pots, $1.25 and $1.50 each; extra choice specimens, very large, can't be beat, 9 and 10-in. pots, $3 50, $4.00, $5.00 each. Other varieties of Azaleas, such as Bernard Andre Alba, (white), also other white, Princess of India, Prof. Wolters, and other varieties of my own selection, 6-in. pots, 50c, 60c, 75c, $1.00 each; larger plants from $1.25 to $1.50 each. Also 5-in. pots, 40c each.

Cineraria—I have an immense quantity, best colors, 5½ and 6-in. pots, $3.00 to $4.00 per doz.

Spiræa Compacta and Floribunda, perfect jewels, 5½ and 6-in. pots, $3.00 to $4.00 per doz

Hydrangea Otaksa, 6-in. pots, $3.00 to $4 00 per doz.; 7-in. pots, 60c, 75c and $1.00 each.

Begonia, Pres. Carnot, Metallica and other good varieties, 5½ and 6-in. pots, $3.00 to $4.00 per doz.

Begonia Vernon, very fine, red, large, 4-in. pots, $1.50 per doz. Other good mixed varieties, 4-in. pots, $1.20 per doz.

Daisies, (white), Marguerite, 5½ and 6-in. pots, very bushy, $3.00 to $4.00 per doz.

Yellow Daisies, 5½ and 6-in. pots, $3 to $4 per doz.

Lilium Harrisii, raised from Henry F. Michell's selected 7-9 bulbs, ($100 per 1000) fine plants, 6-in. pots, from 5 to 10 buds to a plant at the rate of 10c per bud. No Lilies sold by themselves—other plants must accompany the order.

Dracæna Bruanti, 6-in. pots, 25 inches high, very fine, 60c.

Dracæna Indivisa, (imported), very large for decoration, 7-in. pots, 75c to $1.00 each.

Hyacinths, my own importation, raised from the finest named bulbs, all colors, 4-in. pots, $10 a 100.

Tournesol Tulips, (double red and yellow striped), 3 in a pot, $1.50 per doz. pots. Belle Alliance, (single), scarlet striped, 3 in a pot, $1.75 a doz pots.

Daffodils, (Von Sion), 3 in a 5-in. pot, $1.50 to $1.75 per doz. pots.

Azalea Mollis, 6-in. pots, 50c each.

Cash with order please. Money can be sent safely by postoffice or express money order or bank draft. All goods shipped at purchaser's risk.

Cleveland.

VISITORS TO INDIANAPOLIS AND VICINITY HAVE A PLEASURABLE AND PROFITABLE TRIP.—DISEASE IN THE LILY BULBS—MEETING OF THE CLUB.—TRADE FAIR—STOCK PLENTIFUL.

The Cleveland visitors to the carnation convention have all returned from their round of sight-seeing and are unanimous in saying it was a week well spent, proving both profitable and enjoyable. The thanks of the party are extended to their florist friends of Indianapolis for the royal manner in which they were entertained. All hail to the "Injeanny" boys, their hospitality will long be remembered. What a grand convention it was. Such a magnificant display of carnations was never seen before. The stay-at-homes missed a treat. It does one good to attend such gatherings, to meet so many familiar faces and to hear opinions expressed by the leading lights of the craft, from which a valuable store of information can be gleaned. Quite a number of the "old guard" were conspicuous by their absence. What was the matter with the City of Brotherly Love? The home of the first "President of Pinks" was without representation. Just think of it, a city with nearly a million and a half people without a representative! Poor, old Philadelphia, wake up, and don't get into the Rip Van Winkle class.

The outlook for Easter stock seems promising, the bright weather having helped to push along hydrangeas, lilies and other backward stock. Ramblers promise to be very good, far in advance of former years. Quite a number of diseased lilies are to be seen. Longiflorums seem to be worse than Harrisii. It is becoming a serious question, this lily business. One hardly knows what to buy. The agents all promise healthy bulbs, free from disease. But my candid opinion is they don't know what they are talking about. They have got to take the word of the Japs for it, and they, too, are getting "foxy." It is claimed by some that strictly healthy bulbs are being sent to this country from the Azore Islands, but as the bulb industry on the Islands is in its infancy, little can be said about it.

Business for the past week has been rather slow. As predicted some time ago, a glut of bulbous stock has developed. Roses are becoming more plentiful, quality fine. Smilax is a drug but asparagus is not over plentiful. Single violets are coming in large quantities and sell well. There is no oversupply of carnations yet, good stock selling fairly well.

The regular meeting of the Florists' Club was held on Monday evening last, over twenty members being present. D. Livingston was elected a member. Isaac Kennedy gave an account of what he saw and heard at the carnation convention and other places of interest visited.

RAYNOR PREPARES FOR THE ERECTION OF THE FINEST RANGE IN THE SOUTH.—DETAILS OF THE PLAN.

Chas. Raynor has bought the entire plant of the Anchorage Rose Company, consisting of 32,000 feet of glass. He will remove the greenhouses to his forty-acre place called Rose View, where he will erect an up-to-date range in every respect. He will use the Garland iron gutter system and, when completed, will have a solid block of 54,000 feet of glass, built in the most substantial manner. The walls of the houses are to be of concrete and the benches of hollow tiles. A new feature will be a subway through the center and under the block of houses, where the boiler rooms, ice cellars, engine room and coal bins will be located, and where there will be a wagon-way so that wagons may drive through from one side to the other. The great convenience of such an arrangement is easy to see. The bottom of the subway will be in solid limestone. The rose houses will be heated by a 100 horse-power boiler and the carnation houses by a fifty horse-power boiler. The glass used is 18x20, double strength.

F. Walker & Company, New Albany, Ind., have purchased the glass to erect a rose house 22x300 and will commence as soon as spring opens. H. G. W.

Springfield, Mass.

TRADE TAKES ON RENEWED ACTIVITY AFTER A BRIEF LULL.—GOOD STOCK IN MANY LINES.—NOTES.

For the first few days in Lent business was poor but now cut flowers of all kinds are in good demand. Funeral work has been exceptionally good and has kept stock from going to waste. All the florists' stores are showing good stock of flowering plants, cut roses, daffodils, tulips and freesias and carnations which are far ahead of former years and sell at from 60 cents to $1 per dozen. Callas are plentiful, good and find ready sale. These were not grown here a few years ago, but owing to the Harrisii and longiflorums being so badly diseased, were taken up again. All stock looks promising for Easter and I think will be on just right.

Adams & Sons are busy working up a good stock of bedding plants, which look well, and for which they have a good demand. A. B.

HAERENS BROS. SOMERGEM, BELGIUM.

THE

Gardeners' Chronicle.

A Weekly Illustrated Journal.

ESTABLISHED 1841.

The GARDENERS' CHRONICLE has been FOR OVER SIXTY YEARS THE LEADING JOURNAL of its class. It has achieved this position because, while specially devoting itself to supplying the daily requirements of gardeners of all classes, the information furnished is of such general and permanent value that the GARDENERS' CHRONICLE is looked up to as the STANDARD AUTHORITY on the subjects of which it treats.

Subscription to the United States, $4 20 per year. Remittances to be made payable to H. G. COVE.

OFFICE:—

41 Wellington St., Covent Garden, London, England.

Minneapolis.

BRIGHT WEATHER BRINGS ON CROPS RAPIDLY. — EVERYTHING PLENTIFUL BUT VIOLETS.—NOTES.

The bright, sunny days are making a great surplus of carnations, and tea roses are coming in by the thousands. This, with the lull in business caused by Lent, will cause prices to take a most decided drop. Bulbous stock is plentiful, although a brisk demand for Romans has shortened them up somewhat. Violets are scarce, as a good many are throwing them out to plant other stock. Decorations have been few this week, with nothing doing except a heavy funeral trade, making white flowers in demand. The growers now are commencing to give more attention to their Harrisii lilies, and from the general outlook everything is promising. Wild smilax from the south is quite an expensive article by the time it reaches this market, as the express companies charge on gross weight instead of billing through at the net weight the invoices state.

A. T. Shotwell, of Shotwell & Graver, Fargo, N. D., has been in the city looking after Easter novelties. C. F. R.

Paterson, N. J.

NOTHING DOING SINCE THE BIG FIRE.—ALL ENERGIES DEVOTED TO PREPARATIONS FOR REBUILDING.—NOTES.

Since the great fire which destroyed almost the whole of the business section of Paterson on February 8, there has been little doing save clearing away the ruins and making preparations for rebuilding. Mrs. A. B. Murray, who formerly conducted the Clear View Greenhouses, had a building on the main street burned to the ground. She sold the lot this week for $100,000. Ed. Sceery was the only florist who suffered by the fire. He lost the front of his store and his stock was badly wrecked. He went to work at once and has the place all fixed up in better shape than ever. He lost about 300 palms and Boston ferns with no insurance, but his stock was insured.

While the fire was raging Mr. Sceery had some pieces to make for a funeral. He got some of his stock out and made up the designs in a nearby store, while the firemen were pouring water into his place. SILK CITY.

BLOOMINGTON, ILL.—W. T. Hempstead reports a very favorable season, with prospects for a particularly active spring business.

GREENSBURG, PA.—The greenhouses of Jos. Thomas, north of town, narrowly escaped destruction by fire on the night of February 20. The night watchman did quick work with the hose and averted serious loss.

WE NOW OFFER

Washington.

ELABORATE DECORATION UPON OCCASION OF VISIT OF GERMAN PRINCE.—MANY GOOD ROSES USED.—LEISLER HAS NEW RANGE.

The decorations at the White House for the reception of Prince Henry, February 24, were very elaborate. The parlors and corridors were adorned with groups of foliage plants. The blue parlor, where the Prince was received was garlanded with Asparagus plumosus, the corridor and the red and green parlors with southern smilax, the mantels banked with plants and cut flowers and long-stemmed roses in vases. In the blue parlor American Beauty and Ivory were used and in the green parlor Bridesmaids and in the red parlor Ivory. The east room was also elaborately decorated and used as a banquet room. The table was decorated with plaques of Primula obconica and crystal vases of roses. The American Rose Company furnished the roses, the Beauties coming from S. S. Pennock, of Philadelphia; they were extra choice. J. R. Freeman had the decorations at the German embassy.

George A. Leisler has established himself in Virginia, three miles from Washington, on the line of the proposed electric railroad to Great Falls. He has twenty acres of good land, plenty of water, and has built four houses covering about 10,000 square feet. The boiler room is 20x30, with potting shed and helps' lodging over it. Roses, carnations and bulbous stock did very well with him considering the time he had. He took possession of the place August 1, 1901, and had it planted and glazed by October 1. He is now getting up a large quantity of bedding plants. He disposes of all the flowers at his store in West Washington.

Miss Alice Roosevelt rose was used by the American Rose Company to decorate the Prince Henry cars for the return trip to New York Monday night. P. G.

CUMMINGSVILLE, O.—Matthew Fells, 64 years of age, and a florist for a lifetime, is ill and his friends fear for his sanity.

LENOX, MASS.—Owing to the large number of new members recently elected, the Lenox Horticultural Society has found it necessary to remove from Sedgewick hall to the more roomy quarters of Colonial hall, where all future meetings will be held. The society will be pleased to welcome exhibits of new and rare plants and flowers from commercial growers and others at the regular fortnightly meetings and will give awards for same according to merit. The annual autumn exhibition will be held on or about October 23.

"DORIC" HEATER.

Take Notice, Please.

Ye greenhouse owners please take note of the following advantages offered by the

"Doric" Heater

Deep, round firepot, with no dead corners; heating surfaces so arranged as to get the full benefit of the fire; burns any kind of fuel, hard or soft coal, coke or wood; requires no brick setting. Is extremely durable. Does just what a heater ought to do most economically. Don't change or purchase until you examine the "Doric" Heater.

The Dissemination of New Roses.

[A discussion before the Florists' Club of Philadelphia at its meeting March 4, 1902.]

E. G. HILL, RICHMOND, IND.

The dissemination of a new rose is attended with no small amount of trouble, to say the least, and to successfully launch a new variety requires good business generalship.

The variety must first be found, then propagated in sufficiently large numbers to give bloom in considerable quantity for the purpose of display and exhibition. To grow sufficient plants requires considerable bench space and this means expense.

Without being able to secure enough bloom to set up vases containing twenty-five to 100 blooms, the effect produced on the average grower is nil, except in the case of a few discerning individuals who are able to accurately estimate the status of a new rose by a flower or two, but to make a decided impress necessitates the use of a large quantity of flowers.

If a house or more be devoted to the growth and development of a new rose, the owner naturally wishes to reimburse himself for the expense incurred, hence the desire to sell the bloom. When flowers of an undisseminated rose are sold, with stems attached, the transaction takes on a business character and from my point of view, the purchaser has a right to do whatever he pleases with stock thus purchased.

If the proprietor of a new rose can cut out, or kill the buds on the stems he sells, well and good, but he takes a certain risk in the selling, and if, perchance, the purchaser of the blooms is successful in propagating these buds, the owner cannot justly complain, for he has received remuneration for the same.

If the possessor of a new rose sends his blooms to a show or exhibition and parties get possession and propagate same, then the ethics of the profession would certainly brand the man so doing as dishonorable; or were the possessor of a new rose to send his blooms to an individual or firm for their inspection, then to propagate such would certainly be reprehensible conduct.

From my standpoint, to avoid this risk, there should be a federal law protecting the ownership of a new rose, plant or fruit for a limited number of years, so that those who give of their time and money in the way of experiment may reap a fair reward for their industry and pains.

Surely no one will deny that the raising of a new plant is accompanied with fully as much, or more, work than is bestowed on most mechanical appliances. If a patent can be secured on a device, or upon some useful article, or medicine, why not on a charming new rose, plant or fruit?

ERNST G. ASMUS, WEST HOBOKEN, N. J.

I have for the last two or three years given the matter of introducing new roses a good deal of thought, but freely admit that the more I think the further I seem to be from solving the conundrum. A new rose in this country, no matter how good it is, or how much it is advertised, is hard to sell unless it is first demonstrated by the introducer that the rose has commercial value; by that I mean that the rose is well thought of and bought by the general public.

But here comes the nut to crack. How are we going to protect our property, when we sell to the general public the blooms of a novelty not yet in commerce? The experiment has been tried to cut or chisel out the eyes, but with only partial success. I, myself, have been able to both grow and root cuttings and graft wood from which I, myself, carefully removed as I thought all eyes, only to find that I had been all at sea. It is true I did not succeed in getting good plants of all I tried that way, but still I could get five per cent of those I did try; enough to lose a man's property, if, after the blooms were first offered for sale it takes two or three years to demonstrate that the rose is really what it is "cracked up" to be, and a good seller to the general public.

I am sorry to say that among the florists of America are a great many who are unscrupulous enough to try and buy up such blooms of novelties, just to try and get ahead of the introducers, who may have paid thousands of dollars for what they thought was a good thing. These "sharks," as I call them, will show you with pride, should you happen to visit their place, a few plants propagated in that way, and glory over it that they have been able to outwit the originator. This practice in my mind, should be condemned by all honorable men. I hope this controversy will lead to some way by which a man's patent right upon a novelty can be secured for at least five years. I think it is a subject that ought to be taken hold of by the Society of American Florists, which, with its national charter, can do more than all the florists' clubs in the country combined.

If an introducer of novelties could be protected for, say, five years, he could then send plants on trial to various localities, thereby proving in advance to the would-be buyer whether the novelty does well or not, whichever the case may be.

I see by the trade papers that the same subject has been stirred up in England and been widely discussed. Wouldn't it be well if we could co-operate with our brethren across the water in the matter, and get some international law upon the subject?

But I am afraid I have been wandering. You wanted to know how best to protect a rose novelty. I must openly confess that I do not know of any way, and will have to leave the subject for better and wiser heads than that of your humble servant.

ALEXANDER R. SCOTT, SHARON HILL, PA.

As you desire to hear from me on this subject, I can only say that the best way to disseminate a new rose will have to be decided by the introducer. The disseminator of a new rose is very badly handicapped in the cost of its introduction. When a new carnation is sent out the grower can create a demand for his novelty by exhibiting at the various flower shows. For two or three years before distributing plants he can have a profitable investment in marketing his cut blooms.

With a new rose, if the introducer sells the cut flowers the year before he disseminates the plants, no matter how carefully he disbuds his flowers (which in itself is a great labor) there are always men who will experiment and get up a stock by purchasing the cut flowers and propagating from the wood.

While this practice is not indulged in by many first-class florists, still it is within the law and has to be taken into consideration. It is therefore, to my mind, better to sell cut flowers of the rose in the year of its introduction only.

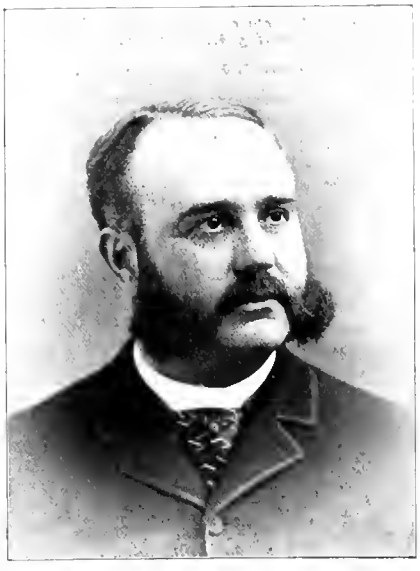
The grower having a new rose to introduce first works up a stock of 200 or 300 plants to test it, from which he gets no remuneration. The following year he propagates enough to have a house of this rose so that he can exhibit it at the various flower shows. This house is generally the best on the place, and from which he loses a year's income. The following year he introduces the rose, plants it largely for cut flowers, and if the rose takes, he makes a very good investment. If it is only moderately successful the investment will not be so good. He naturally propagates a large stock in order to fill orders with the best grown plants, and if they are not sold he cannot lower the price, which is generally a high one, because he has to protect both his agents and the florists who have bought stock of his novelty. These plants have either to be thrown out or carried over for another year.

There are so few varieties of roses that are profitable for winter forcing for cut flowers that a novelty to be really successful must have so many good points that the grower can see at once how he can make his area of glass more profitable by planting this novelty. It must also be so good that the retailer can sell it on sight. Of all the new roses annually introduced, even the roses introduced for winter blooming, how few there are that stand the test of time and are grown in quantity five years after their introduction.

As agents for Alexander Dickson & Sons, who originated Liberty, we test most of their promising seedlings, and at the present time we have four or five seedlings that I think are a decided advance on varieties of the same color and habit, and yet, unless they show more decided points of merit after another year's trial, they will be introduced as garden roses in Ireland. The expense of introducing them as winter forcing roses would be too great to take the risk. My own plan is to keep on testing carefully the new seedlings or Messrs. Dickson & Sons, and when the greatest living hybridizer of roses, Mr. Alexander Dickson, produces a variety that will have as much merit as Liberty, to push it for all it is worth.

Alexander McConnell.

The gentleman whose portrait appears herewith is one of the most successful of New York's retail florists. He is also, personally, one of the most popular. Unlike



ALEXANDER M'CONNELL.

many of the flower dealers of the large cities he has the advantage of a considerable horticultural training. He was born and brought up on a farm in the Isle of Man. After coming to this country his first experience in horticulture was on the estate of J. C. Green, on Staten Island, under the late Wm. Charlton, a gardener who was prominent in his day and of high repute as a grape grower. From here he went into commercial floriculture with the firm of Charlton & McConnell, at West New Brighton, Staten Island. Later Mr. McConnell moved to New York city and formed a partnership with Adam Sim, a nephew of the late Jas. Fleming, opening a store on Sixth avenue. This was in 1872. Three years latter Mr. McConnell bought out Mr. Sim, continuing at the same place until 1889, when he removed to his present establishment on Filth avenue. Perseverance and good management soon brought him the substantial support of the much-sought exclusive "400" and the list of his patrons to-day includes the names of many families of world-wide fame. Outside of his regular floral business, Mr. McConnell does considerable landscape and garden work. He carried on the planting at Georgian Court, the Lakewood estate of George Jay Gould, for nearly two years, working from plans drawn by Bruce Price, where a vast number of evergreens, particularly pines, were set out. A very useful pamphlet containing a descriptive botanical classification of all the trees shrubs and hardy plants on the estate was published by Mr. McConnell in 1900, for free distribution.

A Typical Japanese Garden.

The accompanying illustration is from a photograph taken in Okayama Park, Oyayama, Japan, and supplied by H. Yoshida, who visited America and Europe last summer in the interest of the Imperial Trading Co., Todamachi, Yokohama. Mr. Yoshida says this is one of the three great parks which are typical of Japanese gardening and that it is in every way worthy of its renown. The work had its inception more than 300 years ago, under the Marquis of Ikeda, then the governing feudal lord of that place. Sparkling rivulets feed the limpid ponds, the grass is green and velvety, the symmetrical dwarf pines have been grown for generations and the whole formal effect is most representative of the national outdoor art. The specimen trees and shrubs are of wonderful perfection, time having served its part in their magnificent form and perfect establishment. Oyayama is a city of 70,000 inhabitants and is only eight hours from Kobe.

Methods and Results of Sterilization.

[*Read before the Massachusetts Horticultural Society, by Prof. George E. Stone, of Hatch Experiment Station, Amherst, Mass.*]

In general the treatment of diseases in greenhouses demands other methods than those which out-of door plants are subject to. In the greenhouse the gardener has the conditions largely under his control, whereas he can modify only to a limited extent the conditions out of doors. Many of the troubles which indoor plants suffer with are directly traceable to the conditions which they have been subject to, and the gardener must be wholly responsible for them. There are some disastrous diseases, however, which greenhouse plants are affected with that cannot be controlled by any amount of skill in handling the crop without recourse is taken to radical preventive measures. Such is the case where the gardener has to contend with genuine parasites or with pathogenic organisms which will attack a healthy plant just as quickly and disastrously as a weak one. Such diseases are produced by the fungus Sclerotinia libertiana Fckl., which causes the drop in lettuce and the timber-rot in cucumbers; the rhizoctonia which affects lettuce and many other plants, and the Heterodera radicicola, Mull., a nematode worm that is known to affect 180 or more species of plants, and which is especially disastrous wherever it occurs in abundance to greenhouse cucumbers, tomatoes, muskmelons, violets, roses, cyclamens, etc. It is for the control of these disastrous organisms that the sterilization method is especially adapted, and which all other methods of treatment, except for nematode worms, fail. It is also applicable to the destruction of weed seeds, and the red spider and aphis in the soil are killed.

The application of chemical substances to the soil for the control of pathogenic organisms is not practicable except in some exceptional cases; neither is the fumigation method of much value, as gases are limited in their power of pene-

OKAYAMA PARK, ONE OF THE BEST EXAMPLES OF TYPICAL JAPANESE GARDENING.

trating the soils. In some cases freezing or drying the soil is effectual, but it is not easy to freeze soil in the greenhouse without removing it, and that method is too expensive, for at the present time it is far cheaper to sterilize soil than to renew it. The sterilization method is the most effectual and absolute method that can be applied in the treatment of pathogenic organisms. Where the pest is confined to the soil and does not disseminate by spores through the air it can be completely and absolutely eliminated.

The treatment of soil by heat, or sterilization, as it is called, has been carried on at the Hatch Experiment Station, Amherst, for some years, in connection with troublesome organisms which thrive in the soil and prevent the production of healthy crops. It should be borne in mind, however, that when we speak of sterilization of the soil we do not mean absolute sterilization, but what we actually accomplish is a sort of Pasteurization, or partial sterilization. In order to obtain absolute sterilization and maintain those conditions, we should have to make use of the methods employed by bacteriologists. Absolute sterilization we do not desire; and all that is necessary to accomplish is to destroy the obnoxious pests which cause damage to the crop. A uniform temperature of 180° Fahrenheit maintained for a short time would accomplish this, but in practice it is far better to exceed this temperature, in order to be on the safe side.

During the past year quite remarkable strides have been made in the practice of sterilizing soils. On account of the extensive use of the sterilization method upon a large plan by the most efficient and practical market gardeners the process has been made very much cheaper and quickened to a considerable degree. There have been numerous methods and appliances devised that are great improvements over old ones. In the past year the amount of soil sterilized can be intelligently estimated in acres rather than in square feet. At the present time whole ranges of greenhouses are being treated and the method has been employed out of doors to some extent.

The method of treating the soil by steam to a distance of a foot or more in depth has always appeared to us as the best one to be employed, and since the cost of such treatment has been greatly reduced of late there appears to be no longer any reason why it cannot be extensively employed. The practice of applying one or two inches of treated soil to the top of the bed, while giving good results, has its drawbacks because the process in order to be of any value has to be repeated every time a crop is planted. The cost of treating one foot or more of soil in badly infested houses proves an excellent financial investment; for example, some houses have had the drop in them to such an extent that fifty per cent of the plants would succumb and in some cases nearly the whole crop has been destroyed. In our own experimental house, which was purposely contaminated a few years ago, we have experienced a loss in some cases equal to about ninety-nine per cent. In a house containing 4,000 dozen plants at 50 cents per dozen the value of the crop would be $2,000, or at 25 cents per dozen $1,000. The loss of fifty per cent would reduce the value of the crop to $1,000 or $500 respectively. Such a loss is the more provoking inasmuch as the maximum amount of drop occurs about the time the plants are mature, and all the labor bestowed on the crop in transplanting, care given to the same, amount of heat utilized, and the valuable space which they have taken up is all for nothing. A house of this description was sterilized during the past winter at a cost of $100 and in examining this crop (which was one of the most perfect I have ever seen) there was only one case of disease in the whole house. There appears to be no reason why, if a house is once treated in a manner as thoroughly as this house was, another treatment would be necessary for some years, provided care is taken to prevent contamination from refuse material which contains the drop fungus. Even allowing a few contaminating areas to exist in the soil as a result of imperfect treatment it will probably be five years before the loss would again reach that amount where it would be necessary to treat the soil. It requires no argument to show that the expense of $100 for treatment in a house that would be worth $2,000 at 50 cents per dozen or even $1,000 at 25 cents per dozen is a good investment, even if the treatment has to be repeated each year; but on the basis of a five-year treatment, which is in our estimation all that is required, the investment is nearly five

times as good. The increased value of the soil and the possibility of having less weeds and aphis should also be taken into consideration in estimating the benefits derived from this method of treatment.

The methods employed for heating the soil have been either by the use of hot water or steam, with considerable variation in the mode of applying the latter. The hot-water method requires the treatment of the soil previous to putting in of each crop, as only a few inches of surface soil are sufficiently heated by this method to kill the mycelium of the drop.

The heating by steam is now done largely by perforated pipes and in some cases use is made of 2-inch porous tile, although this method is not so practicable. The various contrivances made out of perforated pipe, varying from one to three inches in diameter and usually placed from seven to twelve inches apart, are made up into frames from ten to twenty feet or more in length and into any width desired. The size and number of the perforations vary much in different appliances.

The methods generally adopted by lettuce growers in heating their soil is to place the sterilizer on the surface of the bed. If the bed is twenty feet wide then it would be most convenient to have the sterilizer ten feet wide and twenty or thirty feet long. This is placed midway in the bed and the soil to the depth of one foot or more is dug up on either side and thrown up on top of the sterilizer. The steam is then turned on and the soil heated. After sufficient steaming has taken place the pipes can be pulled out and made ready for the next treatment. The soil previously treated is covered up with old canvas and allowed to stand some hours, after which the top portion is shovelled back to where it was taken from. Not only is the one foot or fifteen inches of top soil heated, but the soil underneath the apparatus is equally well sterilized providing too much haste is not made in removing the treated soil.

From reliable estimates which we have been able to obtain from practical lettuce growers and others who have heated their soil, the cost including coal, labor, etc , but not the cost of tile or apparatus used, is as follows:

In a house 20x225 feet, one-third of which was treated at a time by steam passing through 2-inch tile placed eight inches below the surface and one foot apart, the cost was at the rate of $16 per 1,000 cubic feet. The estimated cost of removing the soil from a similar house to a depth of one foot and placing in new soil without carting the same was at the rate of $37.50 per 1,000 cubic feet.

Another house 40x500 feet was treated by steam passed through a 1-inch iron pipe with series of perforations six inches apart and three-sixteenths of an inch in diameter. The estimated cost for sterilizing 1,000 cubic feet, based upon the treatment of the whole house, was $8.33.

In another instance it took three days to treat a house 36x300, and from the estimated cost of labor, fuel, etc., the treatment was made at the rate of $5.92 per 1,000 cubic feet. We observed one test with a sterilizer in which 400 cubic feet of soil were heated at the rate of $2 per 1,000 cubic feet.

W. W. Rawson claims that it cost him $50 to sterilize a house 40x300 feet, which would be at the rate of about $4.16 per 1,000 cubic feet. This is undoubtedly a very fair estimate of what it costs to sterilize soil when undertaken on a large plan. When soil can be sterilized at $2 per 1,000 cubic feet, or even $5, there is no longer any question concerning the practical application of this method in greenhouses for the extermination of some of the worst enemies which interfere with the production of healthy and profitable crops. Even where the cumbersome tile method is employed the cost of sterilization is less than one-half what it costs to remove the old soil from a house and supply it with new.

Some market gardeners have practiced sterilization for three years, not wholly for the sole purpose of ridding the soil of certain disease-producing organisms, as that can be accomplished by one treatment when properly done, but largely for the purpose of increasing their crops. We have made many experiments with various crops wherein the effect of sterilization on the growth of plants was compared with the growth of the same species of plants in precisely similar earth not sterilized. The effect of sterilization is quite marked in such experiments.

JAMES SOUDEN.

One of our largest lettuce growers, who has observed the effect of sterilization on his own crops for three or four years, declares that he would rather have one inch of sterilized soil on his beds than any fertilizer which he has ever used.

A gain of thirty-three per cent in the growth of the crop is in itself worthy of consideration, so much so in fact that, as already stated, many gardeners practice sterilization for the production of larger crops. This means that a crop of lettuce when four weeks old is equal to one six weeks old as ordinarily grown, at least such are the results which we have obtained in our experiments, and lettuce growers have related similar experiences.

There are still opportunities for practical gardeners to improve the appliances for sterilization, which will render the operation more efficient and reduce its cost.

James Souden.

The popular gentleman whose portrait appears on this page is one of the most capable growers, not only in the northwest, but also in the country. Born at Aberdeen, Scotland, in 1864, he worked on a farm until he was eighteen years of age, when he took a place under John Proctor and Robert Agston, who had charge for Lord Henderson, whose establishment was the finest of private character in the vicinity of Aberdeen. He remained there until 1887, when he came to American, landing in New York but shortly finding his way to Minneapolis, where he went to work for C. A. Smith, having charge for more than five years, and in 1890 building a range of 25,000 square feet of glass for his employer. In 1892 Mr. Souden took charge of the L. L. May & Company range at St. Paul, continuing there until last year, when he was called upon to assume the management of the floral end of the big business of Wm. Donaldson & Company. He has about 60,000 feet of glass, having considerably enlarged the range last year, and grows a general stock, including Beauties, tea roses, bulbous stock, violets and so forth, for retail. He has full charge of the retail department in the store as well as of the producing end. His stock is always good and he does one of the largest businesses in the Twin Cities. Mr. Souden and Miss Murray, of Aberdeen, were married in 1887. They have four fine girls, the eldest 13 years of age.

A California Floral Design.

The accompanying illustration is from a photograph of one of a number of large and elaborate floral pieces made recently by the Shanahan Floral Company, of San Francisco, for the obsequies of a public man of that city. The cross was seven feet tall and the arm was three feet nine inches. Violets were used for the foundation, with Roman hyacinths, Harrisii lilies and adiantum.

GOLDEN GATE.

Lily Troubles in Philadelphia.

The men who grow plants and flowers have more or less trouble on their hands all the time and those whose specialty is Easter stock are pretty sure to lead a strenuous life for the two months prior to this annual festival. This is particularly true of the man who carrys a large stock of longiflorums, as each year seems to introduce some new problem to be solved, some difficulty which interferes more or less with their successful growth. This year the main trouble has been with what seemed to be a new and worthless variety which cropped out in large quanties among the other plants. This "bastard" lily as it is called by some, was not noticeable at first, as the bulbs came along fairly well together. Many were not noticed until after they had been potted, several together in the larger pots for specimens, when it was seen that some of the plants were not getting away as they should. They became stunted, the center leaves became weaker and began to twist up. They are coaxed along for a while and then, after saying a few complimentary things about his bulb man, the grower takes his loss and dumps the offenders.

Hearing of much dissatisfaction among the growers on account of this stranger, I visited George Anderson, who has for a long time been quite successful with this Easter favorite. Asked to give his opinion on the new variety he said: "I do not believe it is a new variety at all. I believe it to be a diseased multiflora caused from forcing bulbs that had not fully matured or ripened before they were dug out of the ground for shipment to this country. We have been forcing Japanese

longiflorums for a good while, getting the bulbs between the middle of September and the first of October. This year they arrived earlier in the month, delivered then probably on account of the early Easter. Many of the bulbs still retained the green stalk or stem of last season's growth and they were hard and plump, very nice looking to be sure, but I like to see them with the scales loose and yellow, showing that the bulbs have been allowed to mature in the ground before they were lifted. This is the secret of success in lily forcing; have the bulbs well ripened and there will not be half the trouble there is now. As to the mixture of the varieties, it seems impossible for the seedsmen to keep them straight and no matter how much caution is taken they will come mixed."

Here Mr. Anderson showed me the different varieties, selecting them by their foliage and pointing out their peculiarities of growth until I became fairly bewildered. There was the red-stemmed, with its very full growth of long, narrow leaves, called, I think, giganteum; the multiflora, with its free growth, the kind that is preferred by most growers. Then there was a broad-leaved kind, with a great quantity of leaves which look very strong and vigorous but which is said not to force well, that is, it cannot be driven like the multiflora. It has no name. Among other interesting things he mentioned was that Mr. Hahman, of Harrowgate, called to see him and stated that he had a double or split bulb in which one of the bulbs was all right, a good multiflora, while the other half was a good specimen of the diseased, or, as thought by some, the "bastard" sort. Mr. Anderson reasoned that one of the bulbs, being stronger, had matured, while the other had not, and the results were shown when they started to grow. Mr. Anderson threw out quite a good many of his stock, but as he always starts them in small pots until he is satisfied they are, or will make, desirable plants, his loss is reduced to a minimum. His stock now looks in very good condition and is in various stages of development, with buds from one half inch to three inches in length a the beginning of March.

J. W. Colflesh, his neighbor, has a nice lot coming along but has thrown out about twenty per cent on account of the disease. His idea of the trouble was the same as Mr. Anderson's, believing that the bulbs were received much too soon and were not fully matured.

"We never had this trouble before, at least not to any appreciable extent, and I believe the early arrival of the bulbs has all to do with it. I have my mind made up to one thing, and that is to give my bulb order next season conditionally on only paying for the multiflora which develop; if any other kind shows up it cannot get in the bill, as I shall only order multiflora."

W. K. Harris is thinking seriously of going out of the lily business, as the last few years he has had so much trouble with bad bulbs. His foreman, Mark Mills, says no matter who you get them from they cut the same caper. This year he threw out nearly half the bulbs he started on account of the disease, caused, he believes, by the bulbs being taken up entirely too soon.

Joseph Kift, of Westchester, Pa., received one shipment of lilies early in September which were planted at once. Another lot which were said to have just arrived from Japan were received and planted early in October and are now

SEVEN-FOOT CROSS BY THE SHANAHAN COMPANY, SAN FRANCISCO, CAL.

much the better looking lot, the plants being farther advanced and, while there are a few diseased ones showing, the proportion is nothing like as great as in the early shipment. These latter are all very backward; scarcely any of them will make Easter, while those that are not entirely worthless appear as if they will perhaps be in for Decoration day. Both stocks have been growing side by side and have received exactly the same treatment. The results here are greatly in favor of the better ripened bulbs.

Robert Craig says that he does not believe the story that someone has discovered a double crown bulb one-half of which produced a fine stem while the other half produced a diseased stem only one-fourth the height and on which no buds were set. He cannot understand how one-half the bulb should have the proper conditions to ripen it and for the other half the environment be so different as to produce an entirely worthless stem. He has thousands of double crown bulbs bought as multiflora and in all cases both shoots from the one bulb are either multiflora, which is easily recognized by its firm flower and superior height, or are the "bastard" variety, which is very short and which produces no good flowers.

Mr. Leonard, of the Model Farm, received a case of Japenese longiflorums from a grower who had a few too many. This was in November. This lot came

along nicely, with scarcely any trace of the disease, and are now fully as far advanced as his earlier planting, from which he had to throw away fully twenty per cent. The grower from whom he obtained his last case says he lost fully half of his, and yet this case from the same stock planted late turned out very satisfactory.

A word from the bulb importers. H. F. Michell says he believes the cause of the lily disease can be traced to the eagerness of everyone concerned to get the bulbs early in the fall. The florists keep asking the dealer how soon they can get their lily bulbs, and finally the growers are cabled, the bulbs are hurried along and immediately started forward without the necessary rest. It is singular, however, what difference there appears to be in the results with the various shipments of bulbs from the same lot in the hands of different growers. Mr. Michell says he has letters from some growers who forced lots of from 2,000 to 5,000 with most excellent results, never had them better, and so forth, while with others it was the very opposite. This certainly does not look as if the bulbs were at fault.

George C. Watson says it is too complex a question for him. "I have had theories, and thought I knew, but they have been knocked in the head so often that now I am free to confess I cannot express an opinion. I simply don't know." Mr. Clark, at Henry A. Dreer's, says: "We would all sleep better if the lilies were eliminated from our catalogues They cause us no end of anxiety and trouble. When they do well it is because they are grown right, but when failure comes it is always the bulbs and it is the importer who gets the blame. I believe it is this early chasing after early stock to meet competition that much of the trouble can be traced to. Out of six or eight florists in a town some will order from one firm and some from another. The stock of one firm is all delivered. Immediately letters are received by the other houses to send their bulbs at once. If not sent right away another letter follows; 'if I don't get my lilies by the fifteenth cancel the order and I will get them elsewhere.' So you see with the haste of the growers and the competition of the dealers to be first on the market, the quality or proper condition of the bulbs is lost sight of, and this, I think, has much to do with the trouble." K.

The Shamrock.

W. K. Harris has gone into the shamrock business with a vengeance, having devoted one of his largest houses entirely to its culture. The center table is filled with plants in his copyrighted pot or pan, the shape of a shamrock leaf. This is very pretty and will be very appropriate for dinner decorations wherever the "old sod" is reverenced. The small pots, 2½-inch, on the side benches can be sold cheap as souvenirs of "Paddy's" day, March 17. A large contract has been made with a department store which gives each of its customers on that day one as a souvenir. One of the curiosities in the house is a snake, which helps to keep down the snails, but he will have to go before the "seventeenth," as he cannot live where the shamrock grows. Mr. Harris reports large orders for this plant from other cities and thinks there will scarcely be enough to go around. K.

WITH THE GROWERS.

LAKEVIEW ROSE GARDENS, JAMESTOWN, N.Y.

On my first trip to Jamestown, N. Y., I took the Erie railroad from Buffalo and had a very pleasant ride through a beautiful rolling country. Arriving at Jamestown, I found a fine, growing city at the outlet of Lake Chautauqua. Here I took the trolley cars for the Lakeview Rose Gardens, situated in the eastern part of the city just outside of the limits, where I was taken in hand by C. H. Roney, the superintendent, who is the right man in the right place. He turned me over to the various department foremen.

At the first block I found Michael McCue in charge of ten houses filled with smilax, adiantum, Asparagus Sprengeri, Asparagus plumosus nanus, and a few other plants sitting along the edges of the benches, such as cyclamens. He keeps his houses in good trim, everything neatly tied up and no dead leaves showing.

Next I came to a block of houses under Gustave Dhalstorm, all given to Meteor roses, all fine looking plants, clean and the perfect picture of health. This block is composed of six wide houses 300 feet long. I could not walk down every path as I would never get through inspecting the place.

Charles Hennon has a house 300 feet long full of lilies in their various stages of development. Some were in flower and some with buds and some just creeping out of the pots. Next he has a large house full of hydrangeas, good strong plants with five or six branches coming on for Easter. Then there is a group of small houses of violets, eleven-foot houses 100 feet long, five of them, planted with Marie Louise and Lady H. Campbell.

James Lydon has charge of a block of carnation houses, ten of them, each 240 feet long. Each house has four beds. The varieties I first saw were Lawson, Marquis, Mrs. Joost, Prosperity, Roosevelt and Estelle. They made a fine show. Farther down I could see Morning Glory, Genevieve Lord, Genesee, Flora Hill and White Cloud, all doing well. As I advanced I found old Scott and Daybreak. They have many other varieties on trial, such as Queen Louise, Peru, Cressbrook and Mrs. Nelson. Everything is kept clean, under the stages as well as among the plants. Their cut is very large, and is carried up to the packing room three times a day.

The block of houses under the care of Fred. Gunton are old style, three-quarter span to the south, and three stages, with the north side a raised one. Here I passed from house to house, some in Brides, some in Bridesmaids and at the end ni Beauties. These plants are carried over stock but they are all doing nicely. Next summer they are to be taken out and the stages replaced with solid beds. When built these houses were twelve to sixteen feet apart, so this winter they have put new houses between them, making a very large block. A flight of stairs gives access to a house above the packing shed, where Golden Gate and Bridesmaid are doing well.

The new block of twelve houses, all in two departments, built in the latest improved style, using the Garland iron gutter, is very high, with plenty of room to walk under the gutter, and plenty of light. These are under the care of Clarance Gunton. He is growing Beauty, Liberty, Bridesmaid, Bride and Golden Gate. They are fine. At the division is a block of carnations which was planted late in solid beds, the same as the roses. They are making a brave show.

The large new propagating house has all modern improvements, with four beds 100 feet long. This house adjoins the boiler room. Here A. C. Wasson is in charge and, with his assistants, is filling up the house with rose cuttings and some general stock. One bed is devoted to lilies of the valley, put in at various times. There is another propagating house where nothing but carnations are rooted. This house will hold 150,000 cuttings and to meet requirements will have to be filled four or five times.

James Brooks has charge of the packing of plants, sees to the potting of all the cuttings and repotting of plants, also handling all the new stock as it comes in. Wm. Coyne is his right hand man. The packing room where the cut flowers are handled is in Mr. Roney's office, where he can keep his watchful eye on the work.

IN THE WORKSHOP OF M. RICE & CO., PHILADELPHIA, PA.

WM. K. HARRIS, HIS HOUSE OF SHAMROCKS AND HIS SHAMROCK POTS.

Frank Winson and his helpers do the work.

The place is heated by twelve steam boilers, and about thirty tons of coal are burned each day in winter. There is a good deal of water to be pumped and the water has to be pumped back to the boilers, as it is a low pressure system and the piping is all low, some of it underneath the stages and some along the walks. There is also a shop, with plenty of machinery to do most of their own work in carpentery, steam fitting and so forth.

The retail store, which is located on Main street near Third, is a model one, full of all the latest novelties in supplies and accessories. They keep up with Broadway style. W.

CARNATIONS.

CARNATIONS FOR SUMMER BLOOM.

ED. AM FLORIST:—Being a beginner at carnation growing, please to advise me if it is best to grow carnations in the field for summer cut flowers and rest or renew the soil in the benches. Can I buy plants ready to put out in the field to produce summer flowers? How large should they be? How often and with what should they be stimulated?

W. F. S.

Carnations for summer blooming had better be grown in the field. To have the best success one should have plants from 3-inch or 4 inch pots, with a number of branches well started by the time they are to be planted out. Such plants are pretty hard to buy but probably they can be secured through an advertisement. For outdoor blooming there is little danger of giving them too much in the way of manure, but if phosphates are used they should be applied very carefully, as a dry spell of weather with much phosphate in the soil will mean stunted and worse than starved plants. In some cases it is not necessary to renew the soil in the benches every season but it is always safer to have the old soil all taken out and fresh put in.

ALBERT M. HERR.

CARNATIONS IN MINNESOTA.

Having read with interest the great difference in the varieties of carnations, as grown by the best growers in the country, I take the pleasure of giving my experience in Minneapolis:

In white, Lorna is the leader, giving the largest percentage of high grade flowers, almost every bloom coming perfect, on very long stems. White Cloud with us is very free, but when we cut the flowers they have to be graded as No. 1, No. 2 and No. 3. On a general average they run about fifty per cent No. 1. If the weather is bright and clear, we get about thirty per cent No. 2 and twenty per cent No. 3. No. 2 we can sell over the counter. No. 3 we use for design work. Bon Homme Richard is very free, with small flowers on long, stiff stems. It will never amount to anything. Norway has been very disappointing. The growth is very strong, stems stiff, flowers with quite a little pink in them, and so far I have been unable to cut a perfect bloom but will try it one more year. Flora Hill I am going to discard altogether.

In pink we grow Mrs. Lawson, which is the most profitable carnation we have on the place. Just now the plants are in full crop and the blooms average three inches, with a beautiful color. The Marquis is grand; blooms about the same size as Lawson, but not as free a bloomer; sells a little better than the Lawson on account of its color and spicy odor. Guardian Angel is very free; flowers rather small to rank as a fancy, but on account of the fine stem and beautiful color, it is an easy seller. I consider it very profitable. Joost is very good in fall and spring. Sunbeam and Prolifica are no good around Minneapolis and St. Paul, and the same may be said of Nydia. We have still a few plants of Daybreak, but after the season is over, we are going to discard it altogether.

In red G. H. Crane has not done quite as well this season as last, but it is still very profitable. It has a good color and strong stiff stem. Red Mrs. Bradt is very good, large bright scarlet blossoms on a good stem. Planted rather close on the benches, I consider it a good fancy red. Next season I am going to try Palmer and Estelle. Both varieties seem to produce grand flowers of good shipping quality.

In the variegated class there are only two varieties that amount to anything with us. Prosperity, the largest carnation on the market, I am afraid is going to be a shy bloomer, and the color is against it. The early part of the season the color was just right. The blooms showed enough pink to make them attractive, but as the season has advanced, they have a little too much color in them. Mrs G. M. Bradt still leads in its class, but I notice that the demand for variegated varieties has decreased considerably.

JAMES SOUDEN.

SUCCESS WITH WHITE CLOUD.

ED. AM. FLORIST:—Having seen in your paper many comments unfavorable to White Cloud carnation, I wish to speak a word in its behalf. I planted sixty plants of it on a bench last August and

VIEW OF THE STORE OF M. RICE & CO., PHILADELPHIA, PA.

since then the cut has been: October, 110 blooms; November, 155; December, 380; January, 348, February, 359; total 1,352, or an average of twenty-two and a half blooms to a plant. The flowers have all been good, most of them on stems thirty inches long. I have syringed the plants but twice this winter, so it can be seen that red spider and thrip do not bother them when grown right. The night temperature has been 50° to 52° and 60° to 63° on dull days, with five degrees more when the sun was bright.

Millbrook, N. Y. ANDREW NICHOLLS.

Begonia Gloire de Lorraine.

This beautiful winter flowering plant appears to gain in strength from year to year. Certainly it has never been seen in England in such fine shape as during the past season. The plants exhibited at various meetings have surpassed anything that could be imagined when it was first introduced. It is well known that the variety is of French origin, but it may not be so well known that until re-introduced from England the French growers failed to grow it satisfactorily; in fact, it was condemned as useless. Now, however, it is one of the most popular plants in France. It is also finding much favor in Germany. It is a curious fact that the male flowers are produced successively on the same raceme and they seem inclined to go on indefinitely, but when a female flower is produced the same raceme does not extend any further. It is thus shown that the absence of female flowers accounts for the remarkable floriferousness of this beautiful winter flowering plant. A. H.

Some Desirable Paeonias.

Pæonia Pottsii alba, was the best pæonia shown before the Massachusetts Horticultural Society last spring. It is a very delicate flesh pink, tipped with carmine, and bleaches desirably. It is classed as an early sort and a free bloomer, the flowers averaging five inches in diameter at perfection, and two and one-half inches deep. The flowers show no seed center. The plant is about thirty inches high.

Pæonia Modele de Perfection was the favorite of the Philadelphia cut flower market last spring. It is a very attractive pink in color, with white reflections. The flower is very large, six inches in diameter at perfection, by four and one-half inches deep, and is globular, with large guard petals, the center petals crimped. It is an early sort and the plants average thirty-four inches high.

Pæonia Magnifica is a splendid mid-season sort, a deep rose-red, very double, the flower large, averaging five and one-half inches in diameter by two and one-half inches deep. There is no seed center. The plants are about thirty-six inches high.

The accompanying illustrations of the sorts described are from photographs taken last spring by Wm. A. Peterson.

Duplicate Names Among Paeonias.

So many people in different countries are raising pæonias that it is easy for two persons to choose the same name for different seedlings. For instance, Mrs. Pleas, a well known amateur in Indiana, developed a fine pæonia which she wanted to send out, and named it Admiral Dewey. But a pæonia of that name heads the list of the largest grower in the world, James Kelway, of England, and at my suggestion Mrs. Pleas changed the name of her variety to Gen. Lawton, and under that name it was purchased by P. S. Peterson & Son, of Chicago.

H. A. Terry, of Crescent, Ia., has named over ninety of his seedlings and put them on the market. Kelway has a Venus, and Mr. Terry gave one of his the same name, but I don't think it compares at all with Mr. Kelway's. The latter has also sent out the Prince of Wales, which is a flower of marvelous beauty, and Mr. Terry has one with that name. Each has a Princess of Wales. This is doubtless quite unintentional, but very annoying and misleading, for purchasers may have an eye on one and get another, quite an inferior sort.

We have too many named varieties of pæonias, about 2000 in all. An amateur will raise a lot of seedlings which look good to him and, although he does not know the best foreign and standard sorts, he plunges in and names a lot of his own productions of no special merit. If a person is going into the business he should have the best sorts in the world and if he can beat them with his seedlings, all right, those are the ones we want. But no new one should be named unless the introducer is sure he has something superior to existing sorts.

J. H. Rosenfield, of West Point, Neb., is a very careful grower and has given us some sorts of superior merit. Last year he had over 500 new ones in bloom. Near them were some of the finest of European introductions. He said to me, let us look these new ones over carefully to see if we can find anything to beat those we already have, but we found only two of especial merit. Mr. Rosenfield is an enthusiast and will soon have several thousand new ones to pick from.

When you can beat our two American sorts, Richards' Rubra Superba, and Perfection, send them on. In the white and gold get something ahead of Triumphe de Paris, J. Descaisne or Agnes Mary Kelway. In white beat Baroness Schroder and Festiva Maxima. In pink go ahead of Lady Bramwell and Humei. Beat these if you can, and we will all want them. C. S. HARRISON.

BENCH OF CARNATION ADONIS AT CRAIG & SON'S, PHILADELPHIA.

Propagating Norfolk Island Pine.

ED. AM. FLORIST:—Where can I obtain the seed of Araucaria excelsa? When is the proper time to plant them? What kind of treatment do they require? Which makes the better plants, seedlings or cuttings? If cuttings make better plants, where can I get the cuttings? What kind of soil do they require and at about what temperature should they be kept? How long does it take to root them?

M. C. W.

Seeds of Araucaria excelsa may be had from the leading seedsmen, and should be sown just as soon as received, the autumn being probably the safer season in which to buy them. This seed does not retain its vitality for any great length of time, but usually keeps better when allowed to remain in the cones until the time for sowing. Sow the seeds in boxes or flats filled with rather light soil, and place the flats in a partially shaded greenhouse with a temperature of 55°, where they will probably take several months to germinate.

Cuttings make much better plants than the seedlings, the latter being rather thin and poorly furnished at the bottom. The cuttings are gotten by taking off the tops of seedling plants or else by cutting back some old plants and then taking off the young shoots that form around the top of the cut-back plant. These young shoots are taken off with a heel of the old wood attached and are planted firmly in small pots without trimming off any of the leaves from the cutting. Some propagators use sand or sandy soil for the cuttings and some prefer cocoa fiber. The cuttings should be placed in a frame, so that the atmospheric moisture may be regulated, but they do not need a higher temperature than 55° to 60° and should not be allowed to get dry at any time, and should also be protected from the sun. Under such conditions and with proper attention araucaria cuttings are likely to root in about three months W. H. TAPLIN.

Peristrophe Speciosa.

The accompanying illustration shows a plant of Peristrophe (Justicia) speciosa in a 7 inch pot. It is a useful and interesting subject, both for the amateur and professional grower. Of easy culture, it

PÆONIA MAGNIFICA.

PÆONIA MODELE DE PERFECTION.

PÆONIA POTTSII ALBA.

THREE PÆONIAS USEFUL TO THE GROWERS FOR CUT FLOWERS.

adapts itself to varying conditions, flowering equally well in a cool house, palm house or the dwelling. Its natural and evenly branching habit gives it the appearance of having much care bestowed upon its training, and for the greenhouse or window it leaves little to be desired for lasting qualities and freedom of bloom. The flowers are dark pink, almost purple, and disposed in loose panicles on every growth, the season of flowering being from December to March.

The feature of its cultivation is rooting the cuttings in spring, potting into 3-inch pots and planting in the garden, about two feet apart, to be lifted in the autumn and potted into their flowering pots. But being a plant of rapid growth the final size desired must be determined at planting time. Practical experience has shown that spring planting will produce plants large enough for 12-inch or 14-inch pots, but for plants that can be accommodated in 6-inch or 7-inch pots planting out should be deferred until June or July. This, with an occasional hoeing, will give more satisfactory plants than can be secured by pot culture throughout.

The question of soil is not important but when established in their flowering pots, manure water is decidedly beneficial. This plant possesses many features of merit for the gardener or local florist, its appearance being at once striking and its management as described comparatively easy. FRANCIS CANNING.

Boston.

TRADE INACTIVE AND STREET MEN MOVING MUCH OF THE RECEIPTS.—GOOD PLANTS SHOWN AT HORTICULTURAL HALL.—NICE WINDOW DISPLAY.—VARIOUS DOINGS OF INTEREST.

A very dull and lifeless flower market exists here at the present time; prices have gone all to pieces and it is next to impossible to find a sale for much of the material which is coming in daily. The street men are happy in the opportunity to secure good stock at their own figures and in the warm weather which permits them to expose the goods on their stands, and if it were not for their help the returns for the growers would be far worse than they are. All kinds of material are abundant but bulbous stock and violets are the most heavily overstocked.

At Horticultural Hall, last Saturday James Garthley, gardener for H. H. Rogers, showed for the first time in this country Saxifraga sarmentosa tricolor superba and received therefor a silver medal. The plant resembles the well-

PERISTROPHE (JUSTICIA) SPECIOSA.

known S. sarmentosa in form but the foliage has a heavier, more wax-like texture and the coloring of red and white is exceedingly fine, giving the same effect as a tricolor geranium. J. E. Rothwell received a certificate of merit for Cypripedium Edmund Rothwell (C. Sallieri Hyeanum × C. Hookeræ) and H. H. Hunnewell a silver medal for Odontoglossum Midgleyanum.

Ed. McMulkin has been giving his fellow retail florists an object lesson in window display. Recently his immense show window has been a veritable "symphony in yellow." Daffodils, genistas, tulips, acacias, primroses, yellow pansies and carnations with a judicious use of ribbon and lace of corresponding color were made use of in large quantities, with gorgeous results.

At the meeting of the Horticultural Club last week Fred. L. Harris was elected an honorary member. Unfortunately, Mr. Harris is at present in very poor health and his condition for the past few weeks is quite serious.

The hearing before the legislative committee on metropolitan affairs, on the question of placing Boston Common and public grounds under the care of the park commission, will be held at the State House on March 24.

Fred. R. Mathison and W. J. Stewart started on Sunday for Asheville, N. C., to attend the annual meeting of the executive committee of the S. A. F.

The executive committee of the Association of New England Park Superintendents will meet at the Quincy House, Boston, on March 27.

New York.

MARKET IN A SADLY OVERLOADED STATE.—LITTLE RETAIL DEMAND AND GREEKS MASTERS OF THE SITUATION.—TROY FAMILY HAS A TRYING EXPERIENCE.—VARIOUS NOTES.

Things are in a most discouraging condition this week, from the standpoint of the grower and the wholesale dealer. The daily receipts in all lines of cut flowers are tremendous and the wholesalers are hard pressed to find an outlet for it. Those retailers who are so fortunate as to have any demand just now are in luck and should make money, for they can buy goods at any price they like to offer, and the Greeks are supremely happy, as they realize that they are practically masters of the situation. The quantity of violets coming in is unprecedented, amounting to many

hundreds of crates daily. The violet growers are belligerent regarding the prices realized but, nevertheless, are very generally inclined to ascertain the price of greenhouse glass with a view to further building this season.

J. H. Troy, with his wife and little boy, had a narrow escape on the night after the big snow storm while returning to New Rochelle from Mamaroneck, where they had been visiting some friends. Their sleigh became stuck in a drift and the horse broke away, leaving the party in the deep snow half a mile from the nearest house, to which Mr. Troy had to find his way for assistance. On his return the sleigh was found completely buried in the snow but Mrs. Troy and the little fellow were all right, although it took some days to recover from the effects of the exposure.

George Shubert is bringing in some pretty little novelties in the form of tiny ferns in 1 inch flower pots. They sell at sight.

Visitors: H. H. Battles, Philadelphia; Dr. Little, Glens Falls, and F. R. Mathison, Boston. The latter in company with Alex. Wallace and Secretary Stewart has gone to the S. A. F. executive meeting at Asheville.

Chicago.

MARKET EXPERIENCES A PRONOUNCED CHANGE FOR THE BETTER. — CUTS REDUCED AND DEMAND INCREASES. — STOCKS WELL CLEANED UP.—PROSPECTS FOR EASTER.—NOT VERY MANY FLOWERING PLANTS. — WHOLESALERS ORGANIZE.—THE GREEKS ARE RENTING STORES.—DOINGS OF THE GROWERS.—A VARIETY OF PERSONAL NOTES OF INTEREST.

With the change to cool weather stocks shortened up very considerably, the decrease in receipts being particularly noticeable in carnations. At the same time business received a lively impetus through the advent of Prince Henry in the west, and first-class stock has been well cleaned up this week. The shipping trade has been excellent and local business good, particularly on Monday, when Prince Henry decorations cleaned up everything which was to be found in the market. There were three very fine displays made for the royal visitor. One was at the First Regiment Armory for a reception and sangerfest on Monday evening. Mrs. Hilmers did the floral part of the work. For the great ball given at the Auditorium Monday evening, Hauswirth did the banquet room and Friedman the ball room. The work in the supper hall was particularly elaborate, and these may be classed as among the finest decorations ever put up in Chicago. Wienhoeber had the order for the Germania Club decoration for the luncheon given to Prince Henry on Tuesday afternoon and it was a most lavish and well executed affair. Wienhoeber also made the wreath which Prince Henry laid at the foot of the monument to Abraham Lincoln at Lincoln Park. During the Prince's visit to this city Mrs. Chas. Eickholt, of Galveston, Texas, whose brother is a member of the German Reichstag, was in town and sent the Prince a very handsome laurel wreath. The call for funeral flowers has also been heavy this week and has kept white stock in particularly good demand. There have been large receipts of bulbous material of all classes and Bridesmaid roses have been a little slow, also lower grade violets, but in general the week has seen a fair market for everything of good quality, the only material affording concern to the wholesalers being the cheaper carnations, which are in fair demand in outside cities but which are very difficult to ship satisfactorily.

The consensus of opinion is that there will be very good supplies for Easter, although of course it will be somewhat difficult to so distribute the stock that every one will get just what he wants unless orders are in early. There will be better supplies of carnations than in a number of years past and large quantities of bulbous stock. Tea roses promise to be in fair crop, but even now Beauties are under the demand and there will hardly be enough of them to meet requirements at Easter. The general report is that lilies will be a shortage, not only in Chicago but throughout the country. Sam Pearce is almost the only local grower who reports good success and such growers as Emil Buettner say that they think lilies ought to run easily 15 cents to 20 cents per white bud for what would be called good stock. In other respects the Easter price-lists are likely to follow very closely those of last year. There is no great variety in the plant stock available for Easter. There are not many lilies but plenty of azaleas, cinerarias, cyclamens and so forth and a few hydrangeas, Ramblers and rhododendrons.

The Chicago Wholesale Cut Flower Association was regularly organized last Tuesday afternoon by the election of F. F. Benthey, chairman; John P. Risch, secretary, and E. C. Amling, treasurer. E. B. Pieser and Leonard Kill were appointed to secure a place for the meetings, which will be held regularly every Tuesday afternoon, until further notice. Practically all of the wholesalers are included and many plans are under consideration for the advancement of the interests of the producing end of the business. There are many points upon which concerted action will redound to the profit of the grower and the selling agent and these matters it is proposed to consider in this new organization.

The street fakirs are being rigorously excluded from the streets but a great many of them have already secured locations where they can do business. Several of them have rented very nice stores on short time leases and are handling quite a bit of stock, but in general they want better goods than they handled from their sidewalk baskets.

Hugh McMichael, who has been grower at the Morton Grove Greenhouses for some time, is en route to Scotland for a three months' visit. He has made a contract with Weiland & Risch to return to Chicago June 1 and take charge of the rose growing department of their business. He is one of the best growers for the Chicago market.

Benthey & Co. are at work with the material for their new greenhouses at New Castle. They propose to rush the building as soon as they can get into the ground and have the new houses planted with Beauties early in May.

Kennicott Bros. Company sold the United States government a large invoice of violet plants this week for shipment to the Agricultural Department's violet experiment farm near Washington.

Bassett & Washburn say there is a constantly growing demand for Prosperity. It is a splendid shipper. They are selling it now at 8 cents in comparison with Mrs. Lawson at 3 cents.

Jules Tetlow, gardener at the Douglas Monument Park for many years, died February 28.

The Guardian Angel Orphan Asylum is building five sections of the Dietsch patent short-roof construction, each house being 280 feet long.

O. F. Kohl, H. C. Kohl and M. H. Seely have incorporated to do business and give information with regard to freight rates.

Mr. and Mrs. O. P. Bassett are expected home from Palm Beach, Florida, early next week.

John Degan, of the McKellar & Winterson Company, is in New York this week.

There is a fine display of cinerarias at the Lincoln Park conservatories.

Visitors: Wm. Dittman, New Castle, Ind.; E. F. Lempke, St. Paul, Minn.

Philadelphia.

CLUB DISCUSSES THE INTRODUCTION OF NEW ROSES.—THE DIFFICULTIES AND THE ETHICS. — GROWERS SAY OPERATION IS EXPENSIVE.—BUSINESS IS POOR BECAUSE OF UNFAVORABLE WEATHER.—BUYERS MAKE PRICES.—VARIOUS NOTES.

The committee on essays is to be congratulated for the treat with which they served the club at its March meeting, last Tuesday night. In answer to their request John May was present with a vase of his beautiful new rose, Mrs. Oliver Ames, and very valuable papers were sent by Messrs. E. G. Hill, Ernst Asmus and Alexander Scott, for which they received the thanks of the club. The subject was: "Which is the best way to disseminate a new rose that is likely to prove valuable for cut flowers in the winter season?" Mr. May spoke of the expense and difficulties that confronted the introducer of a new variety. At least one large house must be filled with the plants to show what it will do and to provide a good lot of cut flowers for exhibition purposes. This has to be run at a loss for one or two years, as if the roses are sold they can be propagated. It should have all the newspaper notoriety it can get. When the time advertised for sending it out arrives a large stock of young plants up to the standard of other kinds should be ready, as nothing is so disappointing to prospective buyers as to receive poor stock or be put off from time to time with excuses.

Robert Craig spoke of the introduction of the American Beauty. He said its history was like a romance. A few men went down to Washington in answer to an invitation from Mr. Fields, accompanied by a few flowers, and were so much pleased with the rose that they bought all the stock at once. In discussing the papers of Messrs. Hill, Asmus and Scott the idea of protecting the introducer of a new variety by some sort of legislation was favorably thought of, if it is feasible. Mr. Battles thought that a new rose could be registered with the secretary of the national society and members of the same held to their honor not to offer it for sale for a specified time, or if so to be read out of the society. Mr. Craig liked Mr. Battles' idea and he referred to the moral sentiment which became an unwritten law and thought a plan might be perfected that would be effective. Mr Burfee sent a telegram which read: "You are holding a symposium which means feast, while to send out a new rose means famine." It was agreed by those present that it was a well spent evening; may there be many more.

Business has been very poor the past week, caused mainly by the weather, which has been wretched. Nearly all flowers are now held at buyers' prices.

Special lots of flowers have been sold at very low prices, such as $10 per thousand for daffodils. Roses are plentiful, extra Beauties going at $6 per dozen and select teas at $10 per hundred. Carnations hold up well, $1.50 to $4 being the price. Violets, best doubles, are 50 cents, sweet peas $1 to $1.50 per hundred; lily of the valley is $2 to $4, daffodils $2 to $3 and tulips $3 to $4.

B. Eschner, of M. Rice & Company, who was called home on account of the death of Mr. Rice's mother, is off on his route again. He reports a good trade.

Jacob Becker, who has been very ill, is now, we are glad to say, on the road to recovery. K.

Cleveland.

TRADE SHOWS AN IMPROVEMENT OVER PRECEDING WEEK. — STOCK SHORTENS UP.—A VIOLENT WIND STORM —STOCK IN GOOD SHAPE FOR EASTER.—JOTTINGS.

Business for the past week has shown a decided improvement over the previous one. Several large funerals have called for a good deal of floral work and colder weather has set in, which will have a tendency to shorten supplies. Roses and bulbous stock have been a decided drug on the market. Carnations were not quite so bad. A violent wind storm passed over Cleveland on the morning of February 27, doing considerable damage to the trees in the parks and some damage to greenhouse property, quite a number having glass blown out and in some cases ventilators uplifted and turned over. Those on the East End suffered most, the west siders not catching the full violence of the storm. The show window of Smith & Fetters' store was broken and a show case damaged. The contents of the store did not suffer to any extent.

Adam Graham has a fine lot of hybrid roses which will be about right for Easter. He grows quite a variety of the old stand-bys, such as Baroness Rothschild, Bonstetten; Eugene Furst, Brunner, Magna Charta and a number of other good sorts, including a selection of the hardy tea varieties. The Magna Charta will average from twelve to twenty flowers per plant. His loss is about forty per cent in lilies. The bedding stock looks fine, house after house of geraniums in 3-inch pots in the pink of condition. It was quite a treat to hear an impromptu speech by the junior member of the firm, A. H. Graham, on the divergence of methods as applied to floriculture at the present time. It will be in order to endeavor to have him exploit his views in the shape of an eassy before the club in the near future.

A call upon a few of the growers found things in a fairly satisfactory shape for Easter. Rambler roses seem to take the lead as an Easter plant, nearly every grower having a bunch of more or less magnitude, all in good shape and just right for Easter. The same cannot be said of lilies, which, from present indications, promise to be a scarce commodity. The miserable grade of bulbs is in nine cases out of ten to blame. It is very provoking when time and space are given to an article which turns out a fizzle in the end.

Casper Aul has the best grown cinerarias I have seen for some time, nice stocky plants covered with flowers. His stock of azaleas for Easter is good. Much space is devoted to bedding stock, which is in good shape. Mr. Aul is thinking seriously of adding to his glass area and installing a steam heating plant.

G. M. Naumann is cutting some extra fine Princess of Wales violets, which so far have found a ready market. He grows quite a variety of pot roses, which are in fine shape and will be all right for Easter. Some good spiræas were in evidence.

Mrs. S. E. Lyman, of Coe Ridge, O., owner of the Essex Greenhouses, met with a serious accident last week. While ascending the steps to her house she slipped and fell, breaking her arm and receiving severe internal injuries

S. N. Pentecost has a nice lot of Ramblers, well trained and well flowered. He, in common with the rest, has good cause to "kick" over the lily trouble.

Herman A. Hart was confined to the house for the whole week following his trip to the carnation convention.

Visitors: Robt. George, Painesville, O.; Ed. Fancourt, representing S. S. Pennock, Philadelphia, Pa. ECHO.

Indianapolis.

SOCIETY HOLDS LIVELY MEETING.—DISCUSSIONS OF THE CARNATION SHOW.—A BALANCE LEFT IN THE TREASURY.—OTHER NOTES OF INTEREST.

A fair number assembled at a very early hour for the meeting of the State Florists' Society, held March 4. The "boys" evidently turned up so early to discuss greenhouse building with their friends. Much interest was taken by all present. The meeting opened with a report by Henry Rieman, chairman of the finance committee in charge of the carnation convention matters. Mr. Rieman in former meetings wore the worried expression of the man who has to make both ends meet, but this time he was beaming with satisfaction and said: "Gentlemen, I have the pleasure to announce that we were able to carry out our programme to a dot and without a single hitch; also that we have quite a balance on hand for a future occasion." The details of the report were drowned by the boys' cheering. After the report was heard President Haugh discharged the various committees, thanking them for their good work

A. Baur read a paper on the carnation exhibit. He said that he considered the exhibition the finest ever held in the world, and he says it swelled his Hoosier pride to notice that one-third at least of the varieties originated in this state. The progress made in carnation culture, the speaker remarked, was made in regard to stem, habit and form, rather than in size of flower. Three and one-half inch carnations were known to exist ten years ago as well as to-day. The show he thinks was a grand thing for the florist trade, as many of the thousands of visitors we had at the hall bought their first flowers there. Mr. Baur suggested that smoking should be prohibited in the exhibition hall as well as in the packing place. The speaker remarked that smoke in a surprisingly short time will kill the fragrance of a flower. A bunch of very fragrant flowers which left his place in a very few hours had changed their fragrance for the odor of smoke in the exhibition hall.

In the discussion which followed, Messrs. Haugh and Hartje contradicted him in regard to tobacco smoke, claiming that the fragrance very soon leaves flowers after they are cut, and that a man, after being at the exhibition for any length of time, will become insensible to the fragrance of the flowers. The discussion showed that the great Lawson is gaining in popularity.

The secretary was instructed to express the thanks of the association to a number of contributors for the kind support they gave the carnation show.

Mrs. Larsen has sold her place, and it is now rented by a Mr. Edwards.

John Heidenreich is in the market for a new boiler.

Irvin Bertermann has been on the sick list. H. J.

Meetings of Florists' Clubs.

The accompanying list gives the cities in which there are active florists' clubs. Following the name of the club is the place of meeting, the day of meeting, the hour and the name and address of the secretary:

BALTIMORE, MD.—Gardeners' Club of Baltimore, Royal Arcanum building, 18 W. Saratoga street. Second and fourth Mondays of each month, at 8 p. m. John J. Perry, Sec'y, Gay and Eager streets.

BOSTON, MASS.—Gardeners' and Florists' Club of Boston, Horticultural Hall. Meets second Tuesday of each month. W. E. Fischer, Sec'y, 18 Union Terrace, Jamaica Plain, Mass.

BROCKTON, MASS.—Brockton Gardeners' and Florists' Club, store of W. W. Hathaway, Times Building. First and third Tuesday of each month, at 8 p. m. W. W. Hathaway, Sec'y, Brockton, Mass.

BUFFALO, N. Y.—Buffalo Florists' Club, 481 Washington street. Second Wednesday of each month, at 8 p. m. Wm. Legg, Sec'y, 1440 Delaware avenue, Buffalo.

CHICAGO, ILL.—Chicago Florists' Club, Handel Hall, 40 Randolph street. Second and fourth Wednesday of each month, at 8 p m. George Wienhoeber, Sec'y, 413 Elm street, Chicago.

CINCINNATI, O.—Cincinnati Florists' Society, Jabez Elliott Flower Market. Second Saturday of each month, at 8 p. m. Geo. S. Bartlett, Sec'y, 113 East Second street.

CLEVELAND, O.—Cleveland Florists' Club, Progress Hall, 244 Detroit street. Second and fourth Mondays of each month, at 8 p. m. Isaac Kennedy, Sec'y, Woodcliffe, Lake avenue, Cleveland,

DENVER, COL.—Denver Floral Club, 323 Charles Block. Second and fourth Friday in each month, at 8 p. m. F. T. Rushmore, Sec'y, 2316 Franklin street.

DES MOINES, IA.—Des Moines Florists' Club, at various florists' establishments. Last Monday in each month, at 8 p. m. J. T. D. Fulmer, Sec'y 702 Walnut street, Des Moines.

DETROIT, MICH.—Detroit Florists' Club, Cowie Building, Farran and Gratiot avenue. First and third Wednesday of each month, at 8 p. m. J. F Sullivan, Sec'y, 214 Woodward avenue.

INDIANAPOLIS, IND.—State Florists' Association of Indiana, Commercial Club rooms, Indianapolis. First Tuesday of each month, at 8 p. m. R. A. McKeand, Sec'y, Garfield Park, Indianapolis.

MILWAUKEE, WIS.—Milwaukee Florists' Bowling Club, Plankinton House. Thursday evenings, at 8 p. m. C. C. Pollworth, Sec'y, 137 Oneida street.

NEW YORK, N. Y.—New York Florists' Club, Elk's Hall, 19 West Twenty-seventh street. Second Monday of each month, at 7:30 p. m. John Young, Sec'y, 51 West Twenty-eighth street, New York.

OMAHA, NEB.—Nebraska and Iowa Florists' Society, Fuller's Hall, Fourteenth and Douglas streets. Second Thursday in each month at 8 p. m. Louis Henderson, Sec'y, 1519 Farnam street, Omaha.

PHILADELPHIA, PA.—Florists' Club of Philadelphia, Horticultural Hall, Broad street above Spruce. First Tuesday of each month, at 8 p. m. Edwin Lonsdale, Sec'y, Wyndmoor, Philadelphia, Pa.

PITTSBURG, PA.—Pittsburg and Allegheny Florists' and Gardeners' Club, at rooms of Pittsburg Cut Flower Co., 504 Liberty street. Second Thursday of each month, at 8 p. m. T. P. Langhans, Sec'y, 504 Liberty street, Pittsburg.

PROVIDENCE, R. I.—Florists' and Gardener's Club of Rhode Island. 96 Westminster street, Providence. Second Thursday in each month, at 8 p. m. Alexander Rennie, Sec'y, 41 Washington street, Providence.

RICHMOND, IND.—Richmond Florists' Club, Commercial Club rooms. First and third Fridays of each month. H. C. Chessmann, Sec'y.

ST. LOUIS, MO.—St. Louis Florists' Club, Odd Fellows Hall No. 2, Ninth and Olive streets. Second Thursday of each month, at 3 p. m. Emil Schray, Sec'y, 4101 Pennsylvania avenue, St. Louis.

TORONTO, ONT.—Toronto Gardeners' and Florists' Association, St. George's Hall, Elm street. Third Tuesday of each month, at 8 p. m. W. C. Jay, Sec'y, 438 Spadina avenue.

UTICA N. Y.—Utica Florists' Club, 183 Genesee street. First Thursday of each month, at 8 p. m. J. C. Spencer, secretary.

WEST HOBOKEN, N. J.—North Hudson Florists' Club, store of H. C. Steinhoff, Hudson boulevard, West Hoboken. First Tuesday of each month, at 8 p. m. Geo. F. Kogge Sec'y 616 Washington street, Hoboken.

THE AMERICAN FLORIST

SEVENTEENTH YEAR.

Subscription, $1.00 a year. To Europe, $2.00. Subscriptions accepted only from those in the trade.

Advertisements on all except cover pages, 10 Cents a Line, Agate; $1.00 per inch. Cash with Order.

No Special Position Guaranteed.

Discounts are allowed, **only on consecutive insertions**, as follows—6 times, 5 per cent; 13 times 10 per cent; 26 times, 20 per cent; 52 times, 30 per cent.

cover space sold only on yearly contract at $1.00 per inch, net, in the case of the two front pages, regular discounts applying only to the back pages.

The Advertising Department of the AMERICAN FLORIST is for Florists, Seedsmen and Nurserymen and dealers in wares pertaining to those lines *only*.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Wednesday to secure insertion in the issue for the following Saturday. Address

AMERICAN FLORIST CO., Chicago.

THE Lenten season appears to be making small impression on the cut flower trade.

THE winter resorts of Florida are to the Philadelphia flower market what New Orleans is to Chicago.

OUR annual Special Spring Number will be issued next week. It will be a particularly strong advertising medium. Let us have your "copy" early.

IT may not be amiss to mention that the amateur floriculturist would achieve better results did he not exhaust all his enthusiasm in buying the seeds.

Much Practical Help.

ED. AM. FLORIST:—Enclosed is our renewal of subscription. We simply could not do without your paper, finding in it so many helpful articles and getting so much practical information from each number. CLOVERLEAF GREENHOUSES.
Cheshire, Conn.

American Carnation Society.

DEPARTMENT OF REGISTRATION.

Frederick A. Blake, Rochdale, Mass., registers Bonnie Bride, a pure white of good size, form and calyx.

G. M. Naumann, Cleveland, registers Louise Naumann, a deep pink similar in color to its parent, Tidal Wave. It is the result of a cross between Hill, Scott and Tidal Wave, has never bursted a calyx, is a continuous, early and free bloomer, making no surplus growth and is a clean healthy grower.

ALBERT M. HERR, Sec'y.

Most Economical Fuel.

ED. AM. FLORIST:—Being located in Wisconsin, which is the cheaper, hard coal at $7 a ton or soft coal at $5, to heat a greenhouse 16x60 with hot water? How much soft coal will it take to produce the heat of a ton of hard coal?
W. L. S.

For a small plant it will always be most satisfactory if hard coal is used, and even though the house were several times as large hard coal would be found worth twice as much as a good grade of soft coal, after making allowance for the increased care needed by it, to say nothing of the less satisfactory results. Under large boilers, some of the better grades of soft coal will give nearly if not quite as good results as hard coal, so far as the number of pounds of steam per pound of coal are concerned.
L. R. TAFT.

Most Economical Steam Pressure.

ED. AM. FLORIST:—In heating greenhouses with steam which is preferable, high pressure or low pressure boiler? Would the grading of the pipes be the same in either case? J. E. M.

It is always best to carry the steam under low pressure in the coils, and where the boiler is small it will be best to have only a low boiler pressure. In large boilers, and especially if there are a number of houses to be heated, it will give better results if the boiler pressure is from forty to sixty pounds, with the pressure in the coils at five pounds, more or less. The arrangement of the pipes would be the same in both cases. L. R. TAFT.

Floriculture at St. Louis.

Frederic W. Taylor, Acting Chief of the Department of Horticulture of the Louisiana Purchase Exposition, is addressing the following letter to all florists:

This Department desires to hear from the florists of the country as to what they wish to to individually in the way of exhibits at the St. Louis World's Fair. One special reason why this information is necessary at this time is that the proper request for the necessary amount of space may be made and the preliminary plans arranged so that as nearly as possible all exhibitors may have just what they wish in the way of area and location. If you have your mind made up as to what you desire doing will you kindly fill out the application blank I am sending you returning to me at once. Should you not have your mind made up on the subject, will you not write me stating in an entirely informal way what you would do should all the conditions be favorable.

I think that it is freely admitted that one of the greatest attractions of the Pan-American Exposition was its outside flower show. It seems to me entirely reasonable to feel that the best thing ever done in the world should be worked out along that line of exhibits in St. Louis. Will you do your part toward this by favoring this office with an early reply indicating not only what you would like to do if conditions are favorable, but what may occur to you as improvements which might be made in that feature.

Forcing for Easter Bloom.

ED. AM. FLORIST:—Last fall I bought some rhododendrons of the forcing varieties. I have them in a cold frame outside, well set with buds. When should they be brought into the greenhouse to bloom for Easter, and at what temperature should they be kept? I also have some Azalea Mollis which I should like to flower for Easter. How should I handle them? E. E.

The time is rather short for forcing rhododendrons for Easter, and it is to be hoped that "E. E." will have brought the plants in question into heat before this query appears in print. Five to six weeks is not too much time to allow for forcing rhododendrons, the flowers having more substance and consequently lasting much better when the plants have not been forced too hard. But under the circumstances the best thing to do would be to place the plants in a light greenhouse, where a night temperature of 60° to 65° is maintained, and to syringe them thoroughly twice a day until the buds show color. This is rather a high temperature for rhododendrons of the hardy section and better results may be expected when the plants have been allowed a longer time in a temperature of 50° to 55°. Azalea Mollis does not require so long a period of forcing to bring them into flower, and it is quite likely that these may be brought in satisfactorily. A night temperature of 60° and similar treatment in regard to syringing to that suggested for the rhododendrons ought to bring the azales on fast enough to allow a few days in a cold house to harden them off before Easter.
W. H. TAPLIN.

Best Early and Late Chrysanthemums.

ED. AM. FLORIST:—Please name the ten best early blooming chrysanthemums of the various colors, also five to ten of the best late bloomers. C. W. E.

For the best ten earlies I would select the following: Lady Fitzwygram, white; Marquis de Montmort, pink; Yellow Fitzwygram, yellow; Monrovia, yellow; Ivory, white; Pink Ivory, pink; Glory of Pacific, pink; Soleil d' Octobre, yellow; Yellow Queen, yellow, and Robert Halliday. The first four are extra early. The best late bloomers are Mrs. Jerome Jones, Yanoma and W. H. Chadwick, white; Mrs. S. T. Murdock, Superba and Lavender Queen, pink; Yellow Jones, Golden Wedding and W. H. Lincoln, yellow; Intensity, crimson. C. W. JOHNSON.

To Burn Texas Oil.

ED. AM. FLORIST:—I am contemplating the use of oil for fuel, under an eighty-five horse power steam boiler twenty feet long, four feet in diameter. What will be the cost of equipping the boiler for oil? Coal is $3 per ton and very poor. Will there be an economy in the use of oil in New Mexico. I am heating two houses 20x100 and one 20x40, ten feet to ridge. There is 1400 feet of 1¼-inch pipe in the large houses and 120 feet of 2-inch pipe in the small house. Fuel is at present costing $20 per month on the average. J. S. B.

The cost need not be large, being merely for a tank for storing the oil, piping and valves for carrying oil and steam to be burned and the burner itself. If some of the more simple burners are used and the tank holds no more than five barrels the cost should not be more than $25. The relative value of the oil and coal would be determined by the cost of the oil and the quality of the coal. Oil at 75 cents per barrel is as cheap as a good grade of coal at $3 per ton. If the statement is understood there are less than 700 square feet of radiation in the three houses. For this a fifteen horse-power boiler would be ample, and where fuel is expensive the cost of a small boiler would soon be repaid by the saving in fuel as compared with the expense of running an eighty-five horse-power boiler. Considering the amount of radiation in the houses, the fuel bill is high.
L. R. TAFT.

American Beauty and Robert Scott.

ED. AM. FLORIST:—I have a bench of Robert Scott roses that have not made much growth since the plants were benched in September. The soil was composted some time before, and was composed of eight parts sod, four parts cow manure and one part sand and lime. I have strived to keep the day temperature about 70° to 75° and at night 60° to 65°. The foliage is apparently healthy and of good color. Please advise me what to do in order to get good growth and bloom. All the other roses in the same house are doing well, with the exception of American Beauty. The latter are sending up long shoots of nearly all blind wood and produce no blooms. How can this be overcome? Any information on this subject through your paper will be favorably accepted.
SUBSCRIBER.

To grow Robert Scott successfully with a night temperature of 60° to 65° is, I think, out of the question. We are growing several benches of it and find 58° at

night the most heat we can afford to give it. The greatest trouble with this beautiful rose is that it will persist in producing buds on every shoot, no matter how small or weak it may be, and the only way to get a fair length of stem to the flowers is to pick off all the buds from the short stems and induce them to make a second growth from where the bud is pinched out. Robert Scott will be more appreciated as a perpetual summer blooming variety than for forcing in winter.

Regarding the American Beauty producing very long shoots nearly all blind, this may be expected from such high night temperature. Reduce this to a maximum of 60° at night and give all the air reasonable during the day to harden the growths a little and as the sun gains power they will set buds more freely.

JOHN N. MAY.

OBITUARY.

THOMAS WELFER.

Thomas Welfer, Sr., of Pittsburg, aged 72, died February 24, after an illness of three months. He was born in Germany, and came to this country fifty-five years ago, settling in Harrisburg. From there he moved to Pittsburg in 1870, and since that time had been in the florist business. He is survived by Mrs. Welfer, five sons, George, Thomas, William, John and Frank—and three daughters—Miss Kate, Mrs. William Hasley and Mrs. John Sutch.

Catalogues Received.

The Goulds Manufacturing Company, Seneca Falls, N. Y., sprayers and pumps; D. M. Andrews, Boulder, Col., wild flowers; The Acme Chemical Company, Ltd., Tonbridge, Lancashire, England, weed killer; Geo. C. Watson, Philadelphia, seeds; W. Atlee Burpee & Co., Philadelphia, prize supplement; George B. Moulder, Smith's Grove, Ky., water lilies; Rennie & Pino, Providence, R. I., wholesale and retail seeds; Wilhelm Pfitzer, Stuttgart, Germany, seeds and plants; American Blower Company, Detroit, Mich., steam traps; Texas Seed and Floral Company, Dallas, Texas, seeds, plants and bulbs; The Storrs & Harrison Company, Painesville, O., seeds, plants and trees; John H. Sievers & Co., San Francisco, Cal., carnations; John N. May, Summit, N. J., plants; Frederick W. Kelsey, New York, trees and shrubs; Webster's Nursery, Centralia, Ill., trees, plants, seeds, etc.; J. D. Thompson Carnation Co., Joliet, Ill., carnations; Jno. D. SITUATION WANTED By sober industrious young man, 28 years of age; married; 12 years' experience in cut flowers, ferns, palms and general stock. Best of references. Northern states preferred. J A, care American Florist.

SITUATION WANTED—By practical florist and gardener, competent to take charge of gentleman's country place; greenhouses, fruits, vegetables etc. Eight years on last place; good reference. German; married. GARDENER, Box 171, Attica, N. Y.

SITUATION WANTED—As foreman by thoroughly practical florist. Good decorator, designer, etc. Grower of No. 1 roses, carnations and 'mums. First-class commercial or private position. Good wages expected. Address G. FOREMAN, care P. O., Canton, O.

SITUATION WANTED As manager or foreman in an up-to-date place, middle age, married, A. No 1 grower of roses and general stock. The carnation blooms which I grew this season measured from 3 to 3½ inches in diameter; good propagator, designer and decorator, in fact well up in all branches. Reason for change, place is to be sold. Reference first-class. State wages. Address B A, care American Florist.

WANTED—Second-hand glass, suitable for sash, 10 inches between bars. W. P. RANSON, Junction City, Kan.

WANTED—One or two good makers-up, either male or female. Address AMERICAN ROSE CO., Washington, D. C.

WANTED Single, experienced young man to grow greenhouse plants. Wages $35 00 and board. T. LEE, Del Monte, Cal.

WANTED—A young man with some experience in greenhouse work. State wages with board. M. I. O'BRIEN, Sharon, Pa.

WANTED—Young man with some knowledge of rose growing and greenhouse work. State wages wanted with board. R, care Am. Florist.

WANTED—First-class decorator and designer; must be of gentlemanly appearance and good address. C. A. SAMUELSON, 2129 Michigan Ave., Chicago.

WANTED—Good truck gardener; married man preferred; permanent place for good man. Give references when writing. Address FORREST'S GARDEN, Washington, Pa.

WANTED—Two experienced clerks for seed store. Must be good counter men. Send references stating salary expected and full particulars. B, care American Florist.

WANTED—Young man with some experience for general greenhouse work, commercial place. State age, experience, where last employed and wages per month with board. Address, GEO. S. BELDING, Middletown, N. Y.

WANTED—A man who understands carnations, 'mums and general greenhouse work. State particulars and wages expected without board. N. ZWEIFEL, 14th St., and Groeling Ave., Milwaukee, Wis.

WANTED—Exceptionally expert rose grower for large private establishment. Only those of highest reputation and best references from noted rose growers need apply. State wages required. W H, care American Florist.

WANTED—Single man who understands growing vegetables under glass and out-doors: one with some knowledge of growing small fruits preferred. State age, experience and wages expected with board and lodging. J. W. THOMPSON Mt. Pleasant, Iowa.

WANTED—Young man with some experience in growing general stock, such as roses, carnations, geraniums, etc. Growing town and business and proportionate chance for advancement. Want a bright, ambitious young man, willing to work. Give experience and salary expected. Address ILLINOIS GROWER, care American Florist, Chicago.

FOR SALE OR RENT—Greenhouse and dwelling in Pittsfield, Ill., (only greenhouse in Pike Co.) Price $1,500. Address GEO. HANSEN, Springfield, Ill.

FOR SALE—Dwelling and greenhouses (no stock), centrally located in city of 4,500. Long established, paying business. No competition; 3,200 feet of glass. Cause, death of owner. MRS. MARY BEZNER, Ex., Jerseyville, Ill.

FOR SALE Fine florist and garden business; good running order; 8,000 feet of glass well stocked; 10 acres best soil. Live town of 13,000. Fuel cheap, surrounded by mining towns. Good reason for selling. Full particulars by mail. PITTSBURG FLORAL CO., Pittsburg, Kan.

FOR SALE—In Ravenswood, Chicago, fine plant of greenhouses, 20,000 feet of glass, good house, 6 rooms and bathroom. All in good running order. Within one block of three lines of electric cars. A bargain. Address CHAS. E. NASLUND, 1829 Lincoln Av., Chicago.

FOR SALE—At a bargain. 9 greenhouses, well stocked with roses, carnations, lilies, palms, ferns and general stock for spring sales. Office, work shed, steam heat; have block of land, 8-room house, barn; 13 blocks from business center; street cars pass the door. Address MRS. GEO. WALDBAUER, 1317 N. Michigan Ave., Saginaw City, Mich.

NOTICE. I have 4 500 square feet of glass; this city needs 50,000 square feet of glass; the trade has outgrown my capacity for handling it, and I am going to retire. Any party or parties who are desirous of enlarging the business and take it up where I leave off, I will give them all information needed. None but parties meaning business need answer.

W. J. MILLER, 403 E. Water St., Pontiac, Ill.

$300 Per Month.

Do you want it? If so, buy me out NOW, at your own price. Good reasons. 15,000 feet. It costs you a postal card to have particulars.

C. S. FITZSIMMONS, Lansing, Mich.

HIGH GRADE BUSINESS OPENING

If you are a thoroughly competent and practical nurseryman or florist, or are capable of handling the commercial part of the business, and are able to take corporate interest in established company three to five thousand dollars, with proportionate voice in management, you can secure such an interest in as good a proposition as is on the Pacific coast. Give definite information, experience, etc., or no attention. Address, "BUSINESS," care American Florist.

If you want to get the want you want to get, you want to get your want ad into the

AMERICAN FLORIST

Try it now.

Every advertisement represents a genuine want. It pays to answer them.

Minneapolis.

BAD WEATHER AND A SURPLUS OF STOCK. —BUYERS MAKE THE PRICES.—VARIOUS NOTES.

The week's business taken as a whole was not very good, but pursued an even tenor right through. The weather was the most disagreeable in a long while, beginning with a cold rain, changing to snow the latter part. There was a surplus stock of all kinds, especially Bridesmaids and Brides, causing a decided drop in prices. Daffodils and tulips are increasing on the market.

Friday night a bowling contest was to have come off at St. Paul between the Twin City bowlers, but the stormy weather kept too many inside. However, those attending had a jolly good time in general.

Miss Julia Ellis, in the flower department of Donaldson & Company, has not been in her usual place for a few days on account of illness

R. Wessling, on Nicollet avenue, has one of the latest improved ice boxes for cut flowers, and it is certainly an attractive feature.

A severe storm Saturday caused a delay in shipments arriving from the east.

C. F. R.

EDWARDSVILLE, ILL.—J. F. Ammann is preparing to put up a range of new short-roofed greenhouses.

THE SEED TRADE.

AMERICAN SEED TRADE ASSOCIATION.

J. E. NORTHRUP, Pres.; S. F. LEONARD, Vice-Pres.; S. F. WILLARD, Wethersfield, Conn., Sec'y and Treas.

Twentieth annual convention, Twin Cities, Minn., June, 1902.

THE business of the Brose-Fleur Seed and Plant Company, at Los Angeles, Cal., will be continued as before the death of Gustave Brose.

D. M. FERRY & COMPANY, Detroit, are reported to have sold their seed farm at Pontiac, Mich., to the Pontiac Investment and Promotive Company.

Seed and Plant Advertising.

From the time I began business, more than thirty years ago, until the present, I have not failed to be represented in the advertising columns of many of the leading mediums each season. I prefer the monthly periodicals as a class, but a well printed weekly I find valuable, if it has a general circulation among people who appreciate it. I believe it is an axiom that a paper is valuable as an advertising medium in proportion as it is esteemed by its subscribers, and my experience confirms this. A good, prominent position I regard as of much more value than a common or secondary one. I believe in a change of copy—either a new advertisement or the old one in a new form. Illustrations of an apt character help to draw and fix attention. For many years I have keyed my advertisements, and a daily record is carefully kept throughout the season and the value of the mediums according to cost determined at its close. Mediums that fall below a certain standard are discarded for several years, or until some evidence of improved circulation prompts another trial. For my purpose I have found the highest religious weeklies and monthlies of general circulation, the widely circulated monthlies and semi-monthlies of the agricultural class, and the popular ladies' monthly journals the most profitable. The value of a medium, however, depends largely upon the amount of circulation and its quality. I have never used reading notices. I prefer my announcements in straightforward, readable, attractive display advertisements.—*Geo W. Park, in Printer's Ink.*

COLORADO SPRINGS, COL.—Wm. Clark is vice-president of the El Paso County Horticultural Society, one of the most successful organizations of its kind in the county.

NEW ORLEANS, LA.—The Horticultural Society has embellished Elk Place with flower beds as a return for the courtesy of the B. P. O. E. in permitting the society to hold its last flower show there.

OSKALOOSA, IA.—W. E. Kemble is preparing to make a very considerable improvement in his place. He has placed an order for a carload of large sized glass and in addition to rebuilding the greater portion of the range in modern style will increase its extent considerably.

Wanted 5000 Rhubarb

1 year, straight roots for transplanting. Give lowest price to

Furrow Bros., Guthrie, Oklahoma.

LILIUM HARRISII.

As reliable stock as is produced on the Island, raised, crop-rogued, inspected, and packed by a grower always on the ground.

We offer this (V) brand of Harrisii as averaging the most reliable stock exported. Orders placed now can be supplied, late ones could not be filled last year and may not be this. Write for prices on 5 to 7, 7 to 9, and 9 to 11.

White Roman Hyacinths.

12 ctms. and upward, being the whole crop above the 12 ctm. size, no 13 to 15 ctms. being taken out.

150,000 of this grade imported by us the past season proved very satisfactory and we offer 19.2 crop of same, confident that this grade contains the best value possible for the price, which is made for early orders. Remember the size contains all the bulbs in the crop above 12 ctms. and up to 16 ctms. Write for prices.

N. B.—Our usual percentage of extra early deliveries will be made.

From All Parts.

AM. FLORIST CO.—It is remarkable the amount of orders my two-inch ad. brought me from the Special Number of your paper. Orders came pouring in from all parts of the United States. The American Florist is O. K. W. W. COLES.

It Is the Best.

EDITOR AM. FLORIST—Enclosed find $1 for which please renew my subscription to the American Florist. It is the best paper going. The last Special Spring Number alone was worth the year's subscription.
JOHN RODGERS.

IT PAYS BEST.

ED. AM. FLORIST:—My advertisement in your paper is paying better than in any other paper and better than it ever did before. J. N. PRITCHARD, Elk Park, N. C.

MR. ADVERTISER:

You know the excellence of the special issues which are a feature of this journal. You know that it covers the trade, that its readers await these special numbers with keen anticipation, that they are highly prized, kept for months, read and re-read. That's what makes their particular advertising value.

The Spring Number for 1902, containing a full report of the American Rose Society's meeting and exhibition at New York, and many special features, will be issued next week, March 15. It will be in every way equal to the best of our splendid special issues. That's enough said. Advertising copy to be in time must reach us by noon on Thursday, March 13. It's to everyone's advantage if you are early. Very truly yours,

AMERICAN FLORIST CO.

THE NURSERY TRADE.

AM. ASSOCIATION OF NURSERYMEN.

R. C. BERCKMANS, Pres.; R. J. COE, Vice-Pres. GEORGE C. SEAGER, Rochester, N. Y., Sec'y.
Twenty-seventh annual convention, Milwaukee, Wis., June, 1902.

THE Phœnix Nursery Company, of Delavan, Wis., has acquired from F. K. Phœnix the land which has previously been leased for the business of the corporation.

G. B. BRACKETT, pomologist of the U. S Department of Agriculture, says that the Yellow Newton apple is one of the best for export but that it is adapted to only a limited area of our country.

KNODLE BROTHERS., Irving, Ill, say that spring prospects are only fair, the last dry season preventing many from planting the coming spring. They believe the tendency to be toward overproduction and low prices, a great drawback to the nursery business.

Parks of the United States.

In the report on park census for 1901, just issued by the American Park and Outdoor Art Association, we find the following particulars with reference to the parks of the United States:

"Fifty years ago no municipality in the United States had purchased an acre of land for park purposes. But by last year's reports from all but eleven of the cities of over 50,000 population, there are 2,360 parks and squares enumerated, and while the areas given are not as complete as the names, the total areas as given amount to 59,717 acres at a valuation of $531,571,947.00. The yearly expenses for construction purposes were $4,555,213 00 and for maintenance, $4,849,150.00.

"We have not completed the reports for cities under 50,000 population, but it is probably within the facts when it is stated that the cities of the United States have 75,000 acres of land in parks and expend $11,000,000 annually in their improvement and maintenance. Taken alone these figures are large, yet it is only a small proportion of the cities' expenses. We are living in an age where 'million' is a common word, and are just learning to get used to 'billion.' When we consider that it takes $500,000,000 to run our cities, the $11,000,000 for parks is a small per cent, only about two per cent."

New York Horticulturists Meet.

The thirteenth annual meeting of the Central New York Horticultural Society was held at Syracuse, February 28 The following officers were re-elected: President, Samuel T. Betts; vice-presidents, Rev. William Beauchamp, Col. A. C. Chase, J. William Smith, L. E Marquisee, E. A. Powell and A. D. Perry; secretary, N. H. Chapman; treasurer, David Campbell; members of the executive committee, F. H. Ebeling and John T. Roberts; delegates to the rose show to be held in New York on March 11, Samuel T. Betts and David Campbell; alternates, Col. A. C. Chase and J. William Smith. All the elections were unanimous.

President S. T. Betts in opening the meeting stated that the society was planning for a chrysanthemum show in 1902 and it looks now as if the project would be a success. The programme for the evening consisted of readings and recitations by Mrs. Evelyn Benedict Ayres, professor in Syracuse University, and addresses upon subjects of interest to growers of flowers. The rooms were tastily decorated with flowers and fruits. Among the decorations were many of a humorous nature, including heribboned beets, carrots, bunches of onions and other vegetables. The president announced that during the next two months the society would hold fortnightly meetings. He also spoke of the usual custom of the society sending a gift of flowers to Mrs. Olive Cleveland, of Lafayette, who was 101 years old last Friday.

John T. Roberts, who represented the society at the recent convention of the New York State Fruit Growers' Association, gave a report, stating that New York state was coming to be the greatest apple growing state in the Union.

A. J. B.

LAFAYETTE, N. J.—J. Franklin Buckster, nurseryman, has sold out to George Moorehouse.

WEBSTER, MASS.—F. E Reide will have charge of the laying out and planting of the grounds and gardens at Beacon Park during the coming summer.

A. S.

At Omaha.

The Omaha florists had their annual bowling contest February 27, chosing sides by lot. The prize was a fine mirror donated by a local glass company and raffled off afterwards. Mr. Donaghue threw the lucky number. Individual prizes were won by Mr. Swoboda for making the most strikes and the highest average. The trophies included cash, cigars and two tons of coal. Mr. Hess won a box of cigars and a knife by making the most spares. Mr. Raber won a knife by making the lowest score. One team was made up by Messrs. Swoboda, Ringier, Zimmer, Henderson, Ellsworth, Faulkner, Jr., Goedicke, Bath, Raber and Peterson, and its score was 1,146 and 1,246, a total of 2,392. The other team included Hadkinson, Sandford, Faulkner, Sr., Adams, Wilcox, Hess, Tauchnitz, Floth, Donaghue and Sorensen. They made 1,208 and 1,247, a total of 2,455.

GRIPPE.

At New York.

The following is the record of the bowling on New York alleys on Monday afternoon, March 3:

Elliott	166	91	106	140	100	

Tarrytown Horticultural Society.

The regular monthly meeting of the Tarrytown Horticultural Society was held on February 27, President Wm. Scott in the chair. M. C. Beardsley, of White Plains, was elected to membership. Dr. Horace Enos and C. J. Quimby, of White Plains, and Peter McDonald, of Irvington, were proposed. Francis Gibson exhibited a vase of Bride and Bridesmaid roses, fifty Lady Hume Campbell violets and plants in bloom of Lady Campbell violets, all of which received honorable mention.

F. R. Pierson & Company offered a silver cup 'value $25' to be competed for at the November show for the best twenty-four blooms of eight varieties of chrysanthemums, three of each, chosen from the following varieties: Merza, H. J. Jones, Lady Roberts, Mme. Deis, Kate Broomhead, Miss Alice Byron, Mrs. Barkley, Nellie Pockett, Mrs. Elmer D. Smith, Col. D. Appleton, A. J. Balfour, Mrs. Coombes, Florence Molyneux and Mrs. Tranter.

An amendment to the by-laws was proposed and adopted providing for honorary membership and life membership. F. R. Pierson was unanimously elected the first life member of the society and A. L. Don, of New York, was elected the first honorary member. The executive committee was empowered to incorporate the society.

The essay written by James Donald, entitled "The Friends and Enemies of Our Gardens, Farms and Forests," was read by Vice-President David McFarland, it being impossible for Mr. Donald to be present.

McKellar & Winterson Co.

45-47-49 Wabash Ave., CHICAGO.

Cincinnati.

GROWERS HAVE HUNDREDS OF THOUSANDS OF BULBS TO FORCE —BUSINESS RATHER SLACK.—MACK HAS GOOD STOCK.

George & Allan's Walnut Hills place contains about 12,000 feet of glass and is devoted to pot and bedding plants. The immense amount of stock on hand shows the effects of good treatment. At Hyde Park this firm has about 45,000 feet of glass which is devoted to roses, Beauties, Meteors, Brides, Bridesmaids and Perles, all in good shape. They also have five houses of Harrisii lilies, about 10,000 plants, in 5 inch pots, which will be nicely in bloom for Easter. They have just put in 17,500 lily of the valley for the Easter trade and the visitor can see bulbs in every direction. This firm all told forces annually 500,000 bulbs, but this year they purchased about 600,000, the majority of which stock is handled by the Cincinnati Cut Flower Company.

Business has fallen off somewhat in the last week and stock has been accumulating accordingly. The flowers received, however, are very good, with entirely too much bulbous stock, which it is impossible to dispose of, especially tulips and daffodils. Good roses, carnations and lilies, both Harrisii and callas, move better than anything else. Violets seem to be a glut and the writer last week saw 1000 violets sold for $1.50. But this week we are to have the celebration of the one hundredth anniversary of the incorporation of Cincinnati as a city and we can look forward to a large quantity of flowers being used for this occasion.

Ernst Mack, on Enright avenue, believes in neatness, for a customer who sees a neat and tidy place puts more confidence in the owner. Being opposite a cemetery, naturally Mr. Mack grows blooming and bedding plants, his stock of which is in the best possible condition, especially a house of American Beauty and Hermosa roses in pots, which will be fine for Easter.

Charles Jones has had his Fourth street store remodeled, taking out the entire front and putting in a plate of glass 7x9 feet. I understand Mr. Jones will now manage his Fourth street store and his sister-in-law will look after the Walnut Hills Floral Bazaar.

Julius Baer had a swell window the past week, arranged in yellow and purple. The flowers used were double Von Sions and violets, with purple ribbons and baskets.

SYLVIA

A NEW WHITE CARNATION.

As a free and continuous bloomer it beats anything we have ever grown; flowers average 2½ to 3 inches in diameter. Rooted cuttings now ready, $8 per 100; $75 per 1000.

WOODFALL BROS., Glen Burnie, Md.

St. Louis.

TRADE QUIET AND RECEIPTS MOVING SLOWLY.—BEAUTIES THE ONLY SARCITY. —PRICES LOW. — BREAKFAST TABLE DECORATION.—NOTES.

The market is very quiet this week and stock has been coming in too fast, but nothing has been received that could be called very fancy. Roses are coming in quite plentifully but the best are few in number and $6 is about the highest that is received for them, while the poorer ones bring as low as $3. American Beauties continue to be scarce. Carnations are not bringing as much as they did a week ago, from $1 to $1 50. Violets are to be had at almost give-away prices although there does not seem to be such a great oversupply. Lily of the valley is very fine but prices are low. Bulbous stock in general brings about $2 to $3. Calla lilies are very fine, and on account of a number of funerals have had quite a run at from $6 to $10.

The largest and most important decoration of the week was the one at the breakfast table of Prince Henry at the St. Louis Club. The tables were arranged in the shape of an elongated horse-shoe. Prince Henry sat at the head and immediately in front of him was a splendid wreath four feet in diameter. Immediately back of this were two 6 foot links, connected, while along the tables at intervals were large vases and around the base of each was a design. Connecting the vases was a string of Aspargus Sprengeri interlaced with American Beauties. No other flower was used but the American Beauty and over 1,000 blooms were required. The halls and stairways were decorated with palms and American Beauties. The decoration was in charge of Ellison & Tesson.

Superintendent Ridgley, of the city parks, is trying to have some of the large trees that are to be cut down on the fair site taken up and transplanted to the different city parks. He thinks these trees can still be moved with safety and advises that it be done as soon as possible. R. J. M.

THE
MRS. E. A. NELSON
bids fair to become the Commercial standard pink carnation. It is an early, free and continuous bloomer and it is sure to do well wherever grown. Orders booked now for delivery latter part of March. For prices, see AM. FLORIST, Feb. 15.

The Sensational New Rose for 1902.
MRS. OLIVER AMES.
For description, prices, etc, see my wholesale trade list now ready.
What the leading Retail Florists of the different cities say of this Rose:
Mr. Alexander McConnell, New York, under date of Dec. 16th, writes:
DEAR SIR:—I consider your New Rose Mrs. Oliver Ames a very valuable acquisition to our collection of roses; the delicate pink tint of the bloom and fine foliage, gives the new introduction a decided distinctive character. A strong grower with excellent keeping qualities so desirable to the retail florist.
Yours very truly, ALEXANDER McCONNELL.

PLANT GROWERS ALARMED AT LOOSELY DRAWN LEGISLATIVE ACT.—REQUIRES FUMIGATION OF ALL PLANTS.

The florists and nurserymen in this vicinity are considerably stirred up about a bill which has been brought before the state legislature and which reads as follows:

AN ACT TO PROVIDE FOR THE PROTECTION OF TREES, PLANTS AND SHRUBS FROM INJURIOUS INSECTS. BE IT ENACTED BY THE SENATE AND HOUSE OF REPRESENTATIVES IN GENERAL COURT ASSEMBLED, AND BY THE AUTHORITY OF THE SAME, AS FOLLOWS:

Section 1. It shall be the duty of all nurserymen and other persons who raise or sell trees, plants or shrubs to fumigate, by the use of hydrocyanic acid or other known and approved insecticide, any trees, plants or shrubs raised or imported, or sold or otherwise disposed of by them, before the same are removed from the premises upon which they were raised, or from the premises upon which they were kept at the time when they were sold or otherwise disposed of, or from the place in which they were kept after being imported.

Section 2. In the case of trees, plants or shrubs imported from foreign states or countries, the said fumigation need not be performed, provided that the said trees, plants or shrubs so imported were accompanied by a certificate signed by a duly authorized person to the effect that such plants, trees, or shrubs had been fumigated properly and sufficiently before they were exported.

Section 3. Whoever, being a nurseryman or dealer in trees, plants or shrubs, permits any tree, plant or shrub sold or otherwise disposed of by him to be removed from the premises aforesaid without having been fumigated as aforesaid, either by him or before importation as aforesaid, shall be subject to a penalty of not less than twenty-five nor more than two hundred dollars for each offence.

Section 4. This act shall take effect upon its passage.

This measure was brought up by various committees in different parts of the state to assist is fighting the San Jose scale. It seems to have been drawn up in a way that, at the least, is very impracticable. The way the bill reads, according to my interpretation, any dealer who sells a plant from greenhouse or field, whether an apple tree or an aster seedling, must have it fumigated by hydrocyanic gas or "some other known and approved insecticide," whatever that means, before he can deliver it to his customer, or be subject to a heavy fine. I would advise all florists to bring the matter before their representatives at the general court, as it would be a serious matter if it should become a law.

A. H. L.

HOLYOKE, MASS.—O. D. Allyn has been appointed city forester to succeed D. H. Newton, who has resigned on account of ill health.

If You Have Stock To Sell...

the best way to make that fact known to the trade is by regular advertising in

Give it a trial. **...The American Florist.**

Lowell, Mass.

WEATHER NOW FAVORABLE TO EASTER PLANTS.—LILIES LIKELY TO BE THE ONLY SHORTAGE.—TRADE NOW GOOD.—STOCK MOVING WELL.—VARIOUS LOCAL NOTES OF INTEREST.

The severe snow storm that struck this place two weeks ago has all vanished; in fact, it left us as fast as it came. At the present time we are having plenty of sunshine and if the weather continues to hold on the way it has started in this month it would seem as if there would be no shortage of anything at Easter except lilies. Business for the past week has been fairly good. There has been much call for funeral flowers, keeping everybody very busy. Patten furnished an elegant casket cover of violets for the obsequies of the late Mary Coburn, using about 10,000 blooms in making it. The complexion of the rose question is somewhat changed. Brides and Bridesmaids are now more plentiful but there is a good demand for stock of good quality. The supply of red roses at present is not enough to meet the demand. Carnations seem to keep on their high perch. Lawsons and the other "top notchers" bring from $4 to $6 per hundred, while the common varieties fetch from $2 to $3. Single stocks and sweet alyssum are now coming in. There seems to be no end to the bulbous stock. Mignonette is both good in supply and quality.

Otto Bourdy, whose greenhouses are located upon the boulevard, close to the bank of the Merimack river, is wearing a worried look these days, owing to the sudden rise of the river caused by the heavy rains up in New Hampshire. The river has already risen several feet above high water mark and should it rise a few feet more Mr. Bourdy's place would be under water.

M. A. Patten is at home from the convention via Chicago, and reports a very enjoyable time.

Allan Pierce, of Waverley, was in town last week, renewing his contracts for lilies. A. M.

POMEROY, PA.—The real estate of the late W. H. Harvey has been sold to Charles Harvey, a brother, also a florist at Kennett Square.

LAKE FOREST, ILL.—Calvert & Son are preparing to rebuild a 200 foot house and if everything goes well will add to their range next year.

FOR SALE Four large specimen plants, **LATANIA BORBONICA**, height and spread twelve feet, in 30x30x30-in. cedar boxes in good condition.

10 large green and variegated **ALOES.**
10 large variegated **YUCCAS,**
Can be sent by freight about May 1st.

JOHN RALPH, Saratoga Springs, N. Y.

HEADQUARTERS for EASTER PLANTS

BLOOMING EASTER WEEK

I have the largest stock in Philadelphia; 7 large houses and some hot beds, are crowded with them. Secure your supply by ordering now.

AZALEA INDICA

As I am agent for a large concern in Belgium and being a large importer of these choice Easter plants, I can sell you these direct st first hand and not through a middleman. Mme. Van der Cruyssen is a rare article this Easter. I was fortunate enough to get all this variety in Belgium I wanted and can offer you plants at the following prices: 5-in. pots, 40c to 50c; 6-in. pots, very bushy and large, fine shape, 75c to $1.00; specimens 7 and 8-in. pots, $1.25 and $1.50 each; extra choice specimens, very large, can't be beat, 9 and 10 in. pots, $3 50, $4.00, $5.00 each. Other varieties of Azaleas, such as Bernard Andre Alba, (white), also other white, Princess of India, Prof. Wolters, and other varieties of my own selection, 6-in. pots, 50c, 60c, 75c, $1.00 each; larger plants from $1.25 to $1.50 each. Also 5-in. pots, 40c each.

Cineraria—I have an immense quantity, best colors, 5½ and 6-in. pots, $3.00 to $4.00 per doz.

Spiræa Compacta and Floribunda, perfect jewels, 5½ and 6-in. pots, $3.00 to $4.00 per doz

Hydrangea Otaksa, 6-in. pots, $3.00 to $4 00 per doz.; 7-in. pots, 60c, 75c and $1.00 each.

Begonia, Pres. Carnot, Metallica and other good varieties, 5½ and 6-in. pots, $3.00 to $4.00 per doz.

Begonia Vernon, very fine, red, large, 4-in. pots, $1.50 per doz. Other good mixed varieties, 4-in pots, $1.20 per doz.

Daisies, (white), Marguerite, 5½ and 6-in. pots, very bushy, $3.00 to $4.00 per doz.

Yellow Daisies, 5½ and 6-in. pots, $3 to $4 per doz.

Lilium Harrisii, raised from Henry F. Michell's selected 7-9 bulbs, ($100 per 1000) fine plants, 6-in. pots, from 5 to 10 buds to a plant at the rate of 10c per bud. No Lilies sold by themselves—other plants must accompany the order.

Dracæna Bruanti, 6-in. pots, 25 inches high, very fine, 60c.

Dracæna Indivisa, (imported), very large for decoration, 7-in. pots, 75c to $1.00 each.

Hyacinths, my own importation, raised from the finest named bulbs all colors, 4-in. pots, $10 a 100.

Tournesol Tulips, (double red and yellow striped), 3 in a pot, $1.50 per doz. pots. Belle Alliance, (single), scarlet striped, 3 in a pot, $1.75 a doz pots

Daffodils, (Von Sion), 3 in a 5-in. pot, $1.50 to $1.75 per doz. pots.

Azalea Mollis, 6-in. pots, 50c each.

Cash with order please. Money can be sent safely by postoffice or express money order or bank draft. All goods shipped at purchaser's risk.

GOOD RAIN PUTS BRIGHT ASPECT ON BUSINESS PROSPECTS IN SOUTHERN CALIFORNIA.

Southern California has had a glorious rain and the soil is completely soaked. This condition has been anxiously awaited for several months and now that early spring is here it is too late for a severe frost to follow, though there is an abundance of snow on the higher mountains. The weather is still unsettled although we have had nearly five inches of rain within ten days. A few days of sunshine will produce an enormous quantity of flowers and start all vegetation into rapid growth.

Since the rain came business in the line of ornamental shrubbery and nursery stock has taken a boom and it is doubtful if the supply will equal the demand for many varieties. As an instance, since the rebuilding of the Raymond Hotel in South Pasadena, 25,000 trees, shrubs and plants have been used to ornament the grounds.

The Lenten season, which is carefully observed by many of our society people, has caused a notable falling off in trade, giving the store people a breathing spell which is very acceptable to them, but business is reported unusually good for this season.

The Redondo Floral Company, which in common with others suffered severely by the frost in December, is planning to erect several new greenhouses, consuming about 15,000 feet of glass. These will be used principally for carnations.

D. R. W.

MADISON, N. J.—L. M. Noe and Mrs. Noe are in Florida for a month's stay.

CORTLAND, N. Y.—L. D. C. Hopkins, L. N. Hopkins and H. S. Hopkins are the proprietors of the Hopkins Greenhouses. They are figuring on materially enlarging their plant and have placed an order for 6,650 boxes of 16x24 glass for the purpose.

TRADE EXCELLENT.—STOCK PLENTIFUL BUT PRICES HOLD WELL.—OFFICIAL PARTY VISITS DUNLOP.—PLACE IN FINE ARRAY.—SOCIETY MEETS.

Trade has braced up a little the past week, but is still erratic. Roses continue good and plentiful, and although the demand has fallen off somewhat, the prices are still well maintained. Bulbous stock keeps moving nicely. Violets are very plentiful and large quantities can be had at bargain prices. The bright days which we have experienced lately have given us a splendid outlook for Easter and though there is still the cry that lilies will be scarce, from the quantities I have seen around the different houses there will be plenty for all. Genistas, rhododendrons, lilacs, Crimson Ramblers, hybrid and moss roses are well advanced and if the weather is at all favorable all will be ready in good time.

While en route to Niagara Falls to welcome Prince Henry, the Countess of Minto and party honored J. H. Dunlop with a visit, intelligence of which had been telegraphed by Comptroller Guise. Her Excellency is well versed in horticulture and was much interested. The visit could not have been more opportune, as everything was in prime condition. The Countess of Grey, who was with the party, left an order for Prosperity, Mrs. Lawson, Governor Roosevelt, Olympia and some of the other newer carnations, which she will introduce into England in April.

The Toronto Horticultural Society held the first of its monthly meetings in St. George's Hall on March 4. The meeting was well attended and a very creditable exhibition of plants was made. Some nice orchids were shown by Geo. Mills. There was also on view a silver challenge cup which will be given at the carnation meeting for best vase of carnations.

St. Patrick's Day has created an extra demand for oxalis the last few years.

TRADE UNCERTAIN AND MOST STOCK IN OVERSUPPLY.—NOTES OF LOCAL INTEREST.

Trade is quiet, excepting for bargains offered by different stores to coax buyers. Funeral work has been fair but that, of course, is not steady business. Supply in all flowers is more than equal to the demand. Lilies and all bulbous stock, are plentiful, the only scarce flowers seeming to be Bride roses. Bridesmaids and others are in profusion. Fine carnations are coming in. The few fine days last week brought out flowers in abundance. On some roads the delays have been great, owing to the washouts, which interfered with both shipping and receiving stock.

We are grieved to announce the death of Mrs. Fred. Wise, wife of one of the firm of Wise Bros., East Aurora, which occurred last week. Among her friends in East Aurora she was very warmly esteemed.

S. B. Smiley has about arranged his loses and will start rebuilding at once.

Mr. and Mrs. W. F. Kasting have returned from Indianapolis and Chicago.

Visitor: J. A. Valentine, of the Park Floral Company, Denver, Col., for whom Phil. Scott works. W. A.

Washington.

BUSINESS CONTINUES FAIR DESPITE THE UNPLEASANT WEATHER.—NOTES OF INTEREST.

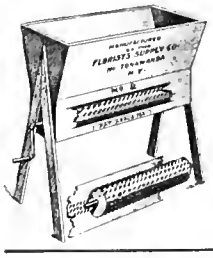
Trade is fairly good considering the unpleasant weather we have had. Roses, carnations, violets and sweet peas are coming in plentifully. J. R. Freeman made a fine crescent wreath on an easel, of cattleyas, dendrobiums, lily of the valley and Bridesmaid roses, for Prince Henry to place on the tomb of George Washington on his visit to Mount Vernon, February 28.

Senator Perkins, of California, gave a dinner at the Metropolitan Club March 1. The decorations were done by the American Rose Company, using exclusively Miss Alice Roosevelt rose.

John H. Ley has a fine lot of genistas in bloom and they seem to be in demand. P. G.

Used all over the United States.

SOD CRUSHER and Pulverizer



They will save you the amount they cost you in one week.

Economy in Heating.

ED. AM. FLORIST:—Our place of 35,000 feet of glass is heated by steel tubular boilers, of which we have four, in all about 120 horse-power. Most of the time two will do the heating, but in zero weather we use three. We carry a boiler insurance and our boilers are inspected about three times a year. The inspector informs us that one larger boiler would be much more economical in the use of fuel, claiming that we would save at least one-half. We use Illinois soft coal, the size known as buckwheat. Would it be profitable for us to discard the four boilers and secure one large enough to heat our place with steam? If so, what would be the better style of boiler and what should be its capacity?

ECONOMY.

The use of a single boiler would undoubtedly be more economical in fuel, but if those now in use are in good condition it might depend upon circumstances whether it would be good economy to throw them out and buy a new boiler. For use in case of an accident, or of repairs being needed in the large boiler, it would be best to retain at least two of the present boilers. A horizontal tubular boiler would under most conditions give the best results. Its size would vary with the temperature required in the houses, as well as with the exposure and the minimum outside temperature, ranging from seventy to eighty horse-power for average conditions. With a large grate area and a good-sized stack some of the finer grades of coal will give good results and, if the cost is reasonable, will be found quite economical. L. R. TAFT.

THE AMERICAN CARNATION SOCIETY.

Annual convention at Brooklyn, N. Y., February, 1903. ALBERT M. HERR, Lancaster, Pa., secretary.

Wearing Off the Green.

We find the following seasonable lines in a contemporary:

Oh, reader dear, of course you hear
The news that's going round,
About the legend that's renewed
In every public ground:
Where'er you go in public parks
"Keep Off the Grass" is seen;
They are fining men and women
Just for wearing off the green.

That we are true to Ireland
This tribute doth appear:
We try to keep inviolate
Our Emerald veneer.
And some municipalities
So true to this have been:
They've sent men up for thirty days
For wearing off the green.

Easter Prospects.

Every indication points to a big Easter business, a volume of trade which, with favorable weather, promises to exceed previous records. As a matter of fact, the weather is from now on the most important factor in the matter of Easter business. With prosperity in the land and bright spring days the purchasers will throng the flower stores, and bright, warm days, too, will make a nice supply of stock, probably enough in most lines for all requirements, but it seems that there is very general complaint as to the lily crop and a prospect for a shortage. At the same time, however, it will be a mistake to put prices too high; it will be likely to deter buyers from ordering this item and Easter morning may find a surplus unsold after all.

THE AMERICAN ROSE SOCIETY.

THIRD ANNUAL MEETING, NEW YORK, MARCH 11-13, 1902.

As announced, the annual meeting of the American Rose Society was held at the Berkeley Lyceum Building on Wednesday afternoon, March 12, and the joint exhibition of this society and the Horticultural Section of the American Institute was held in the same building on Tuesday, Wednesday and Thursday. The hall was rather small for such a collection of flowers, there being about 5,000 cut roses, besides the other flowers and plants on exhibition, and as they were all of the extra and special grades, they required lots of room. Other than this the exhibition, the arrangements and the attendance were all that could be desired under the circumstances.

AMERICAN ROSE SOCIETY'S MEDAL.

The bulk of the flowers on display naturally were American Beauty, Bride and Bridesmaid roses. There was, however, a gratifying representation of such varieties as Papa Gontier, Bon Silene, Mme. Hoste, Perle des Jardins, Sunset, Sunrise and Mermet, besides vases of some new claimants for popular favor, and an impressive display of Ivory and Miss Alice Roosevelt, these last named varieties being shown by the introducers, the American Rose Company. In the regular open classes for twenty-five blooms each of specified varieties, the Dale Estate was first on Bride and Perle, second on Cusin, Bridesmaid and Morgan; H. Hentz, Jr., first on Beauty: J. R. Mitchell first on Bridesmaid, second on Bride; Benj. Dorrance first on Sunrise, second on Liberty, Hoste and Meteor; J. N. May first on Morgan, Hoste, Gontier and Bon Silene, second on Golden Gate; Robt. Simpson first on Golden Gate and Mermet, the latter being in the "any other variety" class; Stephen Mortenson first on Liberty; Peter Duff second on Gontier. The blooms of Liberty shown by Mortenson and Dorrance were especially fine.

In the class for growers having not more than 20,000 feet of glass devoted to rose growing, E. Waller was first on Beauty, H. T. Rohner on Bride and J. R. Mitchell on Bridesmaid. In the division limited to private gardeners and amateurs C. F. Bertanzel won out on Beauty and Perle, Geo. H. Hale on Bride, Bridesmaid and Mrs. Morgan, and Peter Duff on Gontier, and the premiums for specimen blooms were evenly divided as to number between Messrs. Bertanzel and Hale. There were no entries in the H. P. classes. In the plant group competition there were but two competitors, H. C. Steinhoff taking first for group of roses arranged for effect, for six roses in 8-inch pots and for specimen in tub, while for six Crimson Ramblers, Robert Scott & Son were first, with Steinhoff second.

In the special American Beauty competition, fifty blooms in a vase, A. Fahrenwold won the first prize, $50, the second going to H. Hentz, Jr., and a special to L. A. Noe. All of these were very fine. The Lord & Burnham challenge cup went with the first prize in this class. The special class for fifty blooms, any variety except Beauty, called out two magnificent entries of Liberty from A. Fahrenwold and B. Dorrance, who won out in the order named. The American Institute silver medal for the largest display of cut blooms, went to B. Dorrance, and a similar award for largest display of plants was awarded to H. C. Steinhoff. A special Institute prize was given the Dale Estate for Brides.

The special premiums of the American Rose Society were awarded as follows: The President's prize for three varieties of cut blooms, twenty-five each, to Peter Crowe. The Stoeckel prize for six varieties, twenty-five of each, to Benj. Dorrance. The Executive Committee prize

for roses in pots to H. C. Steinhoff. American Rose Company's prize for twenty-five Golden Gate to Robt. Simpson. Mrs. T. Newbold's prize for fifty Liberty to B. Dorrance. Clarence H. Mackay cup for twenty-five Beauty to C. F. Bertanzel. B. Dorrance prize for best collection of roses from distant exhibitor to the Dale Estate. A final certificate of merit was given to B. Dorrance for Rose Sara Nesbit, and H. C. Geiger for Queen of Edgely, and the American Rose Society silver medal to Benj. Durfee for Ivory.

Rose Gold of Ophir shown by F. Lundberg made a good impression, as did also Peter Henderson & Company's new rose, Mrs. Theo. Roosevelt. Bessie Brown was not much admired, the color being too undecided. Helen Gould (Balduin) came in on the second day from Waban Conservatories and attracted much attention. In carnations, Adonis from Robt. Craig & Son, Mrs. Potter Palmer from Chicago Carnation Co., Enchantress from Peter Fisher and a white sport from Lawson shown by C. H. Allen were noted, also a collection of seedlings from A. J. Wengerter. Lager & Hurrell had a group of fine orchids, G. T. Schuneman a nice display of violets, W. A. Manda a dish of Cherokee roses and J. N. May a vase of mammoth mignonette.

The joint session of the American Rose Society, American Institute and Horticultural Society of New York convened in the theatre of the Berkeley Lyceum at three o'clock on Wednesday afternoon. Dr. F. M. Hexamer called for order and introduced Dr. Murphy, president of the American Institute, who, on behalf of his association, pressed a sincere welcome upon the visitors and accorded to the rose society high praise for its aims and what it has already accomplished. Robert Craig was scheduled to reply, but in his absence Benjamin Dorrance responded on behalf of the rose society, in words of appreciation, and made a most eloquent little speech. Geo. T. Powell spoke for the Horticultural Society of New York, outlining its purposes, which are to collect and diffuse information and promote a taste for trees, plants and flowers. He said his society is in full sympathy with the rose society and predicted that the time is coming when New York will be one of the most beautiful cities in the world. Miss Harppam recited "The Rose" and Dr. Britton spoke briefly regarding the wild roses of America, S. B. Parsons, who was scheduled to speak on old time roses, being detained by illness. Dr. Britton said that there are twenty kinds indigenous and four others naturalized. He described their habit and praised their attractions of color simplicity and wealth of flower. He referred to the movement to discourage indiscriminate picking of wild flowers in woodlands adjacent to cities and hopes to see people learn moderation and not exterminate flowers. Miss Busing sang and then Dr. R. Huey read his essay on the "Best Garden Roses," following which John N. May read the paper prepared by E. G. Hill.

The Misses Mabelle and Palmiter sang and the joint session concluded with Cornelius Van Brunt's beautiful color slides, adjournment being taken for the annual meeting of the rose society.

President F. R. Newbold being ill, ex-President Benjamin Dorrance presided at the annual business session of the American Rose Society. President Newbold's address was distributed and the secretary's minutes and treasurer's reports were read. Secretary Barron distributed the bulletin on diseases of the rose. The secretary's report referred to the unsatisfactory financial outcome of the Waldorf-Astoria show last year. The active membership list was stated to be 155, including thirty-six life members. Two deaths were reported as having occurred during the year, those of Edmund M. Wood and J. M. Goode. It was found impracticable to carry out the plans regarding last summer's exhibition at Newport, and the secretary recommended that the summer meeting would better take the form of visiting some established show, with credentials from the rose society to confer certificates and award medals under specified rules. Secretary Barron then read Dr. Van Fleet's paper on hybrid rose stocks.

In the discussion which followed, Robert Simpson told of experiments with various stocks and said that he had found none to compare with Manetti

EMIL BUETTNER.
Vice-President-elect American Rose Society.

and that Rosa setigera was the worst of all. He found it inclined to sucker and said that while it might be alright for outdoor planting, it is useless under glass. A complimentary letter was read from Spencer Trask regarding the circular on plant diseases and expressing a willingness to contribute medals or otherwise assist the society. The offer was referred to the executive committee.

A committee was appointed to prepare suitable resolutions to be spread on the minutes as testimony of the esteem in which the deceased members were held. Then followed a brief discussion of the president's address and the matter of the selection of the next place of meeting was referred to the executive committee with power to act.

It was the sense of the meeting that the society should go elsewhere next year, preferably to Chicago. The election of officers followed, President F. R. Newbold being re-elected. Emil Buettner, of Park Ridge, Ill., was chosen vice-president and Secretary Barron and Treasurer May were re-elected. E. G. Hill was elected a member of the executive committee to serve one year and F. R. Mathison, of Waltham, Mass., and John Good, of Springfield, Ohio, were elected to the three year term. All the elections were unanimous. The proposed changes in the by-laws were adopted and the tenure of office begins with August instead of January hereafter.

Robert Simpson offered a resolution placing the society's seal of disapprobation upon the commercial theft of new varieties of plants and urging that the national government enact amendments to present patent laws to cover plants as well as other articles. The resolution was adopted and Benj. Durfee, Patrick O'Mara, Alex. Wallace, John N. May and S. T. Betts were appointed as a committee to further the matter.

A vote of thanks was given to the American Institute and its officers for their courtesy and adjournment was taken at 7:30 p. m.

Among the visitors were A. B. Scott, John Burton, H. C. Geiger, Robt. Kilt, J. L. Dillon and W. Craig, from Philadelphia and vicinity; M. H. Norton, P. Welch, F. R. Mathison and W. W. Edgar, from Boston; W. F. Gude, Washington; Ed. Dale and Chas. Tidy, Toronto; J. B. Keller, Rochester; E. Lundberg, Lenox, Mass.; Benj. Durfee, Washington; Peter Crowe, Utica, and A. Dimmock, London.

President F. R. Newbold's Address.

For the third year in succession the American Rose Society gathers for its annual convention in the city of New York. In the three years that have passed since our organization was completed a large amount of missionary work has been done, and it may be stated as an accepted fact that the American Rose Society is well established. Already it has had an influence on the rose industry of the country, and has been instrumental in drawing public attention to some very valuable new varieties in a way that could not have been done by the individual without incurring great expense in comparison.

But what the society has accomplished so far is little in comparison with what it should do and could do. In the last three years the chief energy of the society has been devoted toward the successful exploitation of the rose at the annual exhibition. Has not the time now arrived when the society should resolve to undertake an active campaign for the betterment of the rose as a flower, and, exercising a watchful eye over all that pertains to the production, introduction, and distribution of the rose, so extend its sphere of work as to embrace all matters of interest to rose growers whether commercial or amateur?

The American Rose Society must be more than an agency for fostering competitive exhibitions, it must be the central authority on all that concerns the rose, and to that end steps should be taken that the work runs on at all times. Perhaps this can be best accomplished by means of standing committees.

There has been an almost unprecedented increase in the introduction of new varieties, but at present the rose society does not receive any official record of such. Not only in this country but also in Europe this activity has been noted. The year's results should be brought to the notice of this meeting in the form of a report from a standing committee on new roses, such a report to embrace the names of all varieties recorded in the year and should also include notes on synonymy and nomenclature, and so far as possible comments

upon the possibilities of the variety whether for commercial or hardy garden use. This work conscientiously done would add materially to the general utility of the American Rose Society, increasing as the years rolled by.

After the lapse of a year the issue of the "bulletin" of the society has been resumed, and a very exhaustive treatise on the diseases of the rose is in the hands of the members. Our official bulletin should become a thorough record of rose activity in America, and in it could be recorded the annual reports of the standing committees so far as they were of public interest. The question of publication is another matter for a committee.

Other standing committees on exhibition and one for the preparation and arrangement of the plans for the annual meeting would assist the executive committee, and enable them to better direct the policy of the society as a national body.

The executive committee might assume the functions of an expert committee to sit in judgment on novelties that may be brought before it, on dates other than the annual meeting of the society. In this way hardy roses could be examined and judged. Under Article 2 of the constitution, this meeting could authorize some such course. Some arrangement for interim examination of new roses is very necessary.

The operations of the society might be made more national, perhaps, through the medium of the honorary vice-presidents. These gentlemen should be selected each year as representatives in the larger centers of the country, and they could carry on the work of the society in their respective territories. The appointments are in the hands of your executive committee, and the body elected to-day should take action.

The American Rose Society gratefully acknowledges the services rendered to the rose by the present co-operation of the American Institute of the city of New York, through whose courtesy we are now gathered in this fine theatre. The present association inaugurates a policy that the society may well consider seriously, namely, the joining of forces with a local horticultural society. The propriety of a national organization undertaking the functions of an exhibition association, which it has done before (and at considerable financial loss to those members of your executive committee who were responsible) has been questioned.

To the Society of American Florists, also, our thanks are due for placing at our disposal two medals, which are to be awarded to novelties of American origin only. The advisability of accrediting a special delegate to the S. A. F. meeting might be considered.

During the past year, too, your committee has adopted a new course in offering a silver medal of the society for award by a local society where roses are a feature of the show. If this practice were extended the influence of this society would be felt in many places, and the interest of the rose, especially as a garden plant, would be increased over a larger area than could otherwise be done. In this connection a scheme for affiliation of local organizations giving attention to the rose could be elaborated and provision made for the award of the society medals under society rules and society judges. This in time might be further developed into a system of local committees, acting for and with the authority of the national society.

WREATH PLACED ON THE TOMB OF WASHINGTON BY PRINCE HENRY OF PRUSSIA
(Artist, J. R. Freeman, Washington, D. C.)

The authority of the society should be strengthened by the appointment of a board of experts, to whom questions may be referred; on this board should be a pathologist, an entomologist and a botanist, and the last named could give attention to the native roses which may yet yield results to the hybridist. One of the objects for which we are established is stated by our constitution to be: "To foster, stimulate and increase the production of improved varieties." Let us see to it that we do that which we have set about.

These suggestions are offered to the members for such action as they may see fit to take. Your executive committee is the willing force to carry out your desires, but the membership here assembled should set the course.

You are asked to vote on two amendments to our by-laws, due notice of which has been given in accordance with our rules; and it might be well, too, for this meeting to formally accept the present scale of points or such amended scales as it may decide upon. The constitution requires that the society should formally adopt a scale.

Whatever may be the course in future, we can rest satisfied that New York has fairly launched a society which, in the hands of energetic and capable officers, will be of untold influence in the horticulture of the future. May other cities do as well for the American Rose Society as has the Empire City.

Hybrid Stocks for Rose Propagation.

BY DR. W. VAN FLEET, LITTLE SILVER, N. J.

But little effort has been made to ascertain the rose stocks best suited for American use. Rose growers here mainly propagate cuttings, and "own root" roses of all varieties that may be increased in that manner have, until very lately, been much preferred for culture both under glass and in the open. Recent successful commercial trials, however, have shown the advantage of grafting certain forcing roses on stocks resistent to the eel worm, as well as to supply a root system of greater vigor than is inherent in the variety wanted. Then, too, a considerable number of the most desirable hardy roses propagate very sparingly, if at all, by cuttings. The increase by root cuttings and clump division is slow and precarious, so that budding and grafting on congenial stocks remain the only practicable methods.

We have hitherto accepted the stocks most approved by European growers as

without question the most available, and for greenhouse commercial work the Manetti rose, of hybrid China parentage, may always be most useful; but for outside planting both Manetti and dog brier have proven dismal failures under our climatic conditions.

The latter does not thrive at all, and the former, while vigorous enough, suckers badly and ceases growing too early after dry summers to encourage late blooms in those varieties disposed to autumnal flowering.

Manetti roots are very fibrous, forming a perfect mat in rich, moist soil; but they run shallow and are quickly affected by drought. They drink greedily soluble nourishment, but seem unable to extract much plant food from dry soil. The common experience with roses worked on Manetti is that they are troublesome and short-lived, unless so planted as eventually to throw out an adequate root system of their own. The great majority of the imported budded roses are discarded after blooming a season or two, and the remaining plants seldom develop into the strong, vigorous specimens we have a right to expect.

These defects in European stocks have been long known, though but little effort has been made to find more useful substitutes. One nursery in the west claimed some years ago to use Mme. Plantier, a vigorous and very hardy rose of much-mixed parentage, but of the hybrid China type, with great success; but we have not heard much about it since. Our native prairie rose, Rosa setigera, has been used in an experimental way by the writer and others with much success, both as a stock for budding and for root grafting. It is exceedingly hardy, the foliage is resistent to most diseases, and the root system is strong and penetrates the soil deeply. Buds or grafts unite readily, and the union seems very permanent, but time has not tested the latter claim. All varieties tried grow well on this stock, which may be easily increased by seeds or cuttings. It is of a climbing habit, and the canes are not suitable for high budding for tree or standard effects. The roots seldom sucker, all the new growth starting from the crown.

For high budding we have found nothing better than the Penzance hybrid sweet briers, Rose Bradwardine, Amy Robsart and Anne of Gierstein. They grow here more upright and vigorous than the type species, and are not subject to sun-scald like standard Manetti Other hybrids of the sweet brier, with General Jacqueminot, and with various hybrid perpetuals, of our own raising, have the same characteristics. There is no suckering, and they are easily increased by cuttings.

Lord Penzance and other sweet brier hybrids containing blood of the Persian Yellow class should be avoided for this purpose. The canes are more slender, and propagation is less certain.

The most suitable stocks for low or dwarf budding and root grafting appear to be hybrids of Rosa multiflora and R. Luciæ, more widely known as R. Wichuraiana. Seedlings of Clothilde Soupert crossed with Crimson Rambler furnish the best example of the former class.

Some are thornless, or nearly so, strong, rapid growers and deep rooters. They work very easily, and the buds or grafts soon make a firm union. They can be increased by cuttings of green and hard wood with the greatest facility.

Crosses between Crimson Rambler and R. Wichuraiana, to use the name best known, are still more vigorous but less upright in habit and quite thorny. They strike readily from cuttings, and also root as freely from the tips as a dewberry, when allowed to trail. The roots penetrate the soil deeply, and the bark works with the greatest ease when ready for budding.

Crosses between R. Wichuraiana and China roses sometimes possess great vigor. One plant two years from the seed, planted in poor, gravelly upland threw a trailing cane twenty-six feet long last summer. They all seem very easy of propagation and are more upright and less thorny than R. Wichuraiana itself, which trails as flat as a melon vine.

The roots of R. Wichuraiana and its hybrids go deep down in the soil, and if there is any moisture or fertility they will find it. They will thrive on the most barren slope when established and the plants look as if they would endure for all time. The long, smooth roots are admirable for grafting, and they can be worked as easily and certainly as apple roots if good wood is fitted to them. The grafts may be tied with twine or lightly waxed and packed in damp moss, and kept rather warm until union is effected.

WILLIAM CRAWFORD BARRY.
(See page 238.)

Neither Rosa multiflora nor R. Wichuraiana hybrids sucker, but buds start freely from the crown, which should be set rather deeply in budded plants. There is no trouble with suckering from the root grafts. Plants of the above hybrids grown from cuttings of good sized wood are very manageable and would seem to preferable to Manetti for most purposes.

R. multiflora seedlings are being used to some extent by commercial rose growers, and they seem to be growing in favor; but we think hybrids of the Rambler series would be more satisfactory. Helene, a very vigorous and almost thornless seedling of Crimson Rambler, is now in commerce, and looks as if it would answer the purpose admirably, though we have not tried it.

While rather off the subject the writer would mention that Perle des Jardins, budded on an established plant of the Cherokee rose, Rosa lævigata, is giving splendid blooms of almost exhibition quality, in a cold, damp house where five years' effort with potted Perles on own roots and Manetti only resulted in a chance "bullhead" once or twice a year. Further trials will be made with teas and hybrid teas on this stock.

There is a growing conviction among propagators that the stock is as important as the scion, and grand commercial results have come from the proper selection of resistent and congenial stocks in the culture of grapes, plums and other fruits. The breeding of stocks by hybridization and selection may become as essential as the production of new varieties, if American rose culture is ever to reach its proper development in the horticultural world. The conclusions above detailed are based on very limited experimentation, and are offered only to stimulate further research in that direction.

New Roses.

BY E. G. HILL, RICHMOND, IND.

The subject assigned to me is an interesting as well as a problematic one with which to deal from the standpoint of the American rose grower.

Unconsciously, perhaps, every new candidate is measured and gauged by one of three sorts, American Beauty, Bride or Bridesmaid. Of each new comer it is asked, "Is it as good as Bride or Bridesmaid or Beauty?"

While we shall, in the future, undoubtedly have as fine sorts in varying colors, it is not my good fortune to chronicle the advent of any such in this paper, though attempts at producing them are proceeding in many places and we hope that the coveted yellow or red Bridesmaid may soon make its appearance.

It is announced that there are to be added to our list this coming year a yellow and a pink Kaiserin; we shall be glad to welcome them and hope that they may be distinct enough to hold their places. One or two recent sorts, similarly described, have lacked the necessary qualities to give them permanence.

Bessie Brown has many points that go to make up a valuable rose. While it is probably the grandest variety of Carnot color, it sometimes comes with crimped petals, which somewhat detracts from its beauty.

Mrs. Mawley is certainly a fine tea rose of enormous size and produces a very large quantity of buds, but with us it often comes soft in texture and brings too many short stems.

The English gold medal rose, Mildred Grant, is most beautiful and, whilst perhaps it has too great an infusion of the H. P. blood in its veins to force in winter, it should prove a fine rose for pot and garden culture.

Lady Battersea is a lovely cherry crimson colored tea from Mr. George Paul. This we hoped would prove a valuable forcing variety, but regret to say that it refuses to move into growth during three of the principal winter months. We had hoped for better things from it.

Mrs. Oliver Ames should prove of value wherever Mme. Cusin prospers. It is a very fine shipping variety and wonderfully productive as seen growing at Mr. May's place. It is a charming color and its delicate shadings lend beauty to a cluster of the variety.

All those who succeed with Golden Gate will want Ivory. It is an ideal forcing rose and will doubtless secure a place for itself alongside of the Bride, which is saying a great deal. It is very prolific and of good constitution, and the quantity of flowers produced will commend it. Its sparsity of foliage is held against it by some, but the same objection holds against Golden Gate.

AMERICAN BEAUTY ROSE HOUSE OF T. W. LYDECKER, ENGLEWOOD, N. J.

Duchess of Portland, Lady Beauclerc, Mamie Boadicea, Mrs. R B. Cant. These charming British roses we have seen bearing their beautiful flowers, but whether they will force in winter is questionable. However, they are each and everyone charmingly beautiful and will doubtless supplant many of the hybrid perpetuals which are now grown in our gardens.

No more finely shaped flowers than the above varieties produce can be found in any class of rose, and among their chief merits are large size and continuity of bloom.

Out of over eighty varieties imported during the last eighteen months the following commend themselves as being worthy of growing: Prince de Bulgaria, a fine salmon-tinted hybrid; Andre Rafly, in the way of Prince Camille de Rohan, but freer in bloom; Mme. J. Favre (H. T.); Duc de Mortemart (H. T.); Miss Agnes C. Sherman (tea); Pharisaer (H. T.); Mina Barbanson; La Tosca (H. T.); Mlle. Viger (H. T.): Marquis de Querhoent (tea), a promising sort; Mme. E. Perrin (H. T.); Franco-Russe, a fine apricot yellow tea.

I think the above named will surely prove interesting and worthy additions to the garden, or for growing in pots.

We hope another year to chronicle the advent of some new American seedling roses, but they had best be exhibited ere much is said concerning them.

The Best Garden Roses.

BY DR. R. HUEY.

Climatic conditions must necessarily modify the selection of a list of the best garden roses. The personal experience of the writer is confined to the vicinity of Philadelphia, and what is here noted will apply especially to that locality, where the temperature rarely falls below 10° Fah. A variation of a few degrees is of no consequence in the cultivation of the hybrid perpetual class. But with teas, hybrid teas, noisettes and Bourbons, this variation frequently means success or failure, as few of these varieties will endure long-continued exposure to low temperatures.

In the portions of the United States where the winters are severe, the most popular class is the hybrid perpetual, as this is the only one able to resist extremely low temperatures without protection; but wherever the winters are moderately mild, as in eastern New York, New Jersey and Pennsylvania, the hybrid teas are becoming deservedly popular, as they live out of doors all winter and bloom all summer.

I believe that the rose of the near future is the hybrid tea class, for the roses of this cross in cultivation have given and are giving great satisfaction to the cultivators, especially to amateurs who are growing th m as garden roses and who can certainly cut from a moderate collection a vase of these roses every day from May until November.

It is to be noted, however, that all hybrid teas are not continuous bloomers; for instance, the beautiful Gloire Lyonnaise and glorious Her Majesty, which should be listed in this class, as it has tea blood, its parentage being Mabel Morrison, crossed with Canary tea; this rose is successfully grown as far south as Florida.

HYBRID PERPETUAL ROSES.

Alfred Colomb,	James D. Paul.
Alfred K. Williams,	Jeanne Dickson,
Annie Wood,	John Hopper,
Baroness Rothschild,	Lady Helen Stewart,
Captain Hayward,	Mabel Morrison,
Caronne d'Arden,	Mme. Gabriel Luizet
Charles Lefebvre,	Magna Charta,
Clio,	Margaret Dickson,
Countess of Oxford,	Marie Baumann,
Dinsmore,	Marie Verdier,
Dr. Andry,	Merveille de Lyon,
Duke of Edinburgh,	Mrs. John Laing,
Duke of Teck,	Mrs. Sharman Crawford,
Dupuy Jamain,	Paul Neyron
Etienne Levet,	Pride of Waltham,
Eugenie Verdier,	Prince Arthur,
Fisher Holmes,	Prince Camille de Rohan,
Francois Michelon,	Rosslyn,
Gen. Jacqueminot,	Rev. J. B. M. Camm,
Giant of Battles,	S. M. Rodocanachi
Heinrich Schultheis,	Ulrich Brunner,
James Brownlow,	White Baroness,
Xavier Olibo.	

HYBRID TEAS: CONTINUOUS ROSES.

Antoine Rivoire,	Kaiserin A. Victoria,
Augustine Guinoisseau,	Killarney,
Balduin,	Lady Clanmorris,
Bessie Brown,	La France,
Captain Christy,	Miss E. Richardson,
Caroline Testout,	Mrs. Grant (B. Siebrecht),
Duchess of Albany,	Reine M. Henriette,
Gladys Harkness,	Souv. President Carnot,
Gruss an Teplitz,	Souv. Mme E. Verdier,
Viscountess Folkestone.	

MOSS ROSES.

Comtesse de Murinais.	Crimson Globe,
Laneii,	Blanche Moreau,
Princess Adelaide (the old pink).	

CLIMBING ROSES.

Crimson Rambler,	Celine Forestier.
Cheshunt Hybrid,	Reine M. Henriette,
Gloire de Dijon,	Microphyllæ, pink and white.

The finest climbing rose in cultivation for this climate is undoubtedly Reine Marie Henriette. Budded it makes a luxuriant growth of several canes ten or twelve feet long, and blooms continuously from May until hard freezing weather sets in. The color is a very good

BRIDE ROSE HOUSE OF T. W. LYDECKER, ENGLEWOOD, N. J.

cherry red, buds long and pointed, opening up rather loose, with delightful tea fragrance. This is altogether a charming and satisfactory rose.

HYBRID SWEET BRIERS.

There are sixteen of the Lord Penzance hybrid sweet briers, all worthy of a place in a large collection. Green Mantle is especially attractive.

HYBRID WICHURAIANA.

Only two are known to the writer, but they are a very promising class. Jersey Queen and Gardenia are good, the latter especially.

All the roses named will live out in this climate without much protection. A top dressing of three inches of well decomposed manure and in extreme cases an additional covering of leaves held in place by evergreen boughs or corn stalks, will winter nearly all safely. But in order to increase the collection by adding the tea class, provision must be made for giving these additional protection.

A charming effect may be obtained by planting in a bed six feet in width, the rows one foot from the edge and two feet apart, and the bed of any desired length, or any multiple of three feet. A sectional frame made from tongued and grooved white pine fencing, two and a half feet in height at the back and, two feet in front facing east or southeast, and fastened together with hooks and eyes or screws, the whole covered with ordinary cold frame sash (3x6 feet), will preserve the tender varieties through a severe winter. The sash should be freely opened when the temperature is above 30°, and air admitted during the day when it is 10° or 15° lower. Always close before sunset and open as soon as the sun shines each morning. Opening the sash to keep the plants cool and prevent growth is just as essential as covering to protect from cold, if abundance of flowers is desired. A few days' neglect in opening the sash when the temperature is above 30° will destroy most of the buds for the coming June, as they will be forced out, and one cold night will kill them. Protect from rains or snows and do not water. Sufficient moisture reaches the roots from the outside to keep the plants in a healthy condition.

The writer has a number of teas that have been grown successfully in such a bed for many years. They give hundreds of fine blooms from May until November, and remain so vigorous that many of the new shoots are half an inch in diameter.

TEA SCENTED ROSES.

Alphonse Karr,	Madame Lambard.
Comtesse Riza du Parc,	Maman Cochet,
Duchesse de Brabant.	Marie Van Houtte,
Etoile de Lyon,	Papa Gontier,
Francesca Kruger	Safrano,
Hon. Edith Gifford,	Souvenir d'un Ami.
Isabella Sprunt,	The Queen,
White Maman Cochet.	

The foregoing lists are the result of some twenty-five years of careful observation and are the selection from several hundred different kinds, many of which have been discarded as worthless. It is not to be supposed that these lists include all the desirable roses for this climate. There must be many good roses that will do well under favorable conditions, of which the writer has no personal knowledge, but each one named above has been thoroughly tested and found worthy of cultivation.

Much of the charm of growing roses is derived from the accurate knowledge of each variety by name; yet few amateurs ever accomplish this, chiefly because the labels have been lost or misplaced and not infrequently a plant becomes known to the cultivator by a name belonging to a neighboring specimen, whose label has been misplaced and replaced on the wrong plant.

To obviate this a record should be made in a book kept for the purpose, with a chart for each bed. This should be done as soon as the plants have been set out, before the labels become detached.

HOUSE OF LIBERTY ROSE GROWN BY ERNST ASMUS, WEST HOBOKEN, N. J.

I would urge upon each member of this society a more thorough familiarity with the name, habits and appearance of every rose he cultivates, that he may be able to assist beginners, who find it very difficult to obtain accurate information of this sort. How many gardeners can tell us correctly the name of a rose with which we are unfamiliar and which we would like to procure? If we are going to encourage the cultivation of the rose (and that is the purpose of this society) we must be able to give each other much more accurate and truthful information than can be obtained from the dealers' catalogues.

I would also suggest that each member of the society report to the secretary yearly, the name, habit of growth, peculiarities and hardiness of each new variety tested during the year, and that these be published in the bulletin.

William C. Barry.

Eminent among the American horticulturists of to-day stands William Crawford Barry, of Rochester, N. Y.; his life has been devoted to the work and few men have succeeded in mastering so thoroughly all the many branches of the profession. In young manhood he was sent to Europe to finish his education. Among other things he acquired the fluent use of both French and German. Returning home, Mr. Barry took up the details of the work in the great nursery with which he has been since identified and mastered the minutæ of each department, one by one. He knows his business from the bottom up. He was admitted to partnership in the firm of Ellwanger & Barry in 1870. While there is no plant, tree or shrub in the wonderful collection on the grounds with which he is not thoroughly familiar, roses have received his particular attention for many years. Mr. Barry is in the prime of life and his energies have found play in many enterprises outside of the nursery business. A splendid presiding officer, it was but natural that he should become president of the Western New York Horticultural Society, a post he has held for a dozen years. He is also president of the Eastern Nurserymen's Association and was a prime mover in the reorganization of the American Rose Society, becoming its first president. Mr. Barry was a member of the board of control of the New York State Experiment Station, and for three years its president. He has been for eight years a member of the Rochester Park Commission and has found the time for important business connections in his city, being a member of the Board of Trustees of the Rochester Chamber of Commerce, vice-president of the Flour City National Bank and of the Rochester Trust and Safe Deposit Company, also a director of the Rochester Electric Railroad Company, and the Rochester and Suburban Railroad Company. He is now treasurer of the Ellwanger & Barry Company, and of the Ellwanger & Barry Realty Co. While he has but once held public office, having been elected supervisor in 1873, his name has frequently been mentioned for the position of Mayor of Rochester.

Society of American Florists.

DEPARTMENT OF PLANT REGISTRATION.

The E. G. Hill Company, Richmond, Ind., registers Carnation Seth Low; color bright scarlet, growth robust, free bloomer, stems stiff and strong, calyx good. WM. J. STEWART, Sec'y.

A Lifelong Friend.

ED. AM. FLORIST:—Enclosed is another dollar. Certainly your paper cannot be spared on this place. It has been a regular visitor at my establishment ever since the paper was started and it will stay with me until I am able to retire, and then I will have still more time to read it.

Newark, N. J. JOHN G. MULLER.

NEW ROSE MISS ALICE ROOSEVELT.

LORRAINE BEGONIA TURNFORD HALL.

THE LIBERTY ROSE.

JNO. N. MAY, SUMMIT, N. J.

The Liberty rose with us is a first-class fizzle.

GEORGE & ALLAN, CINCINNATI, O.

We have only one plant of Liberty and that is one too many, according to our idea of it. Our neighbors grow them and they feel awfully sore about it. Probably our soil does not suit them, or we may not know the way to grow them in this district. For an experiment we planted one Liberty, one Beauty, one Meteor, one Bride, one Bridesmaid and one Perle at the end of our Bride and Bridesmaid house. All did well with the exception of the Liberty, and that's about the size of a good 3-inch pot plant at present.

BASSETT & WASHBURN, CHICAGO.

We find Liberty to be in great demand and in order to carry a complete stock of flowers a grower must plant it. Our experience with it this season is that we can produce more and better blooms than a year ago and we think as the needs of the plant become better known that Liberty will gradually take the place of Meteor. It will also push the American Beauty at certain times of the year. We cut Liberty with stems four feet long and blooms fully as large as any Beauty last May and June. They sold at better prices than the extra long-stemmed Beauties.

JAS. SOUDEN, MINNEAPOLIS, MINN.

I have had many inquiries regarding the way we grow Liberty roses and must say that we have been very successful. Our mode of treatment may be different from others, and here it is:

We have just finished grafting our Liberties for next season. The Manetti being very slow to start, caused us to be a little late. However, they are taking nicely. After we take them out of the grafting case we keep them in a temperature of 60° to 65° at night. Through the day, if the sun shines, we shade rather heavily and do not ventilate for a few days, until they get used to their new quarters. In about nine or twelve days, according to the progress they make, we repot into 3-inch, and in about five or six weeks into 4 inch.

Then, about the middle of May, if they have made a nice growth, I give them what I call a partial rest, by standing them outdoors, or better still, keep them in a nice, light, airy house, where we can watch them closely, but water and syringe them enough to keep the wood solid and leaves from falling off I keep them in that dormant condition until about the first of July, when we clean out and replant. But, before we start to plant I shade the house a little and keep them shaded until the eyes have swelled considerably. I think, by giving them the partial rest, that they are not so inclined to become dormant in the middle of winter when flowers are very scarce.

Our soil is a rather light, sandy loam; water passes through it very freely. At time of planting I use one-fourth cow manure; then, after the first crop of weeds has come and gone, I give them a small top dressing of well rooted cow manure to keep the hot, burning sun away from the roots. It also holds the moisture and does away with the necessity of watering so heavily.

Now a little about grafted stock and own root stock handled in that way:

THE WIDELY DISCUSSED LIBERTY ROSE.

This season we have had one-third grafted stock and two-thirds on its own roots. The grafted stock has produced the most flowers to the plant, on stems running all the way from nine to eighteen inches. Own root stock has produced more long stems but not half the flowers. They have also been inclined to go to rest during the latter part of January and February, so the coming season I am going to use mostly grafted stock.

CHAS H. RONEY, JAMESTOWN, N. Y.

Recent results with the Liberty rose have been very gratifying. Last year we grew Liberty in a temperature of 58°, as advised by the introducer, but toward midwinter it came to a standstill with us. I then raised the temperature to 60°, the results being very much more desirable. We then came to the conclusion that they would be better with a still higher temperature, and this season I have carried from 62° to 65° with gratifying results. Next season I intend to plant my stock of Liberty and carry it at a Meteor temperature and shall be much mistaken if the results are not better than this season.

We carried over our last year's plants of Liberty, lifting them and transplanting them to another house. They have done much better than the young plants and I am inclined to think, from our experience, that the two-year-old plants are the best. From them we have cut all of our select and fancy flowers, splendid buds on four-foot stems. It is our intentention to carry these plants another season, making three years for them. We are far from being discouraged with Liberty and expect to plant it quite largely another season.

The beds in which we have grown them this year could hardly be called solid, in the sense of the word that some growers use the term. Our beds are built on the ground, and made with a 10-inch plank for sides, in which we place three inches of stone for the bottom and drainage. On top of this we put a good, tough sod, grass side down, leaving about five inches for prepared soil. We claim that this mode of planting gives a better finish to the flower, and they are not so inclined to be soft.

HARRY SIMPSON, EDGELY, PA.

I give my opinion about Liberty rose with the understanding that I do not place myself as an authority on the subject, as there are others whom I consider better at growing the Liberty than myself. Furthermore I do not wish to give this rose a black eye, as the introducers are personal friends, but I may without doing the rose or its sponsors any harm, give my experience with it. We are

growing this season about 7,000 Liberty, part of which I have grown in Meteor temperature, which is with me 66° to 70° at night, and part of them have been run 56° to 60°. Both lots have done fairly well, are at present writing in good condition and apparently full of buds, with length of stems up to three feet. It is a rose that seems to require a high temperature and plenty of nutrition to keep it growing, otherwise it will attain a stunted look and put out but few buds, and these few have very short stems.

A peculiarity I find about Liberty is this, that when you look over a house of same, you imagine that the cut of the house must be enormous when in reality the cut is just about one-half the amount of our general teas and less than half of Meteor, so that from a money making standpoint we must get double the price for Liberty to let us out. Can we do it? Then, taking into consideration that in the three or four hot months, when Meteor is in its glory, the Liberty is off color and cannot be used, making it more disappointing. I must add that I am very sorry, as I like the rose, but we poor growers cannot afford to grow a rose just because we like it. Every variety must pay its way, otherwise we are obliged to drop it.

What we want to-day is an all year red rose that will produce as well as Meteor and flourish in a temperature of 60°. However, we will try the Liberty another season, on benches, as up to date we have grown them in beds. Possibly we will get more bloom that way.

ERNST G. ASMUS, WEST HOBOKEN, N. J.

We could not get along very well without Liberty, and I am growing as many as ever, about eight or nine houses of it, and expect to increase on that next season. Liberty is the only rose in the New York market that approaches the Beauty in price, being only a trifle below them. At Christmas time the best Liberty commanded as high a price as the best Beauties.

I am succeeding with it now, the same as when I first put it on the market. Liberty is not an easy rose to grow by any means. The least oversight in its treatment, given below, will cause it to be checked, and then good-bye to your Liberty crop for the season. I give herewith the methods I use and under which Liberty has so far given me the most excellent results.

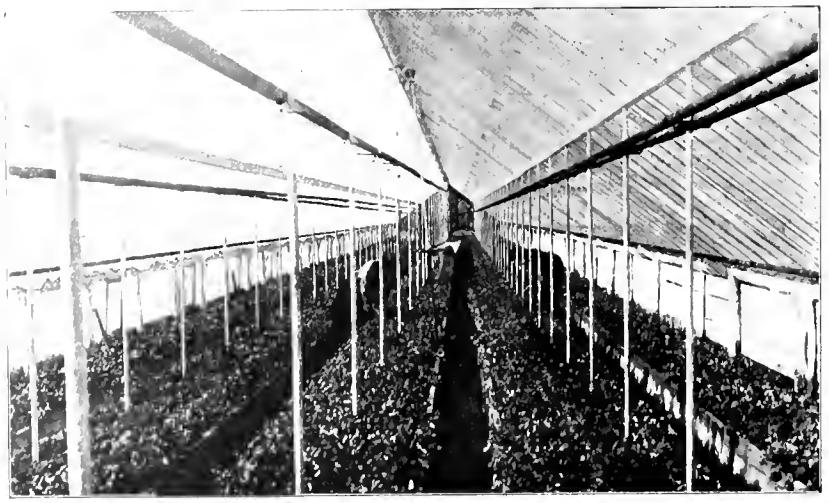
I plant them in good, rich loam, or rather sod, mixed with about one-third of old cow manure, giving them at all times a liberal amount of water. Keep all young buds, as soon as they are about the size of small peas, well nipped out, but be sure when nipping out the buds to nip them with about two or three leaves, according to the thickness of shoots. Liberty is a persistent bloomer and if you only nip the bud alone it will throw other small buds, instead of good flowering wood.

By no means allow the plants to get checked or hard. Do not allow them to flower before they have attained a good height, say three or four feet or more, which one can get only by keeping the buds off before the wood gets hard. This, I find, is the only secret to growing Liberty. If my advice on this point is strictly followed I do not think anybody need have any fear of Liberty not growing.

Be careful about the details, such as watering and ventilation. They require about the same temperature as Brides and Bridesmaids, but can stand a little more water. I give mine a night temperature of 58° to 60° with a 10° increase on bright, sunny days.

Up to last year they have been almost black spot proof with me, but the one house I had last year showed me that they are like most all hybrid teas, subject to that dread disease. If attacked, be careful that every spotted leaf is removed, and do it at once. As soon as you see a few spots, do not wait until the whole plant is infected; then it will be too late to check it. I find carbonate of copper, dissolved in ammonia and about one gill to a watering can of water, a preventive, but not a cure. It is used by syringing two or three times a week.

In conclusion, I would say, do not look for real good colored Liberties before the weather gets cold. I have never had good blooms before November and you will get them a good deal finer in December and January, when Liberty is at its best.



VIOLET HOUSE OF WM. SIM, CLIFTONDALE, MASS.

S. ALFRED BAUR, ERIE, PA.

"Give us Liberty or give us death" was the cry of the advertiser not long ago, when this grand new rose was placed on the market, and judging by the appearance of most of the stock seen at various florists' establishments, the latter alternative seems to have carried the day in spite of the many good intentions of rose growers of more or less prominence. What is the trouble with Liberty? Who said it would replace Meteor? Liberty has troubles of its own. Meteor can take care of itself and will probably be grown when Liberty is forgotten, even though Meteor has some faults. How do we account for the many failures in growing the Liberty rose? Perhaps the main reason is that we have been trying to grow it like a tea rose, making no allowance for the fact that it really belongs to the hybrid tea section and, as such, must have its season of rest or trouble is sure to follow.

To grow Liberty successfully we should start with grafted plants from 3-inch or 4-inch pots planted in the benches about June 15. Keep it growing without check until November 1. Keep off all buds until that time. When disbudding cut back the shoots to good solid eyes. This will induce the plant to make good growth and prepare it for its flowering period later on. Many failures in growing Liberty can be traced to improper disbudding. Some disbud by just nipping off the buds with the fingers; this only results in the plant sending out a lot of weak growth, which in a short time makes more inferior buds and takes the strength of the plant long before it is able to bear the strain.

During its growing season Liberty can stand a good lot of water. This makes it necessary that the benches should be well drained, otherwise trouble is sure to follow. Black spot should be guarded against during the fall and winter months; in other words keep the temperature even at from 60° to 62° at night with 10° higher in the day time. Otherwise treat it the same as a tea rose. Those who remember the old W. F. Bennett rose of some ten years ago and studied its peculiarities will find much the same fault in the Liberty rose, with the exception that Liberty holds its color better and is a stronger and more erect grower.

I believe much the better success can be had with the Liberty by carrying the plants over the second, third and fourth years; in fact, there is no reason why it could not be kept going year after year for ten years if treated as we treat early hybrid roses for Christmas blooming. The following treatment has been found very successful: Dry the plants off, beginning about July 15, and ripen off until September 1, allowing the plants to get dry enough to lose all leaves. In order to do this properly they should have plenty of ventilation day and night.

By September 1 they should be cut back to within ten to twelve inches from the soil and all weak shoots cut out entirely, leaving only from three to five of the strongest on the plants and these cut back well into the solid, ripened growth. Clean off the beds thoroughly. Water the beds lightly for the first week, gradually increasing until the soil is in good fertile condition. Give the beds a light top-dressing one-half inch deep spread evenly on the bed, of one-third manure, well rotted, and two-thirds soil. From this time on treat the plants just as you treat hybrid roses that you want to get into crop for the holidays. The only difference will be you will get the Liberty into bloom about December 1 and will have a succession of bloom all winter long, with very little interruption until you must dry them off for the next sea-

ESTABLISHMENT OF G. VAN BOCHOVE & BRO., KALAMAZOO, MICH.

son, when you go through the same process again.

Treated in this manner I believe we have in Liberty one of our very finest forcing roses and, above all, it brings in the best returns when roses are worth their weight in gold, as it were, during the months of December, January and February. Liberty is not a rose for the small grower. I believe it will always hold its place with the larger growers, who are willing to give it the treatment that it requires to bring it to perfection. When given its proper culture few roses will yield better financial return, but with indifferent treatment it is not worth house room.

BY OUR CORRESPONDENT "R. I."

This grand rose has given some trouble since its introduction, but this only goes to prove that it will be of much value to all who will grow it successfully. It is a too valuable addition to our list of winter roses to be discarded without giving it a fair chance.

It is not as double as the Bride or Bridesmaid and consequently makes a finer formed flower when it is open. The color is all that can be asked for, it being a very fiery red, and has a beautiful gloss which gives it the finishing touch. When grown as it should be it will send out a great amount of bottom shoots which reach up to a surprising height. When these buds are cut you will be able to get a nice, long stem and still leave enough eyes on the plant to furnish still other strong breaks, which always make good flowers on Liberty when they come from near the base of the plant.

To grow Liberty successfully we must start at the time we begin to work up our stock and treat it separately. Do not try to handle it with Bride, Bridesmaid or Golden Gate without giving to it the amount of care it deserves. The Bride may be treated as the Bridesmaid, or vice versa, but treat the Liberty as the Liberty. This is especially applicable in temperature and watering.

I should say now, before I go further, that as a rose on its own roots it does not give the satisfaction that it does when grafted. I saw Liberty growing the first winter after its introduction at three of our best rose establishments of the east, and at all three of these places it could easily be seen that it was far better grafted than on own roots.

When you are getting ready for grafting, care should be taken to select eyes which have not started at all and which are from strong wood rather than from any brush which may be on the plants. It is a good plan to leave one or two extra eyes, besides those which should be left for the next break, when you cut a flower. Then when you are ready to graft you can look over the plants and select strong, healthy eyes for your next year's stock.

After they are put in the case they will need to be taken care of the same as other roses, but they nearly always require a trifle longer time in the case. It is best to look them over when they begin to callus, and to remove those far enough advanced to a part of the case where you can give them a little air and leave the others in the heat until they do start. Look them over carefully and treat them in this way and you will get a better strike than as if you handled the whole batch as one plant.

After you have them out of the case and hardened to the full amount of sunshine and air, watch them carefully to keep down spider and black spot. Fortunately for us, this rose is not troubled with mildew, but if you become careless you will find the evil of black spot to work against.

You will soon have some disbudding to do on these young plants, and right now is the time when you will be liable to do wrong if you treat them the same as you have your Brides or Bridesmaids. When you disbud Liberty always pinch back to an eye which has a good leaf on it. You will notice many shoots with a long tip on which are only a few small tips or leaves. These eyes seldom make a good break, they will often send out a small shoot about one inch in length, with a bud on it which is of no use whatever. The best way is to pinch back quite low down and in this way avoid short stems and brush. Keep them in good condition in the pots, do not let them get pot bound, give them good drainage, and if you disbud them as they should be you will have nice, strong, stocky plants to bench.

The greatest drawback to this rose is the fact that it requires a high temperature. To grow it well it should be run at 62° to 64° at night and 68° to 70° in the day time, with air on. I have seen it grown with Brides and Bridesmaids with the temperature at 58° to 60°, but they were not as good as those grown in the higher temperature. If you try to grow them at this low temperature you will need to watch them very carefully, because if they get too dry or the tempeature should happen to drop any lower on some cold night you will be liable to send them to sleep and they will be useless for the rest of the winter, until the sun gets strong again.

Watch them carefully during the winter. Do not let them get dry, as they will receive a check very easily. Rather water them often and little, as you will encourage black spot if you let them get very wet and a dark spell of weather comes along. I think it better to plant them on raised benches when you can, as, with a pipe under the bench, you can manage them better in regard to watering.

When the sun begins to get strong in the spring a mulch of well rotted cow manure spread on the soil will help to stimulate new growth. In conclusion I should say that under the management of a careful man, one who will watch the result of each watering, this rose will not prove as difficult to handle as it seemed it would the first year. It is care and not secret processes which will grow it as it should be grown.

A House of Violets.

The illustration on page 240 is a reproduction of a photograph of a house of violets grown by Wm. Sim, at Cliftondale, Mass. The house is 20x200 and contains 2,600 plants of Princess of Wales. The plants were benched the third week in November, following a crop of chrysanthemums, each plant being given one square foot of bench room. The photograph was taken January 29. The yield from date of benching to March 1 was 213,000 first-class blooms. The house runs from north-east to south-west and the crop promises to hold out until after Easter.

A Michigan Establishment.

The illustration on the preceding page shows G. Van Bochove & Brother's greenhouse plant. Up-to-date and modern in all its appointments, the Van Bochove plant is of but comparatively recent growth and development. It is the same old story of an enterprise in embryo, gradually expanding under the persistent care of two progressive young men, until we see a range of eighteen well equipped houses, including over 65,000 feet of glass.

Roses and carnations constitute their specialties and, as may be seen from the illustration, there are no houses better adapted for that purpose. The stock produced is invariably of a high grade, commanding the best prices in the wholesale market. Two houses are devoted to American Beauties, the demand being such that a third one may be bullt for the purpose.

A fine and spacious office, equipped with all the modern conveniences, both useful and ornamental, including a type writing machine and a damsel manipulating it, lends a sort of charm to the general effect of the place. NOMIS.

Cave-Grown Mushrooms.

Many attempts have been made to grow mushrooms in worked-out mines or caves, but only with occasional success, owing to the unfavorable influence of various chemical constituents of the soil. But at Wheatland, near Mumford, Monroe county, N. Y., the exact conditions required are found in the gypsum mines of the Consolidated Wheatland Plaster Company. These mines have been worked for years, the gypsum being blasted out by dynamite, removed in mule cars and ground up in the large mills of the concern, to find its way into the various products of the company. The result is huge caverns some fifty to sixty feet below the surface of the ground, some eight acres of them, varying from six to eight feet high, totally dark, damp and about 56° temperature all the year around. It affords ideal conditions for mushroom growing.

The mushroom industry had its start here in a peculiar way. In the early days of the concern Chas. H. Root, the manager, caused to be put into the mines a quantity of horse manure which was placed in heaps where it was allowed to heat up for the purpose of putting therein sticks of frozen dynamite to be thawed out before being used for blasting the gypsum rock. Finally the heat all left the heaps and they were allowed to remain in the mines, where, due to the right temperature, moisture, and so forth, the manure turned partially into natural spawn. While walking near one of these heaps Mr. Root discovered something white thereon and, upon investigation, to his surprise, found a mushroom measuring eighteen inches in circumference and weighing fourteen ounces. Of course the mushrooms do not usually grow as large as this; however they are usually from three to five inches in diameter when picked for shipment.

This discovery led to an investigation of mushrooms and their culture, with successful results. An expert mushroom grower was employed by the concern and the business of growing mushrooms for the market established. Manure is purchased by the company in nearby towns in carload lots and after being removed from the cars is cured by turning over and over until it is of the right temperature, when it is loaded into mule cars and taken into the mine. Here the manure is promptly made up into beds sixteen feet long and four feet wide and about ten inches in depth, where it is allowed to remain until the temperature commences to fall, when the spawn is put in about two inches below the upper surface of the beds, in very small pieces, about one foot apart each way, and the whole mass is then covered with from one-half to three-fourths of an inch of loam or virgin soil taken from immediately beneath the grass on some fertile pasture.

MUSHROOM BEDS IN A NEW YORK GYPSUM MINE.

In about six to eight weeks' time after this operation splendid mushrooms will appear on the surface of the bed, as may be seen in the accompanying illustrations reproduced from flash-light photographs taken in the interior of the mine. A bed thus brought into bearing will produce mushrooms for two or three months. These beds are constantly being put in and the crop is therefore a continuous one. The mushrooms are picked in the afternoon every twenty-four hours, packed in five and ten-pound baskets, lined and covered with paraffine paper and shipped by express to the leading hotels, restaurants and markets, arriving there in the early morning of the following day.

The price realized varies according to the demand and the season, but usually ranges from not less than 50 cents a pound to $1.25 a pound. Mr. Root credits much of the remarkable success achieved to the use of the spawn natural to the place.

The Sweet Pea and Its Failings.

The plan Mr. Hutchins suggests for developing a resistent stock of sweet peas is a very good one, and we think he would be the proper person to undertake such work. Selection along these lines is a system commonly practiced by seed growers and, while it frequently takes many years to develop anything definite, it is not an expensive operation, simply requiring care and watchfulness.

Whatever the cause might be of some failures, a strong sturdy stock would be a good thing to develop. We might state that we are working along these lines here, and we trust that the sweet pea will soon be as popular as ever in the vicinity of Springfield, Mass.

LESTER L. MORSE.

Out of the Ginger Jar.

Well, children, here it is, Sunday morning and mid-March; another hard week's work just over our heads and the prospect of a few minutes gossip with you furnishing relief and refreshment. Although you might not think it, the cares of business are serious to me, as to all of you, and it is a relief and refreshment to relax once in a while and try to look on the cheerful side of things.

A merry heart goes all the way,
A sad one tires in a mile, O.

Therefore my Easter budget from the Banks of the Delaware must try to be as optimistic as if there existed no such presence as Dull Care. That, for my own sake, as well as for yours.

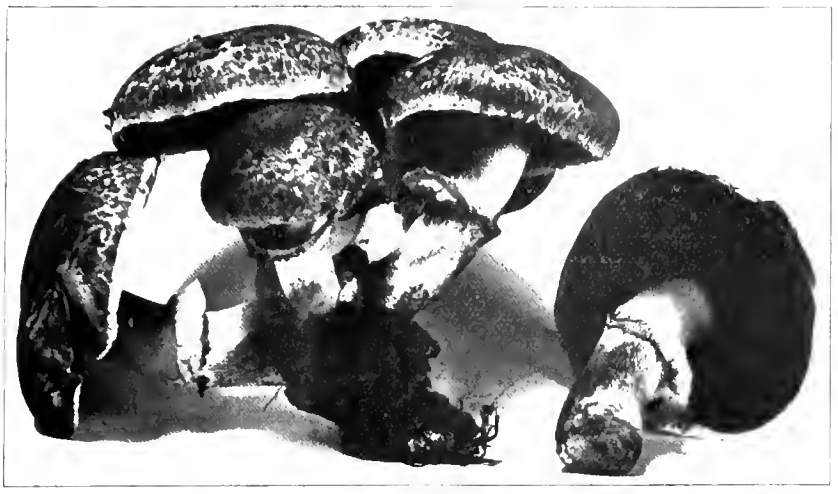
What's been going on down this way? Well, one thing that has impressed me much lately—during all the blizzards and thaws and floods we have had—is that the time of the boys is almost equally taken up damming the gullies and damning the lilies, and both seem to be equally futile. I met George Anderson on the corner the other day and asked him what this thing was—anyway—this "longiflorum disease." George is a close observer and I thought he might have a wrinkle, as he has less trouble with his lilies than most.

"Man," said he, "that's easy. Did you you ever see a pug-dog running along the street on three legs?"

"Of course."

"What makes it do it?"

"Don't know—natural I suppose."



MUSHROOMS GROWN IN A NEW YORK GYPSUM MINE.

"Yes, but its also because it's tail is curled up so tight. Yes sir, its a fact. Those pug-dogs have their skins so tight by tail curling that it actually compels them to rise up behind."

"But what's that got to do with the lily trouble?"

"Well, that's just the way the lilies kink up."

"Yes, but what causes it?"

"Oh, as to that, its just natural to all lilies—unless you know how to handle them."

And that was about all the satisfaction I got out of "Stand Siccar."

Whatever guess I may have myself about this lily trouble is as liable to be wrong as right, so I will keep it to myself until it becomes more matured. What the fellow with a twenty-five or fifty per cent loss wants is comfort—warm comfort, not cold comfort—a plausible guess does not fill his pocket.

When in that frame of mind it is well to reflect:

1. That the trouble is almost universal, and that you are no worse off than your neighbor.

2. That the proportion between supply and demand has thereby changed and prices on what you have ought to go up enough to make up for the deficiency in the crop.

3. That it is your business to pull yourself or yourselves together and see to it that they do go up. And put some dynamite, some force, some backbone into that resolve, for it wont happen unless you all agree and then stick to it.

My firm belief is that if everything were dead easy, if there were no insects, no bacteria, no microbes, no wicked bulb merchants, no north winds, no trouble at all to fight, then the greenhouse man would be out of a job. The more skill a thing takes to grow the better the reward. So thank your stars, children, that it still takes some skill to grow some things.

An old friend of mine asked me the other day, "What's the matter with you Philadelphia people? What are you making such a fuss over that Balduin rose for, anyway? I know it, and would'nt give a gowpenfu' o' glaur for it."

I told him that wasn't the point. All that was desired was to find out the correct name of the rose. The trouble with the committee was that they found out too much. They found out not only what the correct name was but also who was responsible for the wrong one. For one, I'm glad there was a fuss. The air needed clearing. There will be no more skulduggery in nomenclature for some time to come. Besides that, look what a jolly fight it was while it lasted! The principle involved was worth fighting for and to be purged of a fraud makes every honest man feel good.

We all recognize that very cold weather at Easter is a serious condition for the retailer. What is it likely to be March 30, 1902? A small "crumb of comfort" is here given in the way of a record of that day for the past twelve years. This information was hunted up by Mr. Battles and I pass it along for your benefit:

YEAR.	HIGHEST.	LOWEST.
1890	46°	34°
1891	59°	39°
1892	53°	32°
1893	54°	28°
1894	50°	31°
1895	51°	38°
1896	60°	45°
1897	65°	46°
1898	55°	41°
1899	54°	38°
1900	41°	33°
1901	51°	32

During these twelve March thirties pleasant weather prevailed except in one instance (1900). The record for that one was "cool, raw and disagreeable, with rain all day."

Among others these records will be pleasant reading to my friend Robert Kift. You know how I love to please him, and I suppose you know we had a little tilt a week or two ago. What astonished me was Robert's lack of humility when found fault with. Just swelled out his chest and went and did it again. If it was'nt that I'm a much better looking fellow than he is I'd really feel like hitting back. And then there's my record—no I don't mean my record—I have no record—but there's my brain power. I'm just simply bursting with brain-power, but I keep it so well hidden that people, girls especially, have been known to call me Big Idiot. But I just pity them, for don't I know all the time what's inside. And although I have no record, I honestly believe I have a very fine pedigree; but unfortunately my great grandfather got mislaid somehow and I cannot trace myself back to William the Conquerer, although I believe I go that far and farther.

If you were a seedsman how would you like to have this sort of thing fired at you?

The seed catalogues are piling up on our table again. Steer clear of all who do not advertise in the regular way, unless you positively know that they are all right. This country is becoming one vast weed bed and the unscrupulous seedsmen are largely to be blamed for it. Grass seed, timothy and clover are especially apt to bring us foul seeds. With every bag of the stuff there should be an iron-clad guarantee as to purity. I mean to have it, too.

What rubbish! Anyone who has stood back of the counter and shown samples of grass seeds to the farmer as I have for the past twenty-five years can tell you different. If there be anyone to blame it is the farmer himself, for a very large percentage of them deliberately select weedy samples just because of the price. And yet writers like the one I quote—and he appears in that staid and reliable monthly the *Farm Journal*, at that—will tell you it's the seedsman's fault, just as if seed could be machined and re-machined and the cost of it remain the same. There has been no time within my experience when farmers could not get their seeds absolutely clean. Red Top might be cited as an exception, as we did not have the proper machinery until about a dozen years ago. The seedsman is like any

MUSHROOM GROWING SIXTY FEET UNDER GROUND.

other merchant, he has to keep qualities to suit all his patrons. The remedy for the selling of low-priced seeds is to educate the farmer. The seedsman will respond mighty quick, and glad to do it. But there are some farmers, I am sorry to say, who would require Oliver Wendell Holmes' plan to reform them—begin with their grandfather. Or give them the choice of selecting their own parents—and then they wouldn't be farmers at all, but the sons of millionaires.

That reminds me that there's another notion going the rounds of late—nature study for children. The idea is to start the child of six studying botany and entomology and ornithology and zoology and geology and goodness—or badness—knows how many other 'ologies. As if the poor creature did not have trouble enough in its early years with the "three R's!" The fact is the common school curriculum is far too crowded now and the scholars have no time to lay thoroughly the foundation with the three R's. Have you ever taken a boy of fifteen into your office and found that he could spell half decent? I never have. Isn't the common sense plan of teaching the essentials thoroughly first, the best one? As it is now the child gets a whole lot of stuff and nothing thorough in any of it. And yet sensible people like Edwin Lonsdale and Prof. Hamilton and a whole lot more like them are loud in their advocacy of "nature study" for the common school. Am I so dumb or are they mistaken?

Another knotty point the Philadelphia boys have started in to wrestle with is the patenting of novelties. The trouble broke out here with Edwin Lonsdale and has been in full blast all along the line for some weeks. Lonsdale is getting to be a

AN EIGHT-MONTHS OLD BRANCHING RUBBER.

regular Don Quixote. First he went careering after nature study; then Frauds in Nomenclature loomed up, and with the assistance of two other gallant knights that Giant was unhorsed; now comes Protection to Papas of New Plants. This latter is a difficult damsel to deal with and if the Duke succeeds finally in leading the Dulcinea to safety there will be loud acclaim. I am not quite sure who is the Sancho Panza at present, unless it be H. H. Battles; but he won't stay long in the fight. He has too many Giants of his own to fight.

Apropos to the visit of Prince Henry—would the following chorus which I heard sung in the club room the other night be considered a case of *lese majeste:*

Hist to the roll of the big base drum,
Now is the time when the Dutch will come,
The Amsterdam Dutch,
The Rotterdam Dutch,
The Allentown Dutch,
And all shake hands with the Pennsylvania Dutch.
Then here's to the Irish. They're not very much,
But they can blank sight better than the blank, blank Dutch,
Hip, hip hooray for the Irish!

And it wasn't only the voices of "Dan" Allen and "Benny Leader" and "Jack"

SELF-BRANCHED FICUS NINE MONTHS OLD.

Dunham—irreverent and graceless Americans with Irish leanings, but I could also distinguish the lovely basso of "Doc" Kuestner and the embryo tenor of Charley Eimerman, familiarly known as the "Little Wonder" and the "Little Corporal." People of sense, like Commodore Westcott and yours truly, did not join in on this kind of thing. We consider it *infra. dig.* Besides our vocal talents have always lain dormant and we couldn't sing to save our lives. That story of Gurney Hill's about the Irish being too green to burn in the lower regions is a large draft on the imagination. What with ditties like the foregoing and "Pat" O'Mara's dig at the A. P. A.'s and the potato for a national flower, it looks to me very like as if the Irish were ripe for the burning.

Well, children, paper's done, and I must stop for the nonce. I hope none of you will take any of my poor attempts at a joke seriously, but like loyal members of the family laugh even is you don't see the point. And I trust I've put in something for Job to have a growl at. It would be too bad if not a stickful for him should appear among my chatter. Let us all try to keep our ends up!

GEORGE C. WATSON.

The Modern Ficus Elastica.

There is no one plant, perhaps, that has grown as fast into popular favor as the "rubber." In every collection of house plants there is almost sure to be found one or more specimens. It's beautiful, glossy green leaves, coupled with the sturdy growth and its freedom from disease makes it an ideal house plant. The great and increasing quantities which have been produced and sold in the past five years shows a demand that the most sanguine grower of ten years ago would have deemed impossible.

Modern methods of growing have helped the growers to keep pace with the demand and incidentally by economical methods in propagation and handling large quantities to help along its popularity by lower prices. The variety most favored is F. elastica var. Belgica. This form is largely grown in Belgium, hence the name. Large quantities of rooted cuttings are annually imported early in the spring and grown on for the fall and winter sales. The young plants originating in this country from branch or single eye cuttings, however, constitute by far the greater part of the stock grown.

While the straight single-stemmed plant from twenty-four to thirty-six inches high in a 6-inch pot is still in good demand, the branching form, low and bushy, with from three to six branches, in the same sized pot, is much favored. Robert Craig & Son, of Philadelphia, have made a specialty of plants of this form the past few years and the accompanying illustration is from a photograph of a plant from their stock. This specimen was a cutting taken in February, 1901. In about two months the center was taken out, when every side bud started. During the month of May the plants were plunged in hops over a bed of manure. This bottom heat induced a quick root growth, followed by a pushing out of shoots or branches. About the last of June the stock was plunged in soil outside, under a temporary shelter of muslin, which was removed about the first of August. The plants seemed to be always on the jump and were by autumn healthful specimens of branched rubbers, fac-similies in minature of their more aristocratic and two-year-old parents. The plant here pictured has six branches, which rise about thirty inches above the pot, with about the same spread.

Such an interest and pride is taken in these plants by the owners, that an amusing controversy was started in one of the Philadelphia daily papers the past summer by a householder referring with pride to a specimen which he declared was the finest in the city. This called forth dozens of replies and offers of money to back up the opinions of others

ELEVEN-MONTHS OLD FICUS IN 8-INCH POT.

who were willing to place their plants in competition. K.

[Another of the accompanying illustrations shows a branched ficus grown in

eleven months by C. H. Kunzman, Louisville, Ky. It is in an 8-inch pot, stands twenty-eight inches high and is naturally branched, not having been topped. The other illustration is of a nine-months-old self-branching plant grown by Fritz H. Dressel, of Weehawken, N. J.—ED.]

Burbank's Shasta Daisy.

The latest novelty from Luther Burbank's experimental gardens at Santa Rosa, Cal., is the Shasta daisy, which Prof. L. H. Bailey says promises to at once take rank as one of the very best garden flowers. The plant is very hardy and not particular as to soil or treatment. It blooms for several months, nearly all the year around in California. The flower is large, fully three inches in diameter, and has three or more rows of petals of remarkable whiteness, on stiff, wiry stems of great length. The plant is botanically classified as Chrysanthemum Leucanthemum hybridum. It was produced by crossing the weedy but free flowering American species with the European and Japanese species, followed by a long period of rigid selection. The accompanying illustration shows the Shasta daisy, about one-half natural size, with one of its parents. Mr. Burbank has several new and distinct forms of the daisy, some perfectly double and some with well defined colors in the petals, but these are not yet ready to send out.

SHASTA DAISY, ONE HALF DIAMETER, AND ONE OF ITS PARENTS.

A Little Sermon For the Carnation Grower.

The carnation convention has come and gone, and those of us who were fortunate enough to be there have had time to "boil down" in our own minds what we saw and heard, and lay our plans for next year. What a pity every man in the country who grows carnations could not have been present. What a shaking up it would give some of the fellows who are going placidly along in the old rut, year after year, growing the same old antediluvian varieties in the same old haphazard, hit and miss manner.

Some people won't read and won't listen to what is told to them. If they could all go and see—just once! I verily believe that if they could all be gathered together next year at Brooklyn, could see one exhibition, and hear the talk both at the regular sessions and among the little knots of kindred spirits who gather together and "talk shop" between whiles, the "crap" crop of the country would be reduced ten per cent. The tremendous amount of bad stock produced each year is more due to the growers not knowing how bad it is, than to their inability to produce better.

Another quality quite commonly found in the make-up of the contented "crap" grower is an aversion to paying money for stock. He won't touch a new thing until he can trade something for it—that is, until it is no longer a new thing. One would, of course, certainly not wish to go on record as advising the general run of growers to go heavily into the first year novelties, but by the second year everyone who has his wits about him, and reads and listens carefully, can spot the winners and buy at least a few hundreds of some variety to advantage.

Time was when having good reports of a novelty sent out by a hybridizer with a reputation, one could safely buy 500 or 1,000, and with sales of cuttings, together with fancy prices for flowers, do very well. Sad to relate, except in unusual cases, that is not to be depended on now. The big fellows have taken to cutting prices so, of late years, that there is nothing in the cutting business for the smaller grower.

To return to the convention and the things there seen, one wonders why so many growers ship overdone flowers for competition. There were numerous cases of this kind at Indianapolis. One could note several vases of what would have been prize-winning stock, save that they were a little too old. Then, too, there was a sprinkling of seedlings which the visitor passed with a pitying smile, saying nothing, small, washy-colored, weak stemmed, worthless rubbish, often in no way so good as long ago discarded varieties. There is, probably, hardly a grower of 500 carnation plants in America who has not one or more seedlings or a pod or two of seed. When one thinks of this fact in connection with the fact that certain growers annually raise several thousand seedlings each, it should not be hard to realize that a carnation must be, to-day, phenomenally good to be any good at all.

Tastes differ about color and about form, and a medium sized flower if extra good in other respects can still be used; but there is one point on which there can be no dispute; that is the stem. All growers are practically agreed upon what constitutes a good stem. It must be rigid enough to hold the flower erect. Heretofore we have grown some varieties defective in stem simply because there were no better of their color to be had. We have now reached the point where this is no longer necessary, and it can be asserted that, barring accidents or phenomenal departures from existing types, no variety with a defective stem will ever again receive a certificate.

Every seedling grower must take this fact to heart. If the stem of any seedling is not stiff enough at all times, under reasonably favorable conditions, to carry the flower fairly erect—"rous mit it"—throw it away—get the temptation removed. The variety which has to be "coddled" to make it hold up its head will not do. No matter how fine the color and form, no matter how large the flower, or how fragrant, the dissemination of a weak-stemmed carnation can only result in damage to the reputation of the raiser which it will take years to live down.

Of course there is always the chance that by further crossing, the stem defect can be removed, but in general, it will be best to keep the weak-stemmed varieties out of all crosses.

And now, lastly, having produced a seedling with a good stem and enough other good qualities to warrant its dissemination, there is one duty so obvious and so necessary for the raiser's own credit that one wonders why it is so often neglected. The public must be told, and told truly, all about the variety and its little peculiarities. For instance, we are told in midwinter this year, by the raiser of a carnation which was widely distributed last spring that if not grown on the dry side and the temperature at all times

kept at or above 54° the flowers will come streaked. Another tells us that his variety will not stand nitrogenous food. In the case of another prominent introduction experiment has shown that a temperature of about 56° is necessary for best results. Now everyone knows that the usual night temperature is about 50°. Many growers habitually run their houses lower than that, and many houses are not piped so that an average of over 50 can be maintained. Now why, in the name of all that is reasonable and right should we not have known the above facts a year ago, and not have been led to invest in stock which requires treatment which we cannot give it?

W. N. RUDD.

Outdoor Chrysanthemums.

I have read with much interest the notes of Mr. May on this subject in the FLORIST of March 1, and I now feel some timidity in daring to dissent from the opinion of such an authority. For what little I may know of the bench culture of roses I have to thank Mr. May. What I may know of the outdoor culture of chrysanthemums I have from quite as good authority, good old, costly, cold-blooded experience. Had I been growing chrysanthemums for bread and butter I would now be penning these lines with a quill from my own wings, perhaps.

If anyone has spent more money and hard labor than I have trying to grow chrysanthemums out of doors I would not concede him to be more foolish, only to have more staying qualities. The Irish method is the one I found success with; that is, the way to grow chrysanthemums out of doors is to put a house over them. In other words, I am undertaking to tell you how to do something that cannot be done, except partially.

In the first place, early planting is all wrong in Alabama. June planting is good; July planting is better. There are nineteen kinds of pests that will attack your plants from the first warm weather to July. What chance has a man to fight this array of enemies in the open air? No need to take up your time with any more reasons. I planted in July and had Modesto seven inches in diameter with four-foot stems. The fishing is too good down here to put in three months fighting insects when you get better flowers from July planting.

Good drainage, no matter how it is obtained, rich soil and plenty of water handy, are what you must have to start with. Plant late and grow quickly. Stake as you would a bench of roses. Use wire stakes; anything else will harbor insects. Build a light frame over your beds and strip it with sash bars, spaced to suit your glass, lapped and tacked down firmly enough to prevent wind from blowing it off. The outside of your frame should be three feet from the ground. A strip of yard-wide sheeting tacked around this will give ample protection against wind, cold and dust. On warm days raise this curtain and let the plants have fresh air.

Have your plants so arranged that you can spray the late ones until they show color. Never undertake to spray plants showing color. Mulch deeply with cow manure and bone meal when the first buds appear, and water freely. After the glass is put on, which should be when first buds show color, fumigate once a week by vaporizing strong tobacco juice. Varieties are purely a matter of taste, but you will get the best results from those that open quickly, as Golden Gate. This, in brief, is how I have succeeded; every other conceivable way is how I have failed.

When I covered my plants ready to bloom with an opaque substance the weather always got cloudy, and a few dark days "done" me. When I covered with sheeting I always had a beating rain after a dusty spell when my flowers were the most promising, especially the white ones. If I did not cover them at all a long dry spell meant thrips. Then good-by opening flowers. Rain on an opening flower and then a good warm sunshine? Well, chrysanthemums are best raw. In my lifetime I have never known September and October to pass without one good hard blow, and I have never found any system of tying up to withstand it.

I could go on and enumerate dozens of other troubles equally essential to failure, so I am now convinced that chrysanthemums bloomed otherwise than under glass are disappointing. I know someone will jump up and say they have raised chrysanthemums out of doors. Yes, and so have I, but they were only good for a high shelf at a country wedding. I do not think that Mr. May has accumulated his comfort to old age by selling chrysanthemums raised out of doors.

Now a word as to varieties. The early ones are disappointing at best and would necessitate putting on the glass too soon. Robinson, Bassett and Marion Henderson are about as early as you want them. As I said above, varieties are a matter of taste, only the quick openers are the best for us down here. The very late ones give the best results. I have had Yanoma at New Year's that were perfect "peaches." Try a few plants of Dailledouze with all of the top bunch of buds left to bloom. The effect is immense. Leave some crowns and some terminals on your Warren and Carnot. The contrast is fascinating. A spray of Weeks is fit for a queen bride. A dear little Ivory at my lady's throat is fetching.

I never had a fine lot of Jones but that someone wanted them in a funeral piece. Speaking of funeral work, Fisher's Torch or Mrs. Drexel tied with ribbon to match are not bad. And so I might go through the list. But do not ask them to bloom out in the weather and be perfect.

F. P. DAVIS.

FUNERAL WREATH BY HENRY MORRIS, SYRACUSE, N. Y.

Rochford's Lorraine Sport.

The illustration facing page 239 shows a plant of Begonia Gloire de Lorraine, Turnford Hall variety, recently given an award of merit by the Royal Horticultural Society of Great Britain. The plant was exhibited by Mr. Rochford, son of the late Thomas Rochford. It has large white flowers, just tinted with rose, and a correspondent says it is "likely to chase

Begonia Caledonia out of the field altogether," as it is of much stronger growth, and more free flowering. Grand plants were shown in 5-inch and 6-inch pots.

Wreath of Leucothoe and Violets.

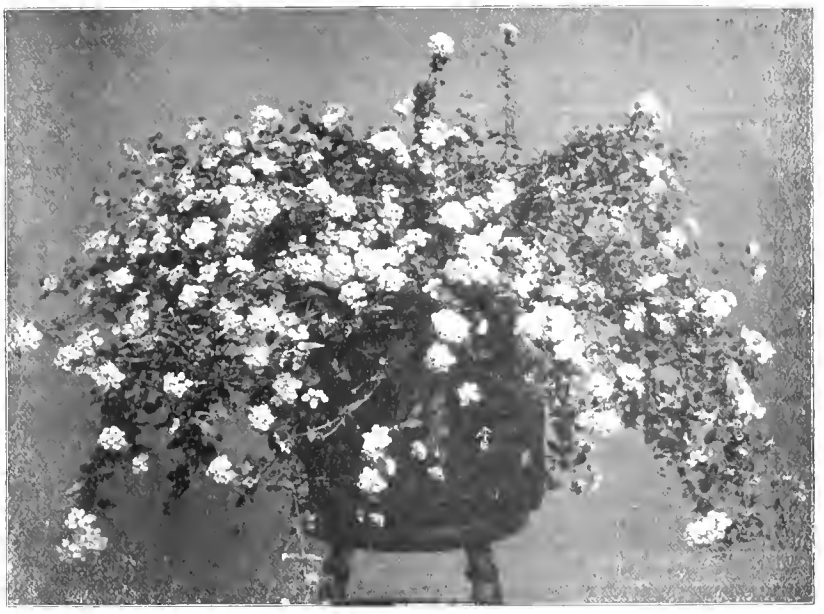
The illustration on the opposite page shows a funeral wreath made recently by Henry Morris, of Syracuse. It was three feet in diameter and one section was of leucothoe leaves, with a little magnolia foliage mixed in. The other side was made of violets and palm leaves and the ribbon was violet.

A Weeping Lantana.

The accompanying illustration is from a photograph of a weeping lantana which had served all summer as a hanging basket and later had spent two weeks as a decorative plant in the parlor. It has certainly lost some of its bloom in moving about, but it will give an idea as to how this beautiful plant can be utilized.

The cuttings were struck January 25, 1901, and the young plants were kept growing on in pots until March 25, when four of them were potted in an ordinary hanging basket and given a place near the glass. The soil used was a common garden loam, with a small quantity of bone meal and horn shavings mixed thoroughly through it. By June 1 the basket was full of bloom and was suspended on the veranda, care being taken to give it plenty of water and turn the basket around so that the sun might have an opportunity to reach all sides. The plants bloomed more or less all summer and in the autumn the basket was taken indoors and returned to its customary place, near the glass. In a short time the lantana had taken on full bloom again and the basket was removed to the parlor, the wires simply being removed and the basket placed on a small table. If careful attention is given to watering, the plants will keep on blooming for a considerable time.

The lantana is of a graceful, drooping habit and the flowers are of a most delicate color, brilliant rosy lilac. A cluster of flowers is produced at each leaf axil. In my estimation the plant cannot be too highly recommended. D.



A WEEPING LANTANA.

Society of American Florists.

MEETING OF THE EXECUTIVE COMMITTEE.

The executive committee met at Asheville, N. C., on Tuesday and Wednesday, March 4 and 5. All the members of the committee were present with the exception of ex-President O'Mara and Messrs. E. Buettner and R. Witterstaetter.

Many communications of importance were read by the secretary, several of these being from nursery and florist firms in southern territory expressing approval of the plan to hold a convention in the south and promising co-operation.

The secretary's report indicated a prosperous condition in all departments of the society's work. The treasurer's report showed a larger balance on hand than has ever been before in the society's history, the amount on hand January 1, in the general fund, being $2,111 11, and in the permanent fund $1,574.68. The vouchers were examined, approved and found correct by a sub-committee of the board.

The new auditorium which is to be headquarters for the convention was visited and found to be admirably adapted for the purpose, and it has been secured for the society's use for the week of August 17-23.

Owing to the fact that there is no florists' organization in that section to whom the work could be delegated, the business of arranging for the trade exhibition was placed in the hands of the secretary, with instructions that the charge for exhibition space shall be reduced this year twenty per cent below the schedule of last year. It is expected that there will be a large and varied display, especially of the products of southern horticultural industry.

The subject of southern productions for northern consumption in commercial horticultural lines will furnish the theme for much of the discussion before the society during the convention meetings.

It was decided that a president's reception should take place in the same manner as heretofore, and arrangements will be made for an illustrated lecture on one evening.

An inspection of the facilities for the sporting members of the society was made and it was found that there are at present two sets of bowling alleys and two more are to be built this spring, so that there need be no solicitude regarding accommodations on this line. It is also expected that the members fond of trap shooting will be given an opportunity to test their skill in competition with some of the local celebrities. Messrs. Robert Halliday and A. B. Cartledge, with one other member to be chosen later, have been appointed by President Burton a committee to take charge of the sporting events.

In accordance with the vote passed at the convention in Buffalo last year, the secretary was instructed to send a circular letter to bulb growers throughout the country, asking that they make a display of their products at this convention, and making the stipulation that all such growers shall have free exhibition space for the display of one dozen each of such varieties as they may desire to show, the bulbs thus contributed to be the property of the society, to be used for testing purposes as to their forcing qualities during the following season, and a report thereon to be made the next year.

A sub-committee having been appointed to consider the matter of the distribution of S. A. F. medals through other societies, made the following report, which, after full consideration, was adopted:

Your committee on the distribution of medals by the S. A. F. through floricultural organizations, appointed to make recommendations regarding the donation of such medals and the manner of awarding same, beg to submit the following for the consideration of the executive committee:

First.—Your committee having in mind the widespread interest and keen competition in several states created by the offering of medals by the S. A. F. and the consequent benefits to horticulture thereby engendered, would recommend the continuance of their distribution.

Second.—Your committee would recommend that one silver and one bronze medal be offered by this society to be awarded for new and meritorious plants or flowers of American origin exhibited at a regular public exhibition; said medals not to be awarded unless the plants and flowers exhibited are entirely worthy of such award, through the following organizations:

Chrysanthemum Society of America,
American Carnation Society,
American Rose Society,
Massachusetts Horticultural Society,
Pennsylvania Horticultural Society,
Horticultural Society of Chicago,
Newport (R. I.) Horticultural Society,
Society of Indiana Florists,
New Jersey Floricultural Society,
New Orleans Horticultural Society,
New Haven Horticultural Society,
New York Florists' Club,
Cincinnati Florists' Society,
Baltimore Gardeners' and Florists' Club,

and such other organizations as the executive committee in their judgment may designate.

Further, that the medals already offered to such of the foregoing societies by the S. A. F. for the purposes named above, and which on account of local circumstances have not yet been awarded shall not form part of the distribution contemplated herein, and shall be at the disposal of such societies until awarded; provided, however, that two medals of equal value shall not be awarded through any one society in one year.

Third.—An exhibit or exhibits competing for these medals may be shown at any regular public exhibition held by any of the foregoing specified floricultural organizations, but no plant or flower having won the society's medal three times shall be eligible to compete again for a similar medal.

Fourth.—The official report of the details of said awards with the name and description of the plants or flowers to which said medals shall have been awarded shall be furnished to the secretary of the S. A. F. for the purpose of record.

The question of the identity of the rose known as Helen Gould came up for discussion, and after a full expression of views by the members a vote was passed as follows:

WHEREAS, the matter of the synonymy of the imported rose Balduin, which rose has been known and sold variously as Balduin, Columbia, Red Kaiserin and Helen Gould, having come to

the attention of the executive committee of the S. A. F. through the secretary, in his laudable endeavor to have his published record of new introductions correct, the correspondence as had by him with several interested parties having been presented to that committee, and

WHEREAS, the communications published in the trade papers upon this subject convince the executive committee that the matter of synonymy of said rose Baldwin has been definitely settled by a committee of the Florists' Club of Philadelphia appointed to investigate same, be it

Resolved, that the executive committee, while deprecating the action which made necessary the work of the said committee of the Florists' Club of Philadelphia, compliments that committee on their exhaustive labors which have resulted in establishing said synonymy, and while appreciating the estimable service rendered by said committe of the Florists' Club of Philadelphia to the trade and the public at large, the executive committee consider that no further action in the premises is necessary on their part.

Resolved, that a copy of these resolutions be forwarded to the Florists' Club of Philadelphia and also published in the technical press of the country.

The committee would recommend the re-establishment of the nomenclature committee of the S. A. F., to whom all matters of similar import in future be referred.

It was decided that when the selection of the next convention place shall come before the society the polls shall remain open for at least one hour for the convenience of those desiring to express their preference.

A communication regarding the proposed United States laws in reference to the inspection and fumigation of nursery stock was referred to the legislative committee of the society.

In compliance with an invitation from the secretary of the Horticultural Society of New York, ex-President O'Mara was appointed a delegate to represent the S. A. F. at the Plant Breeding Conference which is to be held in New York city this year.

The president reappointed the present legislative committee, also the present incumbents of the office of botanist, entomologist and pathologist.

It was announced by Vice-President Deake that it was the purpose of the local people to entertain the visitors next August with a drive through Biltmore and a ride to Overlook Park. At the latter place, which is 3,000 feet above the sea level, an old-fashioned water melon eating will be on the programme.

Season tickets for each member of the executive committee admitting to the rose exhibition in New York city were received from Secretary Barron and a vote of thanks accorded therefor.

A sub-committee, appointed for that purpose, presented the following final resolutions, which were unanimously adopted:

We, the members of the executive committee of the S. A. F., in meeting assembled, desire to express our thanks to the Asheville Board of Trade, to the Idlewild Floral Company, to the Elks Lodge of Asheville, the Biltmore Estate, Messrs. Branch & Young, proprietors of Swannanoa Hotel, for the unbounded hospitality and many courtesies shown us during our stay in this city, also to the daily press of Asheville for the liberal notice given our proceedings.

WM. J. STEWART, Sec'y.

LOCAL HOSPITALITIES.

The members of the executive committee were tendered a banquet at the Swannanoa Hotel on the evening of Wednesday, March 5, by the Idlewild Floral Company. It was a very enjoyable affair, the dinner being served in a style reflecting great credit on the proprietors of the Swannanoa and the after-dinner speeches being full of enthusiasm. Mr. Barnard, who said he had come as the representative of McCloud, the eloquent, who would have been on hand had it been possible, on behalf of the city of Asheville promised to turn over the keys of the city to the convention of August and that the citizens would do everything in their power for the comfort of the visitors.

President John Burton, speaking for the S. A. F., pleaded inability to fully express his feelings. He said that the society in selecting Asheville as its next meeting place had in mind the double object of conferring some benefit on its southern breathren and of reaping benefit itself by seeing what nature has done for that beautiful country.

President John Nichols, of the Board of Trade, eloquently seconded Mr. Barnard's welcome and paid a high tribute to the inspiring objects for which the S. A. F. exists and the noble mission of the flowers. He was followed by J. D. Carmody, who proceeded to convulse his audience with a series of stories direct from the neighborhood of Posey County and hoped that the snow storm then in progress would not be attributed to the arrival of the northern visitors. Messrs. Halliday, Sullivan and Cartledge then rendered a trio entitled "I'd like to be excused" and Alex. Wallace, after a few words expressing appreciation of the courtesies extended, sang "I love the lasses" with his customary success.

F. R. Mathison made a most eloquent speech and aroused much enthusiasm as he dilated on the grand horticultural possibilities of the south. He told of the many goods being imported from foreign countries which the south should produce and sell to northern florists, adding pointedly, "We want your way-bills." He referred to what arboriculture and gardening had done for communities, raising the value of real estate and making homes better and happier, and reminded his southern friends of the riches they were overlooking in not doing more for the horticultural embellishment of their homes. He told of his experience with imported grafted and budded rose stock could see no reason why a great and profitable business in these goods could not be done by southern growers.

Secretary Stewart spoke next in endorsement of what Mr. Mathison had said and Treasurer Beatty followed with a very pleasing tribute to the elevating influence of a love for flowers, which, with the S. A. F., is the ruling motive. The following telegram came as the dinner was in progress: "Horticultural Club of Boston sends greetings, hoping the enactments of this meeting shall be the keystone to the future prosperity of the society. "Signed," M. H. Norton, treasurer."

After the close of the banquet the visitors were escorted by the proprietor of the Swannanoa Hotel to the Elks' rooms where as the guests of the lodge they received unlimited hospitality. Songs of the south and songs of the north alternated in vociferous chorus and many friendships were developed that will be again cemented next August. The Elks are "jolly good fellows."

On Thursday the visitors were treated to a carriage ride by the Asheville Board of Trade. Vanderbilt's great estate at Biltmore was visited in the forenoon and the beauties of this famous place fully enjoyed by all. A warm greeting was extended by Robert Bottomly, the gardener, who escorted the visitors through the conservatories and was especially pleased to meet some of his old Boston friends. In the afternoon the Idlewild greenhouses and Overlook Park were visited. Vice-President Deake left nothing undone for the happiness and comfort of his guests.

DEFORMED EASTER LILY.

Deformed Easter Lilies.

Many complaints have been heard this season regarding the behavior of Japanese longiflorum lilies. The disappointment and loss to forcers from the failure of a large proportion of the bulbs to produce salable plants and flowers is a very serious matter, not only to the forcers themselves but to the importers and dealers from whom the bulbs are procured and who, individually and collectively, have to suffer the consequences of blame for conditions which they are expected to foresee and guard against. So far as we have been able to learn, the trouble complained of is not the disease which, a few years ago, was so prevalent in the Bermuda-grown stock as to almost entirely ruin the Bermuda lily business. That disease, while not entirely absent in the Japanese stock, is so little in evidence that it is causing no uneasiness, at least for the present. Our two illustrations show the trouble in question much more clearly than any description we can give. In one pot are three bulbs, each of apparently equal quality and vigor at time of planting. The result is one good plant and two worthless ones. The other photograph shows a single plant with the stunted growth and curly foliage which is all too familiar to the eye of the Easter lily forcer, and which, so far as practical results go, might as well be thrown into the dump heap at once, for all that can be had from it if it ever gets to blooming is the twisted and deformed buds so plainly shown on one of the plants in the other picture. A superficial examination of the roots shows no difference between the imperfect and the healthy plants. Tests to many of the most experienced growers disclose some very significant figures as to the aggregate losses this year, the proportion of bad bulbs running all the way from fifteen to nearly fifty per cent. One grower acknowledges having thrown away already fifteen thousand of the worst out of fifty-five thousand plants. The photographs reproduced herewith were taken in his houses since and are good evidence that he has many more to dispose of in a similar manner. He states that his stock was purchased from six different dealers and the results from the various invoices differ but slightly. Another grower whose loss is over fourteen hundred out of four thousand bulbs says that the bulbs were all of the high-priced multiflora variety and were exceedingly handsome. They were received in early October and kept in a cool store-room until well rooted. Not only is it impossible to find any imperfections in the bulbs but it is often some two or three months after potting that the trouble begins to manifest itself, and thus, in addition to the cost of the bulbs, the grower loses the labor and room occupied up to that time.

Naturally the growers are earnestly seeking a way whereby they may escape a like infliction in future years. It is generally known that the English government has had an expert in Bermuda for some time past and the influence of his advice and assistance to the planters there is seen in the greatly improved quality of the bulbs brought from Bermuda the past season. The proportion of diseased bulbs has been very small as compared with other years, and it is evident that the Bermuda growers have learned the lesson that good stock cannot be grown on impoverished land and that if they put a bad bulb into the ground they will get a bad bulb out of it. One of the largest bulb forcers for the New York market has been experimenting with Japanese stock grown in Bermuda, but finds he can do nothing with it, for although this stock does elegantly in the Bermuda fields yet nothing can be done with it for early forcing here, it taking till May or June to get into flower.

DEFORMED EASTER LILIES.

As to the cause of the Japan longiflorum malady, theories are about as numerous as are the growers. The explanation given by B. Suzuki, of the Yokhama Nurseries, however, seems reasonable and, with his extensive knowledge of the subject, should be the correct one. Mr. Suzuki attributes the whole trouble to the practice of digging the bulbs before they are fully matured, to satisfy the demand for early shipments. He says that no trouble has ever been experienced with the lilies in the fields and no evidence of weakness found in the bulbs when shipped. If the American trade would be satisfied to receive their stock a little later he is confident that the difficulty would disappear. Naturally a dry season is more favorable to early ripening. Last summer was wet and, unfortunately, there were four or five days of heavy rain just at the time of digging. In order to comply with the demands it was found necessary to cut the green stems from the bulbs instead of waiting, as formerly, as sound judgment would dictate, until the stems had died down, and this practice has been getting more general each season for the past four or five years.

In support of Mr. Suzuki's opinion that late-harvested bulbs would give more certain results in Easter forcing, several large growers have acknowleged that there is no advantage in handling the very early stock. H. C. Steinhoff, of West Hoboken, has some longiflorums that will be in full flower for Easter which were not potted until after Christmas and points to two other lots, one planted in September and the other in October, which cannot be told apart.

A New Asparagus.

The plant here illustrated is one of a new variety of asparagus, the progeny of a plant which appeared five years ago in a batch of 200 seedlings. It was the only plant in the lot devoid of a tendency to climb. It only grows six inches high. The seed was taken from a plant of Asparagus tenuissimus and growing near it were plants of A. deflexus and A. plumosus. I think it will prove a valuable plant for fern dishes, as it propagates readily, both by division and cuttings. Last year at Philadelphia it was awarded a first-class certificate of merit and at Boston it was given honorable mention.

WM. THATCHER.

The Spring Season and the Grower.

The spring work of the plant grower is a large subject, so large that but a few phases of it may be considered in a short article, for the duties of the grower seem to multiply with great rapidity as the days grow longer and the increasing sunlight stirs up the plants to renewed effort. In addition to this there is the Easter rush to be considered and the effect that the business of that period will have upon the routine work of the place, for even the best regulated establishments sometimes become irregular when practically the whole force have to hustle to get out orders on time.

Extra help may perhaps be had, but even so the inexperience of the new hands may complicate matters to come extent, and although a most important and profitable part of the year's trade is included in Easter week, it is also a time of much anxiety to the managing end of the business, and there is a feeling of relief when the last load of plants leaves the packing shed that can only be likened to that of a boy when the last day of school arrives before the long vacation. But the growers' vacation by no means begins with the conclusion of the Easter trade, time and space both being too precious at this season to permit of any waste of either, and one of the first duties is to get together the left-overs and to set up the remaining stock so that all available space may be at once put to good use.

As to just what profit per square foot should be realized each year from greenhouse space is still quite an open question and would vary greatly with the locality and value of property that may be used for this purpose, but all will agree that the man who produces the greatest number of crops of good quality from a given space each year is the most likely to come out a winner at the end of the year, provided that his crops are adapted to his market.

To the grower who handles a general stock of plants, the bedding plant trade is the next matter of importance after Easter is past and no time should be lost in spreading out and potting on all stock of this character that may need more room, for a trade can be built up for good, stocky, well furnished geraniums, heliotropes, fuchsias, verbenas and other old favorites, even though there may be someone else who offers rooted cuttings and thumb-pot stock at ruinously low figures. Memorial day finds a market for many such plants among the thousands of flower lovers who may not be able to afford to buy a large Crimson Rambler rose or a hydrangea for cemetery decoration. Flowering plants appeal to the public in the springtime, and a very attractive display may be made with cinerarias, Chinese and hardy primroses, pans filled with English daisies or with pansies, while our old friends, the mignonette and sweet alyssum, find many purchasers when well grown in pots or pans. By well grown is meant not only with a quantity of flowers just opening but also with sturdy and deep colored foliage that indicates a continuance of growth and flower for some time to come.

The Chinese primroses are very showy and also last for a considerable time in bloom when grown in a cool and well ventilated greenhouse, one of the requisites for their successful culture being a rather open soil, it being remembered that in Western China in the one locality

A NEW DWARF ASPARAGUS.

in which the original species has been found growing wild, the Chinese primrose grows on ledges of rock where no soil is found except a sprinkling of disintegrated rock and the decayed vegetable matter from preceding years of growth, and that in such an apparently uninviting location these primroses grow and multiply and flower most abundantly.

Primula obconica is now quite largely grown among winter and spring flowering plants, and, like its relative, P. Sinensis, has been greatly improved by selection and careful cultivation, and has also shown much variation in color. Of the hardy primroses, the common English primrose, P. vulgaris, and the cowslip, P. officinalis, are among the most popular and have also produced many varieties under cultivation, some of the latter being quite distinct in color and size of flower, while others have produced double or semi-double flowers.

Another of the nearly hardy primroses, and one of the most showy of the genus, is the Japanese primrose, P. Japonica, a strong growing species with large dark green leaves and flower spikes that on a strong plant will grow eighteen inches to two feet in height and produce successive whorls of large flowers of dark crimson color. This species is also readily raised from seeds, the latter germinating quite quickly when sown as soon as they are ripe and treated as one would the seeds of the Chinese primrose.

The seeds of all primulas are very small and consequently should be sown in fine and well prepared soil and watered very carefully in order to prevent washing out the seeds or drowning the seedlings. As soon as the seedlings are large enough to be handled conveniently they should be pricked out into flats and protected from the full sunshine, and in due course of time may be potted off into small pots It is advisable to continue to protect the young primulas by means of some light shading material throughout the heat of summer, and to shift them on into larger pots before they become stunted, a good blooming size being grown in 5-inch and 6-inch pots.

The Abyssinian primrose, P. verticillata, was also grown to some extent in this country from twenty to twenty-five years ago, and a very interesting and pretty plant it is, the long and slightly toothed lanceolate leaves being covered with white, mealy powder, and the flower spikes rising to about one foot in height and carrying whorls of bright yellow tubular flowers. This plant seems to have dropped out of sight to a great extent of late years, and would probably be hailed as a valuable novelty by many people were it re-introduced with a proper florish of trumpets as the "wonderful silver primrose, the favorite flower of the King of Abyssinia" or something of that character. But putting levity aside, the Abyssinian primrose is a charming little plant, being both sweet-scented and attractive in appearance, and is worthy of wider distribution.

The cinerarias are now coming into bloom and make a brave showing among the cheaper grade of flowering plants for the spring, the great variety in coloring and the abundance of their flowers giving them favor everywhere. These same cinerarias are gross feeders, owing to the large and succulent growth there is to be supported, and as the flowers are forming it is good practice to keep them well supplied with moisture in the form of liquid fertilizers. Green aphis is also very likely to appear on both primroses and cinerarias at this season, and as neither of these plants stand fumigating with tobacco stems very well it is a better method to apply the nicotine by the milder plan of spreading tobacco stems among the plants. A dusting with snuff will accomplish the same end, but as some of this preparation may remain on the foliage the use of the stems is more cleanly.

Once again there is a loud murmur from various growers that the Easter lily bulbs are defective, and great losses have ensued, the worst case of which I have heard being a loss of about eighty per cent of the bulbs that were planted on the part of a large grower, and is not only a very discouraging, but is also a serious loss from a financial point of view. Another thought that strikes the average observer is the great number of different forms in growth and habit that appear among a houseful of Easter lilies nowadays, some plants many flowered, some few flowered, some broad leaved, others narrow, some dark stemmed and others light, and thus onward *ad infinitum*, until one cannot help harboring the suspicion that the enterprising foreigner has watered his stock, so to speak, with many seedling lilies instead of continuing the slower process of propagating known forms by means of scales, even though the said foreigner may be well aware that seedling lilies are extremely variable.

ASTER LÆVIGATUS AS A POT PLANT.

COLEUS THYRSOIDEUS IN 4-INCH POTS.

AN OLD SUBJECT AND A NEW CLAIMANT FOR POPULAR FAVOR.

Coleus Thyrsoideus.

The accompanying illustration is from a photograph of a group of 4-inch pot plants of the new Coleus thyrsoideus. It will serve to show what can be done with this plant in a short time. The plants photographed were propagated early in October and were allowed to grow to a single stem. If these had been potted up three, four or five to a pot they should have made handsome specimens.

J. D. EISELE.

Michaelmas Daisies in Pots.

There are many distinct species of asters which are included as Michaelmas daisies but, though the original species is very pretty, there are not many that are showy enough to command much attention for florist's work. Even those which might prove useful have generally been grown under conditions which do not admit of the fullest development of their natural beauty, but during the last few years many very pretty garden varieties have been added and there appears to be plenty of scope for further improvement in these useful autumn flowering plants. This fact is now recognized by some of the best English growers, who are looking for fresh subjects with which to experiment.

During the past season asters were a most prominent feature in all hardy-plant exhibits and not the least interesting was the large collection of plants, representing about 150 species and varieties which were grown in pots by an English nurseryman. Of course there were many which proved of little value as pot plants, but from the lot a selection could be made of varieties which may be strongly recommended for florists' work. From the dwarf, bushy, compact varieties to those of a tall, branching habit, they give a good variety and are well adapted for general decorations or for the cool conservatory. Though quite hardy the flowers open better under glass after we get cold or wet weather.

The following is a good selection for pot culture. Many more might be added, but those named have all proved of great merit. Those of the A. Novæ-Belgii section keep up a succession of flowers longer than others and also give a good variety of colors. The varieties are: Irene, Perle Lyonnaise, Arcturus, St. Patrick, R. Parker nanus, W. Marshall, Cottage Maid, Florence, Nancy, Calliope, Maidens Blush, Janus, Decorus, White Spray, Minerva and Formosissima. Good sorts of the A. Novæ-Angliæ section are Precocite, Mrs. J. F. Raynor, W. Bowman and Perchellus. Other good sorts are Tradescantia, Coombe Fishacre, paniculatus blandus and lævigatus.

For pot culture plants with single stems, or at most two stems, should be selected. They may be potted into the flowering pots early in the season. Good loam, stable manure and a good sprinkling of crushed bone should be used and the potting should be firm, leaving plenty of room for watering. A good size is 8-inch or 10-inch pots. Plunged in the ground and given plenty of water they will give very little trouble. After they are well established manure may be used freely. The earliest come into flower early in September and a succession may be kept up nearly to Christmas.

A. H.

THE California privet, Ligustrum ovalifolium, is enjoying steadily increasing popularity as a hedge plant and many nurseries report large demand for it.

Commercial Orchids.

[*Read by James Goodier, of Toronto, before the Canadian Horticultural Association.*]

There are some 6,000 species and varieties of orchids known to cultivation, but out of this number two dozen distinct kinds are about all the ordinary florist could hope to get profit from. A number of these could be grown in the least useful space in his houses, although to secure the best results they should be grown in a house by themselves.

Cattleyas, when well grown, come easily first as being the most profitable. About seven varieties are all that are required to give a succession of flowers for most of the year. Success depends entirely on a healthy and vigorous root action, and this is only attained by close attention to the ripening of the bulbs and careful watering. Proficiency in this respect is gained solely by practical experience; theory is of little use in orchid growing.

The first cattleya that was introduced was Cattleya labiata. This variety throws out its flowers in late summer and fall. Cattleya Percivaliana generally comes next in season, but if not kept pretty warm in winter it has a tendency to rot its flowers in the sheath. Cattleya Trianæ, C. Mendelii, C. Mossiæ, C. Gaskelliana and C. gigas all will follow more or less in rotation. Any florist having a few hundred of each of the above varieties should have no difficulty in producing flowers the year around.

The first five cattleyas named require about the same treatment. They like a plentiful supply of water at the roots when making their growths or bulbs, but as soon as the bulbs are completely made up, they must be rested by gradually withholding water altogether from

them, until such time as the bulbs are noticed to be slightly shriveled. Then each plant should receive a good soaking at the root and no more water till they appear to shrivel again. A man accustomed to cattleyas can tell at a glance when walking through a house which plants need water and which do not, without looking at the soil in the pots at all.

In the course of a few weeks the bloom will be seen to be pushing up in the sheath. Then the plants should receive more water until the flowers drop or are cut, after which they will require the same treatment they got before commencing to bloom for some time; then they will start to make the bulbs for their coming season's flowers.

Cattleya Gaskelliana and C. gigas are somewhat different from the above varities, for they commence to flower before the new bulbs are completed, but by the time the bloom is over the bulb is ripe and the plants will take a rest of six months or more before commencing to grow again. This ripening and resting thoroughly is the means of producing flowers, and also a greater number in each sheath, besides keeping the plants in better health, and will often prevent what is called second growth. But should these appear it is better to ignore them altogether; just treat the plants as though they were not there at all, for if these growths are encouraged they will soon play the plants out.

Under such treatment as I have here described I have had as many as eight large blooms from one sheath of Cattleya gigas and often six from C. Gaskelliana, and these from plants that had been under cultivation in the same greenhouses for upwards of ten years. Now, I have been told that we fellows from the old country keep cattleyas much too dry, but I have experimented more than once (besides witnessing the performances of others) by giving them a plentiful supply of water from the hose at all times, and found that they made very good growth in summer but never seemed to flower freely, and in a year or two they deteriorated so much that the dump was the best place for them.

Some growers have great success growing cattleyas on boards, others in baskets or cribs, but for the general florist pots or pans are the best, because they can be kept under better control and are more easily handled, besides always being ready for sale when a customer comes along.

The material for potting varies according to the grower's fancy, for some growers prefer leaf soil alone, others sphagnum moss, and some use peat and moss mixed together. I find three parts peat to one of moss answers very well. In potting raise the base of the plant a little above the rim of the pot. Always use as small a pot or pan as possible, and pot rather firmly. Always try to get the leads to face one way, for then, as the leads grow over the side of the pot and the plant needs repotting, the useless back bulbs can be cut off and it can be put back into the same size of pot, so avoiding over-potting, which cannot be helped if one lead runs one way and the other in the opposite direction.

Some varieties want potting just before they flower, others after they have flowered, but the best and safest time to pot, if it is needed, is as the young roots are pushing from the base of the new bulbs If work is too pressing when a plant needs attention, and the roots get too long, it is better to let it go for that season, for if any attempt is made to bury the roots that have been exposed to the air they will surely die, and the plant will receive a check. Potting or disturbing at the root too often must be avoided, for, if a plant is well potted, it should continue in good condition two or even three years. Most cattleyas have a tendency to roam over the side of the pot. If they should get too long it is as well to cut off the back portion and lay the stems on damp moss. A nice lot of young plants may be raised in this manner, if it is needful.

To establish newly imported plants the best way is to place them in pots filled with crocks and charcoal. Drive in a small stake, tie the bulbs neatly to it and give them lots of water. Soon roots will begin to run through the crocks; then is the time to place some good peat and moss firmly on the top of the crocks. If this were done earlier the material would get sour with the quantity of water that is often needed to plump up imported cattleyas.

Lælias seem to like much the same treatment as cattleyas, but require more moss to root into. Lælia purpurata is a fine, bold flower. It makes its growth in the fall and early winter months, but usually comes into flower for the June weddings. Lælia autumnalis flowers about the chrysanthemum season and, like Lælia anceps, with its fine, long stems, cannot be beaten for cut flower work. These two latter varieties do best in baskets hung from the roof of the house. In their growing season they like to be syringed pretty freely, but after the flower is cut they take a long rest and the moisture in the house is usually enough to keep them going.

There are quite a number of the cypripedium family that are suitable for the florist, but six varieties are about all he will need. Cypripedium insigne, C. Spicerianum, C. Leeanum, C. Harrisianum, C. barbatum and C. villosum are all pretty common and of easy culture. Being terrestrial they do best grown in pots. The potting compost should consist of good, fibrous loam, peat and moss. The bases of the growths are better placed below the rims of the pots; and in watering use the same judgment as when watering a palm; avoid giving too much or the soil will sour, thus causing the roots to rot. But they must not be allowed to ever get too dry, for they have no bulbs to store anything away in for a dry period, like a cattleya. They flower best when pot bound.

Cymbidium Lowianum and Cymbidium eburneum also do best under the same treatment as cypripediums, and their great lasting qualities should give them a place. Cœlogyne cristata is all right as a white flower, but it fails to last long when cut. It is a plant that takes water copiously when growing, and not so much when its bulbs are completed.

Vanda cœrulea, one of the few blue orchids we have, is a grand thing and seems to do well under cultivation. It should be placed in a pot of crocks and charcoal, with a layer of moss on the top, and if it gets the syringe among the stems and roots every day during summer it will thrive and flower well.

Lycaste Skinnerii is fine as a pot plant and does well for decorations when in bloom, its lasting qualities are so great, but it appears to bruise very easily. It succeeds well in good peat and very little moss, but in winter must be kept dry or it will soon be ruined by a disease called black spot.

Oncidium varicosum and Oncidium tigrinum, with their beautiful and taking yellow flowers, seem to be of quite easy culture They do the best grown outside during summer, behind a north wall, on a slat stage with a light canvas shade to protect them from the sun. In the winter they should be grown among the cattleyas and kept quite dry at the root.

Odontoglossum crispum and O. Pescatorei do well under the same treatment in summer as oncidiums, but should be wintered in a fern house, and must not be allowed to get too dry at the root. A mixture of fibrous peat and moss with a little charcoal suits these cool orchids best.

Of the dendrobes perhaps Dendrobium Phalænopsis is the best for the florist. It succeeds well hung on the roof, grown in very small pots or pans with a little peat and moss, and should seldom be disturbed at the root. The frequent use of the syringe will give it all the water it requires during the summer. In the winter it needs a very long rest, and must be hung in some dry, sunny place. In the spring, when it commences to grow, it should have a little moss pricked in among the roots, which will help it for the season. It flowers freely from both old and young bulbs.

Dendrobium formosum with its white, cattleya-like flower, is very useful for designs and requires the same treatment as D. Phalænopsis, but it degenerates very much under cultivation and must be periodically renewed. The good old Dendrobium nobile is still among the first for button-hole work, but in this country it is seldom seen to perfection. The heavy firing for so many weeks in winter seems to play havoc with it. Endeavor to keep the roots healthy or it will be a sure failure. It makes good growth in either pots or baskets, and seems to like peat and moss mixed with charcoal and broken crocks to root into. To flower the plants successfully the bulbs must be well ripened by wintering them in some cool, dry, sunny place.

Should the florist go in for raising crotons and dracænas or other stove plants, I advise him to try a few plants of Dendrobium Phalænopsis, for in such a temperature as these plants desire this dendrobium thrives finely. The plants do well grown in baskets hung on the roof. The baskets should be filled with crocks and charcoal and a layer of sphagnum moss on the top; avoid watering overhead or they will soon rot off at the collar, but they need to be kept wet at the root while growing or flowering, after which they are better on the dry side, only enough water being given to keep the leaves plump. When the new leaf first appears, which will be about the month of May, the plants should have all the old moss picked out from them and the dirt washed well out of the crocks with the hose. A little fresh moss is placed around them and they are then all right for the summer, but on no account should they be disturbed till the young or new leaf makes an appearance. Give D. Phalænopsis a night temperature of 70°, with lots of moisture. Give no air in the daytime till the thermometer stands at 90° and they will pay as well as any orchid grown, with perhaps the least trouble.

The house best suited for orchids is an even span roof with top and bottom ventilators There should be an open lath or slat stage in the center of the house, built in the shape of steps or tiers, and just high enough to see each plant comfortably from the path. Cattleyas do far better on a stage of this description than

A WREATH OF SPRING FLOWERS.

they do it hung from the roof near the glass. The summer seems to be too hot to grow them in this manner with satisfaction in this country. Around the side of the house an open slat stage should be built, which is suitable for cypripediums, etc. In winter time, when there is heavy firing, the house should be damped with the hose twice a day, between the pots and under benches, but in summer time, when the fire is out, once a day is usually enough. The best time to use the hose is in the afternoon, between three and four o'clock. A night temperature at all times from 60° to 65° is right.

In giving air make the most use of the bottom ventilators. Never open both top and bottom ventilators at the same time, for if this is done the moisture is driven out at the top, and this moisture is what is wanted for success in orchid growing. The top ventilators may be used with advantage at night during summer, as it is a good plan to give a chink of air from the top an hour or two after the house is closed in the afternoon. This may be left on till morning. Avoid the use of cement paths or floors. There is nothing better than ashes.

Now, the obstacles the florist will have to contend with will be many before he will be able to make a financial success of the venture. It will take a large amount of capital to fill a 100-foot house. To secure a first-class professional grower will be found another difficulty, although there are very few florists looking for a position who will admit that they do not understand orchids. Yet I see no reason why ninety-five per cent of each of the species I have here written about should not do well in this American climate, and increase in size year by year. If what I have attempted to describe is followed, the returns from such a house ought to be equal to the same space devoted to any other class of plants and be a good source of income without any additional outlay for years after the first expense.

The great time the flowers will last on the plants in good condition is much in their favor, for they can be left till the demand arises for them. If the retail florists knew where orchid flowers are always on hand they would be able to dispose of a greater number than they do as it now is. Most orchids want to be open a full week before being cut, for then they are better developed, better colored, they stand better, ship better, and give better satisfaction generally.

Boston.

ASSOCIATION OF GROWERS HOLDS HIGHLY SUCCESSFUL CARNATION EXHIBITION.—EXHIBITORS AND PRIZE WINNERS.—TRADE FAIRLY ACTIVE — PROSPECTS FOR A VERY BUSY EASTER —EDGAR HAS NOVELTIES.—PIERCES EMPLOY LABOR SAVING DEVICES. — VARIOUS NOTES OF LOCAL DOINGS.

The annual exhibition of the Co-operative Flower Growers' Association, which was held at the Park Street Market on Saturday, March 8, brought out a superb display of carnations, among which were all the important novelties of the New England growers for this season. Among the largest exhibitors was Peter Fisher, whose Enchantress, which took a first prize; Gov. Wolcott, which took a second prize, and Mrs. M. A. Patten, were the only three seedlings scoring enough points to entitle them to a certificate. The score was: Enchantress, light pink, 97 points; Wolcott, white, 96 points, and Mrs. Patten, striped, 95 points. As a light pink, Enchantress was simply unapproachable. Mrs. Lawson, as shown by M. A. Patten, was of a quality never excelled and seldom equalled. Mr. Patten also showed Gov. Wolcott, Morning Glory, Lorna and Gov. Roosevelt, each of the latter three taking a first prize, and Marquis, which took a second prize. Wm. Nicholson showed Floriana and a fine collection of standard varieties. Geo. E. Buxton won first with his Mrs. Bradt and G. H Crane, and also showed Lawson and Marquis in good shape. L. E Small was second on Crane and E. Cartwright on Flora Hill. Other exhibitors of standard varieties were Paul E. Richwagen, S. J. Goddard, J. H. Leach & Son and Coolidge Bros Among the new things, C. Warburton's Cressbrook, showed up well. S. Littlefield showed Goodenough, white; A. Roper, Fair Maid, light pink, also a scarlet and a striped seedling; M. L. Tirrell, Liberty, cerise; Geo. Hemingway, King Philip, deep cerise; Mrs. Geo. Butterfield, Vesuvius, scarlet; W. S. Nichol, Wild Rose; Sam. Wheeler, a white and cerise seedling; J. H. Newman, a white seedling; J. H. Leach & Son, a pink and a light pink seedling, and C. Cummings, a pink seedling. Norris F. Comley made a display of violets, unprecedentedly good, which brought him first prize on Imperial. Mr. Sim was also a large exhibitor of violets, winning second prize with La France. John R. Comley, E. F. McGrady, G. W. Ayer, J. S. Philbrick and J. S. Smiley were well represented in the violet displays, the latter taking second with Campbell. Robert Montgomery received first prize for Bride roses. E N Pierce showed mignonette and S. J. Goddard antirrhinums. L. H. Foster exhibited his improved form of Boston fern in fine shape. Among the visitors were J. A. Valentine, Denver, Col.; Judge Hoitt and G. E. Buxton, Nashua, N. H.; A. H. Lange, Worcester; C. Warburton, Fall River; E. O. Orpet, So. Lancaster; A. Jahn, New Bedford.

Trade reports from this vicinity, taking the entire field of plant growers, flower growers and retailers, indicate that business throughout New England is holding its own and that in most lines aggregate sales are fully up to the record of corresponding date in recent years.

The promise is bright for a spring trade of enormous volume and there is no doubt expressed as to the results of the special Easter demand in either plants or cut flowers, although in the latter line it is generally accepted that comparatively low prices will prevail. The decrease in the values of most cut flower stock during the present month, as indicated in our price quotations, is quite heavy but, is in the main, legitimate and shows only the natural result of the advancing season and the consequent acceleration of the product. During the stormy days of last week general buying was very light, but the visit of Prince Henry of Prussia gave a lively impetus to local trade in the finer lines of flowers and helped out on the situation generally, besides affording our ambitious retailers an opportunity to exploit the flower trade publicly, which is always a good thing for business if done conscientiously and with some regard for the truth. This week, with better weather, the buying is well distributed and most of the stock coming into the market finds a buyer of some kind. Those growers who make Easter plant growing a specialty confess to have already accepted about all the orders they can safely undertake to fill and are disposed to hold back from soliciting any more Easter business for the present.

E. N. Pierce & Sons have in operation a sort of cable car system whereby lilies and other plants are taken from the benches and loaded on wagons with great rapidity. Each house in their range opens into a long, straight shed, through the entire length of which runs a flat car propelled by a cable worked by steam power. Through the center of each house is a track on which runs a small hand car on which plants are placed as removed from the bench and transferred to the door where the large car takes up each load as ready and delivers all at the wagon shed at the end of the long shed, where there are facilities for loading six teams at the same time.

Among novelties at W. W. Edgar's is Astilbe Gladstone. This recent introduction is a very graceful plant, a remarkably precocious forcer and well worthy of wide cultivation as an Easter specialty. Mr. Edgar has discovered among his seedling ferns a green form of Pteris Mayii which is much superior to the common little crested variety. Metrosideros is in full bloom three weeks ahead of last year, when it was brought into flower for Easter only with much difficulty. Mr. Edgar's explanation of this variation in its behavior is that the hot summer and consequent early ripening of the wood last year made the plants better subjects for forcing.

Anderson & Williams are still in the advance guard of the lucky rose growers of this section. Their Bride and Bridesmaid roses have the faculty of coming in right at the time when other growers are off crop. They have just completed the tying down of several large beds of Kaiserin roses for summer blooming.

On March 8 J. Woodward Manning gave a lecture, illustrated with fine stereopticon views, at the Town Hall, Arlington, on the care and the value of shrubs and trees on the highway. W. W. Rawson presided.

The American Park and Outdoor Art Association will hold its annual convention at Boston next August. A very comprehensive programme of lectures and essays is in preparation.

Messrs. M. H. Norton, F. R. Mathison, W. W. Edgar, P. Welch and W. J. Stewart have gone to New York to attend the meeting and exhibition of the American Rose Society.

At the monthly meeting of the Gardeners' and Florists' Club of Boston on Tuesday evening, March 11, W. N. Craig, of North Easton, gave an interesting talk.

Henry Penn is branching out and has now opened a conveniently located flower store at 43 Bromfield street.

Chicago.

TRADE ACTIVE —GOOD DEMAND FROM OUTSIDE —STOCK WELL CLEANED UP AT FAIR PRICES. — PROSPECTS FOR EASTER. — WHOLESALERS ADOPT UNIFORM PRICE LIST —CLUB MEETING —THE WITTBOLDS BEGIN UPON A FINE NEW ESTABLISHMENT. —LILIES EXPECTED TO BE SCARCE.— VARIOUS NOTES OF INTEREST.

Business has been excellent in this market this week, although the local retailers have not been particularly busy. There has been an excellent demand from outside, and the daily receipts have been well cleaned up in almost all lines. There has been a good demand for American Beauty, the call exceeding the supply except with regard to long-stemmed stock. Most of the cut seems to be either very long or very short. There is a prospect of a good supply of long for Easter, with hardly any medium lengths, and these are always the ones most in demand. The receipts of Brides and Bridesmaids have increased somewhat, but growers say that the plants are generally going off crop and that there is no prospect of an extrmely large cut for Easter, even should the weather be favorable, and several contingencies might serve to reduce the supply materially. The demand has continued for white stock, and Bride roses have shared popularity with white carnations. The receipts of carnations are not particularly heavy at present, but there are large quantities of colored stock which drag a little. With bright weather in the ten days preceding Easter, there should be all the carnations the market requires for that event. During the past two weeks there has been a good demand from outside sources for large lots of carnations at cheap prices, which has served as an outlet for a good deal of material which the street fakir has handled in the past. Bulbous stock in general is doing as well as one could reasonably expect. Tulips and daffodils seem to have a little the better of the demand. There are still large quantities of lily of the valley available, and calla lilies are in extra supply. In greens there seems to be enough of everything except adiantum, although the visible supply of ferns has been so reduced that the wholesalers are quoting $2.50 per thousand this week and will make it $3 for Easter.

The attraction at the Florists' Club meeting, March 12, was a splendid vase of the new rose, Ivory, from the American Rose Company, Washington, D. C. Anton Then exhibited two pans of Japanese longiflorum lilies. The plants were dwarf but attractive and received the two customary premiums. The same exhibitor had on view some seedling carnations, among them a rather interesting mal-formed variety, a seedling from the white Bradt, in which it is characteristic that two flowers develop on the same stem, one above the other, after the manner of arrangement of the flower clusters in hose-in hose polyanthus, but closer together. August Jurgens exhibited well grown lily specimen and some badly deformed samples of Japanese longiflorums, his loss in which has been about eighty-five per cent. In the plants that turned out good Mr. Jurgens found that the narrow-leaved variety produced the best stems and flowers. The broad-leaved variety produced dwarf plants in which the somewhat deformed flowers stand up almost straight.

The George Wittbold Company has let the contracts for the erection of its new range at Edgewood, on the St. Paul R. R., eleven miles from Chicago, where they have recently purchased thirty acres of land. As a beginning three houses will be erected, 27x300, with a boiler shed 25x54 of brick and stone, with quarters for the employes in the second story. A six-room cottage is also going up for the occupancy of Otto Wittbold, who will have charge of the new place. There will be a side track to the boiler house and nearly half a mile of roads are being made. It is proposed to have everything in the most modern shape and considerable money is being invested for the purpose of growing stock to large sizes. Incidental to this enlargement of the Wittbold business, the capital stock of the company is being increased from $48,000 to $75,000.

The Wholesalers' Association had a meeting Tuesday to which a committee of the Retailers' Protective Association came with the request that the wholesalers confine their sales to those in the trade. The matter was taken under advisement. It was the opinion of the meeting that the association members should publish a uniform price list. It will be found in this issue. It is official. What slight variations may be found in the lists in the advertisements of the members are due to the advertisements being already in type when the association's action was taken, too late to re-set the ads.

C. A. Samuelson is having frequent calls for table centerpieces of Prosperity carnation. He finds it appreciated for its unusual coloring, large size and splendid keeping qualities.

The new houses which Albert Amling is about to erect for asparagus growing will be twelve feet to the gutter, and it will be one of the most remarkable ranges of its kind when completed.

John Zeck, of J. A. Budlong's, was laid up with a sprained ankle last week and is now hobbling about on crutches, with a prospect of needing their assistance for some little time to come.

Henry Payne, at Hinsdale, will replace roses with asparagus next year and his output will consist almost exclusively of greens, Asparagus plumosus, Sprengeri, adiantum and smilax.

Flint Kennicott, president of the Kennicott Brothers Company, has been confined to his home for the past few days by inflammatory rheumatism.

Vaughan's Seed Store has been handsomely redecorated, the seed cases re-arranged and some new ones added for the season's business.

W. N. Rudd has been appointed local manager of the coming exhibition of the Chrysanthemum Society of America.

Frank Garland says that Cottage Maid tulip is the one item of bulb stock which is "hanging fire" this season.

Louis Gresenz of Bassett & Washburn, is building a three-story stone and brick flat on the north side.

Bassett & Washburn shipped a nice lot of carnations to Toronto Wednesday for the club show there.

Visitor: Chas. Siebrecht, of Winona, Minn.; B. Eschner, of M. Rice & Co., Philadelphia.

New York.

CLUB HOLDS AN INTERESTING SESSION.—PLUMB RESIGNS SHOW MANAGEMENT.—GOOD CARNATIONS SHOWN.—CUT FLOWER BUSINESS LAGS A LITTLE.—NO HEAVY CROPS IN SIGHT.—A BATCH OF PERSONAL AND TRADE DOINGS.

The monthly meeting of the Florists' Club was held at the Elks Hall on Monday evening, March 10. The session was devoted mainly to committee reports and other routine work and adjournment came earlier than is generally the case. The resignation of Wm. Plumb as manager for the Madison Square exhibition because of the state of his health was the principal item of the meeting. Mr. O'Mara, as chairman of the exhibition committee, discussed the emergency caused by the unexpected event and explained that it had been thought wise to now separate the proposed trade display from the horticultural section and place the work of arranging therefor in the hands of someone who would undertake the job on the basis of a percentage of the proceeds from the sale of space. As the matter of a proposed joint participation in the exhibition by the National Sculptors' Society is progressing favorably it was deemed best to defer for the present the selection of a general manager. The beefsteak dinner committee reported sufficient receipts to cover all expenses and were duly thanked and discharged. On the table was a vase of Governor Wolcott carnations from Peter Fisher, Ellis, Mass., which was greatly admired and to which the committee awarded 87 points, and the club gave a special vote of thanks. A box of Carnation Mrs. Potter Palmer, from the Chicago Carnation Company, intended for this meeting did not arrive in season. Messrs. M. H. Norton, P. Welsh and W. W. Edgar, of Boston, being present, were each called upon for a few words and Messrs. Wallace and Stewart rehearsed for the benefit of the club their experiences at Asheville the previous week, dwelling upon the good-fellowship and hospitality shown by everyone with whom they had come in contact in the south.

Cut flower business is very light this week and aggregate sales will be considerably less than for last week, notwithstanding the weather is much more advantageous for shoppers. It has been the rule in previous years that sales would fall off two or three weeks before both Christmas and Easter, so the present situation is not unexpected and it is not likely that there will be any appreciable revival until the actual Easter demand begins to develop. It is fortunate that in roses, at least, there is no excessive crop on; neither is there any great overstock in sight for the immediate future. The rose show has used up a certain percentage of the very fancy blooms but they are not seriously missed as it seems to be the experience of retailers generally that buyers are disposed to pass over the extra grade stock in favor of the medium quality in the Bride and Bridesmaid classes.

The occasion of the dinner to Prince Henry by Mr. and Mrs. Cornelius Vanderbilt gave J. H. Small & Sons an opportunity to display their taste in the floral decorations, which were very choice but not ostentatious. The decorations of the drawing room consisted of various choice roses, orchids, etc., in vases, and in the dining room red camellias were the only flowers made use of.

August Millang has leased the salesrooms which the New York Cut Flower Exchange has occupied for many years, and will continue it as a market in the same manner as heretofore, after the removal of the old association to their new salesrooms on Twenty-sixth street.

John H. Taylor gave the Boston visitors at the New York Florists' Club a ride in his automobile. It is said that Alex. Burns is looking up the price of these strenuous vehicles and will soon be the purchaser of one.

It is planned to have part of the block between Eighth and Ninth streets facing Fourth avenue made into a public park. There will be a suburban station at this point. The estimated cost of the property is $600,000.

Daly Brothers have bought the A. B. Murray place at Paterson, N. J., and will take down and remove the houses to Granton, where they will be re-erected and added to the large range of glass already there.

On Tuesday a section of ceiling at the salesroom of the New York Cut Flower Company fell down, but fortunately nobody was hurt. A lot of azaleas belonging to H. C. Steinhoff were ruined.

The market florists had their spring meeting for the rental of space at Clinton market on Tuesday evening, and the usual representation of plant growers was present and secured space.

Charles Schenck, of Traendly & Schenck, is suffering from a serious case of blood poisoning.

Philadelphia.

WEATHER STILL AGAINST RETAIL BUSINESS AND ALSO RETARDS PRODUCTION—GROWERS PUSHING BACKWARD STOCK.—LILIES A SHORTAGE.—LOCAL ROSE GROWERS MAKE A HIT.—VARIOUS NOTES.

There has been little, if any, improvement in the situation the past week. The weather has been wretched, first snow then rain, then more rain, and while this state of affairs was hard on the growers and kept the supply down, it also made it hard to sell the few flowers that were carried in stock. Prices have weakened a trifle on the best grades, while the lower qualities can be had at the buyers' price, if any considerable quantity is wanted. Prices range as follows: Beauties specials $6 per dozen; teas $8 to $10 per hundred; carnations $2.50 to $3 per hundred; violets 50 cents per hundred for doubles. Eisenhart is sending in some fine Lady Campbell. Bulbous stock is still plentiful; $2 to $3 is the price, with even lower figures on large lots. All hands are looking forward to Easter with anxious eyes. This is the critical period for the grower and house after house can be seen in which the thermometer registers away up and it fairly takes one's breath away on entering, the atmosphere is so stifling. Hydrangeas and lilies are the principal laggards. So many lilies have been thrown out the past season that even at 12 cents, the price most growers are asking for the flowers, it is a question whether many of them will come out whole on this important item of their stock.

Some of the rose growers of this neighborhood had a tussle with their New York brethren at the exhibition of the American Rose Society in the Berkeley Lyceum this week and, as usual, came off victorious. A vase valued at $250 and $50 in cash for fifty roses is something worth having, and Mr. Fahrenwold is to be congratulated on his success. Mr. Mortenson also wears a seven by nine smile, as his vase of Liberty distanced all the others, and there was some pretty fancy stock against him.

A few of "the boys" paid a flying visit to Baltimore last Monday to have a friendly match at tenpins It doesn't matter about the result, only we must say that a more whole-souled set of fellows does not exist anywhere. From the time one arrives until duty calls and he is reluctantly obliged to depart it is one continual round of hospitality. The Baltimore boys are certainly all right.

Harris has commenced the delivery of his shamrocks. They are certainly fine, showy plants and those in the shamrock-shaped pots should make a hit. K.

Cincinnati.

BUSINESS SHOWS LITTLE CHANGE.—SOME OF THE PECULIARITIES.—CLUB DISCONTINUES ITS EXHIBITIONS.—A NEW WHITE CARNATION.

Trade conditions remain about the same as at last report, with an abundance of bulbous stock on hand, a great deal of which finds its way to the barrel. It is a very strange thing with violets. One day there are not nearly enough to go around and the next there are plenty of them left over after the day's business is done. At present writing there are a fine lot of Princess of Wales on the market. Considering the great amount of roses and carnations received, they are cleaned up pretty well every day, particularly Bride and Perle roses and white carnations, which no doubt we can attribute to an unusually large amount of funeral work. Some extra choice Bridesmaid roses are coming in from Carl Schweitzer, which find a ready sale. His Marquis and Flora Hill carnations are also very good. This is Carl's first season of growing cut flowers and he is well satisfied with results.

At a meeting of the Florists' Society Saturday night it was decided to discontinue the monthly exhibitions, owing to a lack of interest on the part of a majority of the members. The work of arranging for the exhibits has always rested on a certain few, who devoted their time and money to the cause and are getting tired of it and want other parties to take hold now and continue the exhibits next season. Upon motion of J. W. Rogers the chair appointed Ben. George a committee of one to procure a photo of the late Edwin Hoffmeister and have the same enlarged to hang in the clubroom of the society. J. A. Peterson and Julius Schuman have resigned as members of the society.

C. C. Murphy has sold the entire stock of his white seedling carnation to Wm. Murphy, who will disseminate the same in another year. This seedling, a cross between McGowan and Bridesmaid, is the best white carnation received by the Cincinnati Cut Flower Company for the past two seasons, being a large double white on a good stiff stem, and the writer has to see the first bursted calyx. Will Murphy says he has 30,000 plants to put out as soon as the weather permits.

Ed. Foster, with Sunderbruch's Sons, received an order last week from Mexico for a bouquet of ninety American Beauty roses to be sent to a lady in this city who was celebrating her ninetieth birthday anniversary. It was a hummer and all one man wanted to do to carry it.

All the growers are expecting to do a large Easter business and are getting their stock in shape accordingly. D.

THE AMERICAN FLORIST

SEVENTEENTH YEAR.

Subscription, $1.00 a year. To Europe, $2.00. Subscriptions accepted only from those in the trade.

Advertisements on all except cover pages, 10 Cents a Line, Agate; $1.00 per inch. Cash with Order.

No Special Position Guaranteed.

THE Philadelphia spring show is to be held March 18 to 20.

THE expected advance in window glass has not yet materialized, but the tendency is toward stiffer prices.

THE design makers who have used gauze ribbon say that it is a most desirable addition to the list of supplies.

THE State Horticultural Society of Wisconsin has asked the state World's Fair Commission for an appropriation of $2,500 with which to make an exhibit at the St. Louis exposition.

THE latest is an automobile hothouse constructed for Baron de Rothschild for transferring plants from his country place to his residence in Paris, a trip which took two days by wagon.

ONE grower of early-delivered and late-delivered lily bulbs says that he has practically the same result with each. Does he know positively that the bulbs which he received were dug late in Japan? Even the lots received in this country by dealers are sometimes held until the close of the season, when they are sold out cheap as "surplus stock." Careful investigation of all these cases, with exact information regarding each, is really needed that right general conclusions may be established.

A Necessity.

ED. AM. FLORIST:—I am sending a dollar; please renew my subscription. Your paper is one of the items that an up-to-date florist cannot do without.

Anacostia, D. C. A. B. GARDEN.

Chicago Market Rates.

The Chicago Wholesale Cut Flower Association has adopted a price list for Easter, it being the opinion of the members that their lists should be uniform, since they all endeavor to sell "at the market." The official list appears on page 277 of this issue. Such slight variations as may be found in the lists of the several members are due to their being already in type when the association took action, too late to permit of re-setting all the advertisements.

Sterilization of Soil.

In a recent report of a paper read by Prof. George E Stone I note the above subject is treated of again. The Professor's remarks are very interesting, but the florist should note that he is talking from the standpoint of the lettuce grower—that is, the man who farms under glass.

It will be noted that the professor says: "In some cases freezing or drying the soil is effectual but it is not easy to freeze the soil in the greenhouse without removing it," etc. This may well apply to the lettuce grower who uses the same soil year after year, simply with the addition of manure, but the florist who commonly removes and renews the soil each year should not be misled by experiments made under different conditions.

Careful experiments have demonstrated that the eel worm which is so destructive to roses, is killed, both adult and eggs, by thorough freezing. It would seem, therefore, that the florist who commonly composts his soil outside, the fall before use, could destroy this pest by so arranging the pile that frost would penetrate to every part of it.

The writer, without having positive knowledge, is inclined to believe that contamination commonly takes place from the soil in pots in which the young roses are grown. If such is the case it becomes a question how much good sterilization of the main body of the soil will do. In the meantime it behoves the florist not to be led into this extra expense by results of experiments made under different conditions and for other crops. B.

Beauties for Easter.

ED. AM FLORIST:—Will you kindly tell me whether a house of Beauties cut back about a week before Christmas can be brought in for Easter? They were dried off and gradually run down to 32°. The shoots were about a half-inch to one-inch and a half in length in mid-February. Would it be a good plan to pick off the shoots? What temperature would be needed to get them in? H. A. D.

These Beauties, cut back as above described, would not produce long-stemmed flowers for Easter in the time given. It would be better to take off the buds of the short stems now being produced and save all the healthy foliage possible. This will help the plants to more active root action, which, in turn, will make the plants push up more vigorous shoots, particularly from the base. These will produce good flowers with fair length of stem. Gradually increase the temperature to normal and water as required. JOHN N. MAY.

Healthy Beauties But No Bloom.

ED. AM. FLORIST:—Will you kindly inform me through your paper why a bench of American Beauty roses with perfectly healthy foliage and roots, free from spot and spider, should fail to produce first-class flowers? The temperature has on several occasions been down to 50°. Should this make such a difference? C. T. M.

There is nothing strange about the action of these American Beauties, as with so much cloudy weather as we have had the past winter they are very apt to produce long, blind shoots or more strictly speaking fail to set buds on such shoots till they are very long. The only remedy is to tie them down at the bottoms, turning the tops up straight again, and wait until they will set buds, which will be as soon as the sun gets more power and the days are clear and bright to make the wood firmer. The low temperature has nothing to do with their failure to set buds, though of course as nearly an even night temperature as possible is preferable for nearly all roses forced in winter. JOHN N. MAY.

Arrangement of Piping.

ED. AM. FLORIST:—I have two attached houses, one 20x90 and ten feet to the ridge, the other 18x100 and eleven and one-half feet high. The land slopes to the northeast and the houses are built with a fall of eight inches. The boiler is one having nine sections connected on the top by a 9 inch pipe or header. It is placed on the highest part of the land, so that the header of the boiler is about nine inches higher than the top of the gutter between the houses. Two 4 inch pipes rise from the header for four feet and enter each house just above the middle of the doorway, where there is a 4-inch tee pipe, the tee being the width of the door frames. The 2-inch flows branch off at right angles to the tee, or cross piece, and drop alongside the door frame for four

feet ten inches, then along the edge of the house till they reach the sides, where they follow the slope of the gutter. At the boiler end of the houses the upper flow pipe is more than one foot below the header and the other is four inches lower. Each of the outside flows has three 1½-inch returns and the inside flows have two 1½-inch returns, all carried on the sides. Both houses are piped alike. I would like to know if it is piped properly. I am told that it is the work of an expert but I don't think I am getting the heat I ought to for the quantity of coal used, as I can hardly keep the houses above 40° in zero weather. Would I get better results if I carried the flows along the purlins, allowing a fall of about eighteen inches, and let the returns remain on the sides? Would it give me still better results if I lowered the boiler, say three feet, and carried out the above plan? I find I can raise the flow pipes in one house about eighteen inches. Would it make any difference in the temperature of the houses if I piped one with a downward flow and the other with an upward flow and would it be advisable?

F. M.

The temperature desired is not stated but for 60° in mild weather or 55° when it drops to zero the amount of radiation is ample, if, as is understood, there are two 2-inch flows and ten 1½-inch returns in each house. Raising the flow pipes as proposed would aid the circulation, but unless a closed system is used would hardly keep it above 50° in zero weather. If the boiler could also be lowered three feet as proposed, it would give even better results, provided this is enough to bring the lower end of the returns above the header on the heater. Running the pipes down hill is preferred, with the pipe to the expansion tank connected to the highest point of the flows.

L. R. TAFT.

Greenhouse Building.

Pueblo, Col.—G. Fleischer, three houses 20x65.

Alameda, Cal.—Galloway's, one carnation house.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of ten cents a line (six words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

Every paid subscriber to the AMERICAN FLORIST for the year 1902 is entitled to a five-line WANT ADV. (situations only) free, to be used at any time during the year.

SITUATION WANTED Expert grower wants position as foreman. Highest testimonials. Address J S, care American Florist.

SITUATION WANTED—By experienced single florist and gardener, commercial or private place. Address COMPETENT, Am. Florist.

SITUATION WANTED—By a grower, successful in Beauties; married, middle age; life experience; references. K H A, care American Florist.

SITUATION WANTED—By sober, industrious grower of cut flowers, bedding plants, etc. Address with offers to W. SMITH, General delivery, Troy, N. Y.

SITUATION WANTED—By a good grower of roses, carnations and general stock. German, age 38, single; capable to take full charge. Good designer. FLORIST, Strasburg, Va.

SITUATION WANTED—By experienced florist who desires to take charge of private place. Best references; age 28; married. State wages please. N N, care Lander's Hotel, Chestnut Hill, Pa.

SITUATION WANTED by retail florist with long experience: good salesman, designer and decorator; sober, industrious and reliable; references, Address JULIUS A. SCHNAPP, 2220 Indiana Ave., Chicago, Ill.

SITUATION WANTED—by good grower of cut flowers, etc. Age 34; long experience in all all branches of horticulture; to take charge or as foreman. References as to ability and character; western states preferred. Address H K, American Florist.

SITUATION WANTED—As manager or foreman. Married; 38 years of age. Roses, Beauties, a specialty; carnations, 'mums; expert florist on general stock: English and American experience. W E B, 427 E. 63rd St., N. Y., care of Mrs. Williams.

SITUATION WANTED—As foreman by thoroughly practical florist. Good decorator, designer, etc. Grower of No. 1 roses, carnations and 'mums. First-class commercial or private position. Good wages expected. Address G. FOREMAN, care P. O., Canton, O.

SITUATION WANTED-By landscape gardener, German, 28, single; good grower of cut flowers and pot plants. Understands how to do the work in a practical manner; would like to get a position in a private place. Best references from commercial places and landscape architect as an honest, sober, industrious and faithful worker. North-middle states preferred. Address LANDSCAPE, care American Florist.

SITUATION WANTED—By first-class man of good appearance and address; successful grower of palms, ferns, roses, carnations, 'mums and general bedding stock, also artistic designer and decorator; life experience in the business; perfectly capable of managing; wants a position where a good man is wanted and appreciated. Wages, $15.00 per week, or will run place which will guarantee to do that amount on shares. 50, care American Florist.

WANTED—A good all-around florist. Give references. FRANK OTTO, Winnetka, Ill.

WANTED—A gardener for general greenhouse work. Address 5329 Morgan St., Chicago.

WANTED—Young man with experience for florist store. J. M. GASSER, Cleveland, O.

WANTED—Competent florist for section foreman; married or single. Address F. BURKI, Bellevue, Pa.

WANTED—Second-hand glass, suitable for sash, 10 inches between bars. W. P. RANSON, Junction City, Kan.

WANTED—Two men for general greenhouse work and two helpers for rose sections. J. F. WILCOX, Council Bluffs, Iowa.

WANTED—A young man with some experience in greenhouse work. State wages with board. M. I. O'BRIEN, Sharon, Pa.

WANTED—Young man with some knowledge of rose growing and greenhouse work. State wages wanted with board. R, care Am. Florist.

WANTED—Good all-around greenhouse man. Must be sober and industrious, steady position for right party. Address GARFIELD PARK FLOWER CO., Chicago.

WANTED—Man of experience for greenhouse and vegetable growing: 3 houses and one acre commercial. State wages with board and room. JNO. NICHOLS, Box 354, Scottdale, Pa.

WANTED—All-around florist; also to be successful propagator. Full charge to the right man. State age and reference: $30 per month board and room. C. HUMFELD, Clay Center, Kan.

WANTED—A single man, a hustler for greenhouse work and small garden. Wages $20 per month with board and room. Address JNO. B. DINSER, 765 Grand River Av., Detroit, Mich.

WANTED—Experienced rose grower, on or before April 1. State whether married or single, and give references. Address THE ESSEX GREENHOUSES, North Olmsted P. O., Cuyahoga Co., Ohio.

WANTED—Exceptionally expert rose grower for large private establishment. Only those of highest reputation and best references from noted rose growers need apply. State wages required. W H, care American Florist.

WANTED AT ONCE—A florist and gardener; married man with small family preferred. State wages, including board and house rent. Must understand growing roses, 'mums and carnations. JNO. CORBETT, Mt. Sterling, Ky.

WANTED—Man with 2 or 3 years' experience in growing carnations and roses. Must be strictly sober and fair salesman. Steady employment; $20 first 4 months and $25 and board after that if satisfaction is given. Wanted by the 15th of April. C. F. VAN METER, Monticello, Iowa.

FOR SALE—A profitable and growing florist business for sale at a very low price, with or without real estate. A great bargain. Address for particulars. ALMA S. PATTERSON, Fort Scott, Kan.

FOR SALE—In Ravenswood, Chicago, fine plant of greenhouses, 20,000 feet of glass, good house, 6 rooms and bathroom. All in good running order. Within one block of three lines of electric cars. A bargain. Address CHAS. E. NASLUND, 1829 Lincoln Av., Chicago.

FOR SALE—An old established florist business in Baltimore city consisting of dwelling, greenhouses and cold frames fully equipped. Several large cemeteries adjacent. Entire property and business including large stock for spring trade is for sale. Death of former owner cause of sale. Address N. RUFUS GILL & SONS, 215 St. Paul street, Baltimore, Md.

Wanted at Once. Working foreman, single, must be a first class carnation grower and propagator. Also a first-class designer and maker-up, of good address and capable of waiting on customers. Also a working foreman for fern and asparagus growing establishment, single man preferred. Don't answer this unless you can furnish best of references as to industry, sobriety, honesty and competence. Good wages and steady employment for the right men. Enclose references. PETER FISHER, Ellis, Mass.

$300 Per Month.

Do you want it? If so, buy me out NOW, at your own price. Good reasons. 15,000 feet. It costs you a postal card to have particulars.

AMERICAN FLORIST

Try it now.

Every advertisement represents a genuine want. It pays to answer them.

St Louis.

Stock is coming in very slowly although it is improving in quality. Roses are much better this week and from $3 to $6 is asked for them. Beauties are the same as last week. Carnations remain at the standard with the exception of a few last week which brought $3 and a little over, but $1 to $2 is received for the majority of the stock. Violets have been slackening up considerably within the last week or so and from the present outlook the houses will be off crop before Easter. Bulbous stock can be had at from $1.50 to $3. Some very fine sweet peas are being sent in. Greens are not over-plentiful.

Robert F. Tesson has had one of the Morehead steam traps at work during the winter in connection with his heating apparatus and reports that it gives great satisfaction. "In fact," says Mr. Tesson, "we do not know that there is such a problem as returning the condensation—the trap has solved it for us."

THE SEED TRADE.

AMERICAN SEED TRADE ASSOCIATION.

J. E. NORTHRUP, Pres.; S. F. LEONARD, Vice-Pres.; S. F. WILLARD, Wethersfield, Conn., Sec'y and Treas.

Twentieth annual convention, Twin Cities, Minn., June, 1902.

MANY of the Holland bulb men visited Chicago during the week.

W. C. BECKERT and wife, of Allegheny, Pa., left last week for a trip to Japan.

FRENCH bulb prices are reported to have stiffened slightly within the past two weeks.

VISITED BOSTON: Alburtus N. Clarke and E. Clarke, Milford, Conn.; John Degnan, Chicago.

ROBERT MCNIFF, formerly with Peter Henderson & Co., New York, is now with Vaughan's Seed Store, Chicago.

VISITED CHICAGO: Charles Loechner, of Suzuki & Iida; Joseph Rolker, New York, Henry A. Salzer, La Crosse, Wis.

J. E. KILLEN is now on the road in the interest of Caughey & Carran, of Detroit, who make a specialty of clover and sugar beet seed.

J. E. HILLEBRAND, corresponding secretary of the Bennebrock-Vogelensang division of the Algemeene Vereeniging voor Bloembollen Cultuur, Haarlem, Holland, was among our visitors this week.

DUTCH bulb prices for the season rule somewhat higher on named tulips, especially scarlet, about the same on mixed tulips, and from twenty to twenty-five per cent lower on most hyacinths and some narcissi.

The following item from a Bermuda letter of March 8, is interesting at this time: "The lilies are looking very good this season—they have not so well for seven years though the crop now is not one-fourth as large as it then was."

SECRETARY WILSON, of the Department of Agriculture, has approved the new scheme of government seed and plant distribution, devised by B. T. Galloway, chief of the bureau of plant industry. Further details of the plan will appear next week.

TUBEROSE bulbs, first-class Dwarf Pearl, are even scarcer than was anticipated. Growers of these bulbs are holding off on contracts for the coming season's crop and asking higher prices. They claim that offsets for planting stock are scarce, owing to the very short crop from which the offsets are taken.

The State of Trade.

In response to an inquiry regarding mail and counter trade thus far this season as compared with the same period last year, we have received the following replies from some of the leading merchants:

Plant Seed Co., St. Louis: "Business is satisfactory."

T. W. Wood & Sons, Richmond, Va.: "Counter trade considerably behind last year, owing to unfavorable weather. Mail trade about equals last year."

Vaughan's Seed Store, Chicago: "Both our mail and counter trade for the last six weeks shows a good increase over 1901. The present warm weather is advancing the season very much."

R. & J. Farquhar & Company, Boston: "Our mail and counter trade fully up to last year, notwithstanding a somewhat later season and also the fact that our catalogues were published later than usual."

James Vick's Sons, Rochester, N. Y.: "So far this season's business is very satisfactory. The orders are coming in very well and averaging larger than last season. We also anticipate a large increase in our local trade."

John Lewis Childs, Floral Park, N. Y.: "I would say that our catalogue trade this season so far has not been quite up to last year, but considering the severity of the weather during February, I am only surprised that business has held up as well as it has."

W. Atlee Burpee & Company, Philadelphia: "Our mail order trade this season is considerably ahead of last year. There is no doubt in our mind that this will be the best year the seed trade has had for a number of years. The only question is one of supply, not demand."

John A. Salzer Seed Company, La Crosse, Wis.: "Such trade as we are having makes a fellow sick; it must be the weather." In the west the mild bright weather has stimulated trade a good deal; worked half to death is the condition of the seed clerks. Hence, no doubt, Mr. Salzer's comments.

Johnson & Stokes, Philadelphia: "We would say that we are having the most satisfactory mail order trade that we have had for a number of years. There is a much larger proportion of orders for the higher priced novelties than has been the case for many seasons, indicating a healthy condition among the farmers and gardeners over the country at large. It is too early in the year as yet for us to make any estimate of what the counter trade is going to be, but we anticipate that it will show about the same increase as the mail order department has."

J. M. McCullough's Sons, Cincinnati. "Considering the long period of unfavorable and stormy weather we have had since the first of January, business is better than we should have expected. Every indication, both in the wholesale and retail trade so far as we can sum it up, points to the fact that those buyers who did not anticipate their wants early in the season are being influenced more by the weather and the elements in holding off until the last minute than usual, and this has been proven very conclusively in the last day or two by the number of rush orders that are coming in. The outlook, in our judgment is very favorable."

LILIUM HARRISII.

As reliable stock as is produced on the Island, raised, crop-rogued, inspected, and packed by a grower always on the ground.

We offer this (V) brand of Harrisii as averaging the most reliable stock exported. Orders placed now can be supplied, late ones could not be filled last year and may not be this. Write for prices on 5 to 7, 7 to 9, and 9 to 11.

White Roman Hyacinths.

12 ctms. and upward, being the whole crop above the 12 ctm. size, no 13 to 15 ctms. being taken out.

150,000 of this grade imported by us the past season proved very satisfactory and we offer 1902 crop of same, confident that this grade contains the best value possible for the price, which is made for early orders. Remember the size contains all the bulbs in the crop above 12 ctms. and up to 16 ctms. Write for prices.

N. B.—Our usual percentage of extra early deliveries will be made.

Vaughan's Seed Store, CHICAGO. New York.

Store open from 7 a m. to 9 p m daily. Sunday and holidays closed at noon

O YOU EVER put two and two together? The results are often interesting. Just after Christmas there was great "to do" about pickeled stock. You remember it; the trade papers were full of it. Read the reports from a man who divided his order:

From Am. Florist, Jan 7, 1902.

Ed. Am. Florist:—It is absolutely necessary to hold back some of the cut before each holiday to meet increased demands. But at the same time I have been caught every year. This year I had a shipment from one of the leading growers, C. O.D. $260, on which I did not realize $200 because half the stock was too old. But what is the use of kicking.

St. Paul, Minn. A. S Swanson.

From a Business Letter, Jan. 12, 1902.

E. C. Amling, Dear Sir:—Please accept inclosed check for $500 on account. At the same time allow me to compliment you on the way you filled our Christmas order. I must say the goods were all "O. K.," first-class. Am only kicking myself for not having had more of my stuff come from you. We were well pleased. My wife said every flower was perfect.

St. Paul, Minn. A. S. Swanson.

Were YOU satisfied with your Christmas supplies? Come to us for Easter and you'll get what you want, as you want it and when you want it. Our facilities are perfect and our crops are on. Let us have your order now.

E. C. Amling

The Largest, Best Equipped and Most Centrally Located Wholesale Cut Flower House in Chicago.

32-34-36 Randolph St. L. D. TELEPHONES Central 1999 and 1977. **CHICAGO.**

THE NURSERY TRADE.

AM. ASSOCIATION OF NURSERYMEN.

R. C. BERCKMANS, Pres.; R. J. COE, Vice-Pres.
GEORGE C. SEAGER, Rochester, N. Y., Sec'y.
Twenty-seventh annual convention, Milwaukee, Wis., June, 1902.

WM. A. PETERSON, of Chicago, is on a trip to the Twin Cities and Duluth.

THE nurseries of Huntsville, Ala., have completed their shipments to selling headquarters at St. Louis. The Huntsville Wholesale Nurseries and the Alabama Nurseries shipped more than twenty cars each.

J. L. BUDD says that the Soulard and Gros Pomier apples are distinct in tree, fruit and season. The former was brought from near St. Louis to Galena, Ill., by the late James G. Soulard and by him distributed about 1876.

Wharf Examination at New York.

Frederick W. Kelsey's efforts to impress upon the New York customs authorities the lack of necessity for, and delays resulting from, carting incoming nursery stock to Public Stores for examination, have at last borne fruit. In his last letter Mr. Kelsey showed the collector that the method resulted in a delay in no case of less than three days, and generally nine or ten, with consequent material loss to importers and loss to the port of New York, importers preferring to make entry at other ports. In reply Collector R. G. Bidwell says:

Referring to your communication of the 29th ultimo relative to a return to the former method of wharf examination of nursery stock, it gives me pleasure to state that the Appraiser concurs in the suggestion and in future wharf examination only will be made.

Fighting the Elm-Leaf Beetle.

Referring to the elm-leaf beetle and its threatened ravages during the coming season, J. A. Pettigrew says: "The gravity of the situation behooves everyone interested in city trees to be on the alert and prepared to meet this pest in the coming spring, by spraying each elm tree in the infested districts as soon as the leaves appear, or at latest as soon as eggs are found; these are yellow in color, and are laid in clusters on the under side of the leaves. Usually one application is sufficient if done before the eggs hatch out. Newly-hatched larvæ are easily killed by giving them poisoned foliage to feed upon. Should spraying have been neglected or improperly done the larvæ may be destroyed as they descend the trees to pupate, by spraying them with a preparation of kerosene and water, in the proportion of one of the former to five of the latter, first emulsifying the kerosene in whale-oil soap. Spraying machines can be obtained ranging in price from $5 or $6 for a bucket pump to $20 for one on a fifty-gallon barrel, mounted on wheels. Arsenical preparations can also be purchased ready for use."

Colorado Springs, Col.

TRADE HOLDS UP WELL THROUGH LENT.—PREPARATIONS FOR EASTER.—DOINGS OF THE GROWERS AND OTHERS.

Trade conditions in this city are very good at this time, with a good supply of roses, carnations and violets. Potted stock is being put into the show houses and the lilies that are too previous help greatly to make an attractive display. Wm. Clark, who visited Indianapolis, brought back a collection of blooms of the new carnations and put them on exhibition. They attracted a great deal of attention.

A new house 30x400 will be built next month by Wm. Clark, on his north end property, which is now devoted to growing shrubs and perennials, where he will put in a heavy stock of the new varieties of carnations selected while east last month.

Bedding stock of all kinds is looking fine and from the present indications the amount grown this year will exceed by far the output of any previous year.

W. H. Evans has built five new houses adjoining the Crump place and is growing carnations and vegetables.

We have no bowling records to send in as "Ed" Johnston and "Billy" Dunman are the whole club here. J.

Buffalo.

CLUB HOLDS ITS ANNUAL BANQUET AND ELECTION.—THE STATE OF TRADE.—GROWER CHANGES VIEW POINT.—NOTES.

On March 6 the election and banquet of the Buffalo Florists' Club was held at the Raleigh Hotel. While the attendance was not as large as it should have been, it was a very successful gathering. The toasts were good and the menu was all right. The new officers are: President, Jas. Braik; vice-president, F. G. Lewis; secretary, Wm. Legg; treasurer, Chas. Keitsch; financial secretary, E. C. Bruecker; trustees, Wm. Scott, J. F. Cowell and W. F. Kasting.

Trade has been as usual, with fair weather and ordinary supply. Good windows are to be seen all along Main street. Store openings are on for this week and next and call for the use of many palms and spring stock.

The park department in the estimates for next year has asked for a sufficient sum to give Assistant Superintendent Braik, of Delaware Park, and Superintendent Cowell, of South Park, a chance to do what is really needed.

C. H. Keitsch has started a store on Main street and is doing nicely, but he admits that things look somewhat differently to him now that he views them from the standpoint of the seller, not the grower.

J. H. Rebstock is recovering from the injury received recently in a runaway on Delaware avenue. W. A.

Cleveland.

CLUB HOLDS A VERY INTERESTING SESSION.—GOOD CARNATIONS BRING UP DISCUSSION AS TO AWARDING CERTIFICATES.—STREET FAKIR JUDGED INDISPENSABLE.—NOTES.

The regular meeting of the Florists' Club was held last Monday evening and for attendance and subjects discussed was the best one we have had for some time, about twenty-five members being present. A vase of magnificent blooms of Mrs. Potter Palmer was exhibited by the Chicago Carnation Company. It was admired by all and the members were unanimous in voting it honorable mention. There was quite a discussion on awarding certificates of merit to meritorious seedlings, but the majority were adverse to awarding certificates to carnations judged by artificial light, as it is impossible to determine their true color by that means. The matter of the exclusion of the street fakir was put forward by Mr. Brinker, and discussed pro and con. The consensus of opinion seemed to favor the retention of this type of merchant in large cities and his expulsion in smaller towns. In cities like Chicago and New York the street fakir is indispensable. A. Graham gave quite a lengthy discourse on the novelties in the carnation line seen during his trip west. The boys gave B. Hart a hearty welcome after being absent from the club twelve weeks with typhoid fever, also James Wilson, whom we are glad to see has resumed the weekly attendance.

Wm. Smith is sending in some fine Brides and Bridesmaids. The discovery of alkali and gas last summer in the water used in his houses solved the problem of the partial failures of the past, and his plants are the picture of health.

Business the past week has been very good, prices remaining about the same. Out of town shipping is very brisk, the wholesale houses being cleaned up every day. Hydrangeas are going to be very scarce for Easter. ECHO.

A Dollar Each.

ED. AM. FLORIST:—Enclosed find cash for another year, for the FLORIST is "dirt cheap" at the price. I would not miss some of the special numbers for a dollar each. A. D. BROWN.

Adams, Mass.

TESTIMONIAL.

WHEREAS, we believing ourselves to represent the majority of Florists in the Providence Community, do hereby declare the general sentiment of the flower trade to be, viz:

1st That the Products of Wholesale Growers of Flowers be sold to legitimate flower stores, the owners of which stores by the result of exertion depend upon the sale of such flowers for their livelihood.

2nd That the selling of Flowers at Wholesale Prices to stores that do not handle flowers legitimately is a short sighted policy of the individual grower, and bound to react upon him in a general way in time.

3rd That we declare such stores that handle other goods and depend upon other goods than flowers to earn them a profit and livelihood, to be illegitimate flower stores and not recommendable to the Wholesale Grower of Flowers

4th. We hereby set our disapproval upon the method of any Grower or Dealer which lowers the standard and efficiency of our business, and we express our willingness to withdraw our entire support from such Grower or Dealer in the local market whose method tends in that direction.

We attest our sincerity by our names.

Aurora, Ill.

TRADE GOOD RIGHT THROUGH LENT.—POOR RESULTS WITH LILIES FOR EASTER.—DOINGS AT BATAVIA.—RAILROAD TO ENLARGE RANGE.—VARIOUS NOTES.

Business this winter has been good with all. The Lenten season was hardly felt and stock has moved very nicely with the exception of bulbous flowers, of which less have been sold than in former years. The prospect for a good Easter is bright and all stock is in excellent shape, with the exception of lilies. Of these such a large percentage were thrown out that, while in former years we shipped lilies to the Chicago market, this year we will hardly have enough. Smely, who never before lost over twelve per cent of his bulbs, had to throw out about seventy-five per cent of Harrisii and fifteen per cent of longiflorum. Bulbs received first proved the worst. One lot of Harrisii did not start to grow at all, although the bulbs even now appear sound. Our Batavia neighbors are better off. Williams & Sons Company, McAllister and the Bellevue Place Company each will have fine lots, mostly Harrisii. At the latter place they are cutting some splendid roses as well. A house of Bridesmaids and Brides several years old is worth looking at.

The Burlington railroad, which has quite an extensive greenhouse plant in Aurora, will in all probability greatly enlarge it. At present most of the glass is devoted to Meteor roses. A couple of houses of carnations and large numbers of bedding plants are also grown. Next season roses will be dropped altogether and carnations will be grown. Several kinds will be grown, but Anthony Warimont, who has charge, believes in Lawson, which will occupy as much or more space than all others.

W. R. Reese, who was in business with his father, R. Reese, and for the last two years Superintendent of Water Works of Aurora, is after the nomination for county clerk and has many friends.

J. M.

IRVINGTON, MD.—The greenhouses and business of Robert Schmidt were sold at auction for the trustee on March 1.

MECHANICSBURG, PA.—The greenhouses of J. M. Longsdorf have been sold to Mr. Gronbeck, who has had charge of them and who will remove them to another location. Mr. Longsdorf contemplates rebuilding on the same site.

The Most Important Thing

To consider in buying Cut **Easter Lilies** is quality, not the price. Poor Easter Lilies are dear at any price. As in former years we will again have A No 1 Easter Lilies. It is still too early to set a price on Lilies, but you may be sure that we will bill them at the right price, as we do with everything.

Of course you understand that we have everything in the flower line, such as Roses, American Beauties, Carnations, Valley, Violets (our violets are the finest grown), Smilax, Daffodils, Tulips, Sweet Peas, Romans, Paper Whites, Asparagus, etc., etc.

FAVOR US WITH YOUR EASTER ORDER.

HOLTON & HUNKEL CO., Milwaukee, Wis.

CRESSBROOK. The coming Pink Carnation for everybody to grow.

Baltimore, Feb. 21, 1901, it scored 94 Points, the highest of any seedling. Cressbrook has never shown disease of any kind and is an extra free bloomer. Size of flowers under ordinary culture, 3 to 3½ inches.

Orders will be delivered in rotation on and after Jan. 1, 1902, at the following prices:

12 plants	$ 1.50	250 plants	$25.00
25 plants	3.00	500 plants	37.50
50 plants	5.00	1000 plants	75.00
100 plants	10.00		

C. WARBURTON, FALL RIVER, MASS.

Cressbrook may be seen growing at

THE E. G. HILL CO'S., Richmond, Ind., and at WM. NICHOLSON'S, Framingham, Mass.

Carnation Floriana

We believe this to be the best pink carnation introduced to date, was disseminated in the spring of 1901 by originators, Messrs. Fillow & Banks. Price, $6.00 per 100; $50.00 per 1000. 50 at 100 rate, 500 at 1000 rate. Less than 50, 8c each.

DORNER PLACE SHOWS MANY FINE SEEDLINGS.—HUNDREDS IN THEIR SECOND AND THIRD YEAR'S TRIAL.—GOOD VARIETIES FOR LOCAL USE NOT TO BE DISSEMINATED BECAUSE FLOWERS TOO SMALL.

It was C. W. Ward, who, in his happy speech at the Baltimore banquet a year ago, likened Fred. Dorner, Sr., to Socrates of old. The comparison was apt and in no wise exaggerated. Fred. Dorner unquestionably possesses the attributes of the true philosopher and, like all great men in their chosen work, modesty coupled with honesty of purpose and firmness of conviction are not the least attractive attributes which charm the stranger upon first meeting this prince of carnation growers.

It is not my purpose, however, to dwell upon Mr. Dorner's personal qualities. What I beheld during a recent visit to his place proved, so to speak, an "eye opener." Seedlings, seedlings and seedlings, one of the largest houses being entirely devoted to their care. There are seedlings of the first, second and third year's trial. To be more exact, there are 289 of the second year and over 350 of the 1901 hybridization. Among these I noticed several white ones, which bid fair to outdo all the existing varieties, veritable giants and marvels of productiveness. Pinks seem to head the list and no sooner would I become charmed with one than a second, a third and a fourth of the same class would claim my attention. Then there are scarlets, some the acme of perfection as "fancies" and others, it seemed to me, the very thing for the average grower, where quantity is of the first consideration.

In crimsons there are several which look most promising indeed and yellow and striped varieties are equally attractive. Mr. Dorner, I may add, has devised a system whereby he can trace the pedigree and record of every seedling on his place. He takes no chances. A seedling advanced to the third year's test, like the school boy promoted to the higher grade, must prove itself meritorious, else out it goes. In this respect he is very strict, nor is he inclined to parade his favorites and dwell upon their good qualities only. On the contrary, if there is a fault about any, he himself will be the first to point it out.

There are, for example, a number of seedlings on his place which some growers, I am sure, would consider the best that "ever happened," and well worthy of dissemination. In Mr. Dorner's opinion, however, the best that should happen is to put them on the retired list at once and thus spare a good deal of disappointment to the growers.

The four varieties introduced this season are unquestionably meritorious. Two medium sized seedlings, No. 130, crimson, and No. 58, a beautiful pink, both of 1898 hybridization, attracted my attention. What they lack in size they certainly make up in quantity of bloom and vigor of growth. Because of their lack of size they will not be disseminated, but for local use both prove themselves worthy of all the space given them. A stroll through the rose, palm, smilax and asparagus houses was not the least interesting feature of my visit. Everything about the establishment is in the pink of condition. NOMIS.

Roses Brides, Maids and Golden Gates. 2½ inch stock in fine condition. $2.25 per 100; $18 per 1000. Ready for delivery.

HEADQUARTERS for EASTER PLANTS
BLOOMING EASTER WEEK

I have the largest stock in Philadelphia; 7 large houses and some hot beds, are crowded with them. Secure your supply by ordering now.

AZALEA INDICA

As I am agent for a large concern in Belgium and being a large importer of these choice Easter plants, I can sell you these direct at first hand and not through a middleman. Mme. Van der Cruyssen is a rare article this Easter. I was fortunate enough to get all this variety in Belgium I wanted and can offer you plants at the following prices: 5-in. pots, 40c to 50c; 6-in. pots, very bushy and large, fine shape, $1.00; specimens 7 and 8-in. pots, $1.25 and $1.50 each; extra choice specimens, very large, can't be beat, 9 and 10-in. pots, $3.50, $4.00, $5.00 each. Other varieties of Azaleas, such as Bernard Andre Alba, (white), also other white, Princess of India, Prof. Wolters, and other varieties of my own selection, 6-in. pots, 50c, 60c, 75c, $1.00 each; larger plants from $1.25 to $1.50 each. Also 5-in. pots, 40c each.

Cineraria—I have an immense quantity, best colors, 5½ and 6-in. pots, $3.00 to $4.00 per doz.

Spiræa Compacta and Floribunda, perfect jewels, 5½ and 6-in. pots, $3.00 to $4.00 per doz

Hydrangea Otaksa, 6-in. pots, $3.00 to $4.00 per doz.; 7-in. pots, 60c, 75c and $1.00 each.

Begonia, Pres. Carnot, Metallica and other good varieties, 5½ and 6-in. pots, $3.00 to $4.00 per doz.

Begonia Vernon, very fine, red, large, 4-in. pots, $1.50 per doz. Other good mixed varieties, 4-in. pots, $1.20 per doz.

Daisies, (white), Marguerite, 5½ and 6 in. pots, very bushy, $3.00 to $4.00 per doz.

Yellow Daisies, 5½ and 6-in. pots, $3 to $4 per doz.

Lilium Harrisii, raised from Henry F. Michell's selected 7-9 bulbs, ($100 per 1000) fine plants, 6-in. pots, from 5 to 10 buds to a plant at the rate of 10c per bud. No Lilies sold by themselves—other plants must accompany the order.

Dracæna Bruanti, 6-in. pots, 25 inches high, very fine, 60c.

Dracæna Indivisa, (imported), very large for decoration, 7-in. pots, 75c to $1.00 each.

Hyacinths, my own importation, raised from the finest named bulbs all colors, 4-in. pots, $10 a 100.

Tournesol Tulips, (double red and yellow striped), 3 in a pot, $1.50 per doz. pots. Belle Alliance, (single), scarlet striped, 3 in a pot, $1.75 a doz pots

Daffodils, (Von Sion). 3 in a 5-in. pot, $1.50 to $1.75 per doz. pots.

Azalea Mollis, 6-in. pots, 50c each.

Cash with order please. Money can be sent safely by postoffice or express money order or bank draft. All goods shipped at purchaser's risk.

FOUR NEW CARNATIONS FOR 1902

Sales Limited to 25,000 of each Variety. Orders Filled in Rotation as Received and Booked.

ALBA—A white, never showing any trace of color, largest size and perfect form.

STELLA White penciled pink. Comes into flower early and shows a mass of buds and bloom throughout the entire season. This is undoubtedly the most satisfactory of all the variegated carnations where large flowers in quantity are wanted at all times.

DOROTHY WHITNEY—The best commercial yellow we have ever grown. It gives quantity, of the best form and strong stems all through the season.

APOLLO—The brightest scarlet in the commercial class. It is much brighter than Crane, of equal size bloom and better stems. Early and very free.

Prices: $12.00 per 100; $27.50 per 250; $55.00 per 500; $100 per 1,000. 250 of Each of Above Four Varieties for $100.

The Cottage Garden Novelties.

J. H. Manley—a large early and free scarlet.
Viola Allen—white edged and splashed rose pink.
Harry Fenn—new Harvard crimson.
Violania—sport of Bradt with less markings.
Price—$12.00 per 100; $27.50 per 250; $55.00 per 500; $100 per 1,000.

Other 1902 Novelties.

Gaiety—(Hill), white striped scarlet. $10.00 per 100; $75.00 per 1,000.
Cressbrook—(Warburton), pink. $10.00 per 100; $75.00 per 1,000.
Mrs. E. A. Nelson (Nelson), pink. $10.00 per 100; $80.00 per 1,000.

We can supply good stock of the 1901 introductions—Lorna, Roosevelt, Norway, Golden Beauty, Novelty, Dorothy, Prosperity, Mermaid, Irene and Egypt. Also the good standard varieties—Morning Glory, Lawson, Marquis, Crane, White Cloud, Bradt, Glacier, Maceo, Joost and others.

WE SHIP ONLY THE BEST STOCK. IF YOU HAVE NOT ALREADY RECEIVED OUR PRICE LIST, SEND FOR IT AT ONCE.

3503 N. Senate Ave., INDIANAPOLIS, IND

Lowell, Mass.

GOOD WEATHER MAKES BUSINESS GOOD.—PLENTY OF STOCK IN NEARLY ALL LINES.—LOCAL GROWERS SHOW AT BOSTON.

The weather continues to hold fine, and we hope it will continue until after Easter. About the only shortage that was noticed last week was red roses. Perhaps it was due to the fact that the Prince was being entertained in Boston. Business is in a fairly good way; at times it is rather brisk. One good thing, however, is that there is plenty of good stock available at a moments notice. At the present time violets are to be had at any old price, but then this will soon change, as Easter is nearing.

Tewksbury was well represented at the carnation show held in the Boston Flower Market Saturday, March 8. M. A. Patten took many first prizes. Louis Small showed some Marquis that were of fine quality and A. C. Roper had a fine vase of his seedling carnation, Fairmaid.

J. J. McManamon was elected town treasurer for the town of Dracut on March 3, his opponent having held the office for over twenty-six years.

Patten has a good way of telling customers when Easter comes. Every box or package sent out contains a little card neatly printed. A. M.

Marietta, O.

GROWER HAS EXTRA QUALITY SWEET PEAS.—HIGH WATER MAKES TROUBLE.—OTHER NOTES.

J. W. Smith has his window decorated with spiræa, lilac and hyacinths. His houses at Williamstown, W. Va., which are in charge of his brother, Dr. Charles H. Smith, are in fine shape and he is cutting some choice carnations and fine sweet peas of bright color, the latter with twelve-inch stems.

High water struck town on March 3 and a heavy storm left ten inches of snow behind, but it quickly melted under the influence of bright sun and added to the flood.

Stock is plentiful, such as violets, sweet peas, carnations and bulbous flowers, and are in fine condition, but good roses are scarce.

Mrs. Norval Kiger has a splendid lot of Easter lilies, averaging thirty inches in height. L.

THE SENSATIONAL NEW ROSE FOR 1902

MRS. OLIVER AMES

This grand rose is a sport from Mrs. Pierpont Morgan and possesses the same vigorous habit, fine glossy foliage of deep green, erect, stout stem and even more free flowering qualities. The flowers are very full and large, averaging 4 inches in diameter when in perfection. The color is a lovely soft blush with a little deeper shading in the center and on the edges of the petals, and a delicate tint of yellow at the base of the petals, making it the most beautiful of all the delicate colored roses ever offered; its keeping qualities are unsurpassed. In short it is the ideal rose in size, color, form, stem, foliage and free flowering qualities.

It has taken five large Silver Medals, namely:—At the New York Show, Oct. 30th, 1901; Newport, Rhode Island, Show, Nov. 5, 1901; Orange, New Jersey, Show, Nov. 12, 1901; Philadelphia, Pa., Show, Nov. 13, 1901; New York Florists' Club, Dec. 9th, 1901; and a Gold Medal at the Kansas City Show, Nov. 18th, 1901. Also Certificates of Merit at Tarrytown, New York; Poughkeepsie, New York; Chicago, Illinois; American Institute, New York; Chestnut Hill, Pennsylvania, and Madison, New Jersey.

What the leading retail florists of the different cities say of this rose:

MR. PHILIP BREITMEYER, of Detroit, Michigan, saw it growing here on October 30th, and was so pleased with it that he declared empathically it was the most beautiful of all light-colored roses he had ever seen, and that it would supplant all such varieties as Golden Gate, Mme. Watteville, etc.

MR. H. H. BATTLES, of 108 South 12th St., Philadelphia, Pa., writes under date of Nov. 23, 1901:

Dear Mr. May:—The Mrs. Oliver Ames is beautiful. We have given it the place of honor in our shop and shall take much pleasure in showing it to others. I was unfortunate in not seeing it at our late show, but heard it spoken of in very complimentary terms. Yours very truly, H. H. BATTLES.

MR. W. J. PALMER, of Buffalo, writes under date of Nov. 28th:

Dear Sir:—The beautiful Mrs. Oliver Ames roses received in perfect condition and are very much admired by my customers; just as I have heard you say, the public want something besides Bride, Bridesmaid, Meteor or even Beauty. Each of my customers who saw it remarked something good about it. Accept my thanks for the beautiful roses.

Yours truly, W. J. PALMER.

J. H. SMALL & SONS, Washington, D. C., under date of Dec. 2nd, 1901, write:

Dear Mr. May:—We beg to acknowledge the receipt of the box of Mrs. Oliver Ames roses which arrived on Wednesday, November 27th. They were in perfect condition when we received them and we have kept two or three of them until to-day, which proves that their quality as a keeper is unsurpassed by anything we have handled. We exhibited the roses to our customers and they were very much admired. We have no doubt from what we have seen of this rose that it has a great future in store. Again thanking you for your courtesy in sending them, we remain, Yours very truly, J. H. SMALL, JR.

HALLIDAY BROS., Baltimore, Md., write under date of Dec. 5th:

My Dear Mr. May:—Mrs. Oliver Ames arrived in perfect condition and have attracted a great deal of attention in our window to-day. I am sure it will fill a long needed want in the rose line, being so distinct in color from all others.

Yours very truly, ROBERT HALLIDAY.

J. H. SMALL & SONS., New York City, under date of Dec. 6th, write:

Dear Sir:—Regarding the rose, Mrs. Oliver Ames, of which we have had cut blooms from you, we desire to say that we think very highly of it. The shade of color is most delightful, nothing better could be desired in stem or foliage and as to its keeping qualities we can hardly say enough. Those we had from you December 1st are still good.

Yours very truly, J. H. SMALL & SONS.

ALEX. McCONNELL, New York, under date of Dec. 16th writes:

Dear Sir:—I consider your new rose, Mrs. Oliver Ames, a very valuable acquisition to our collection of roses; the delicate pink tint of the bloom and fine foliage, gives the new introduction a decided distinctive character. A strong grower with excellent keeping qualities, so desirable to the retail florist. Yours very truly, ALEXANDER McCONNELL.

WM. E. DOYLE, Boston, Mass., writes under date of Dec. 27th, 1901:

Dear Sir:—Regarding the Mrs. Oliver Ames you sent me, I will say that I think very favorably of them; desirable in color, buds of good size and lasting qualities excellent; they arrived in perfect condition; I gave them I think an excellent test. I have no doubt that it will sell well.

Yours very truly, WM. E. DOYLE.

Order at once if you wish to secure the early prepared stock.

JOHN N. MAY, SUMMIT, NEW JERSEY

Wilmington, Del.

PROSPECTS FOR A BUSY SEASON.—CHANGES AND DOINGS AMONG THE GROWERS.—VARIOUS NOTES.

Easter is close at hand and we are all hustling to get our lilies in, and, weather permitting, expect to have a good week of trade. There are a few changes to be made this year. Our old friend, Robert Lockerbie, is to take Mr. Edward's place at Claymont, the latter retiring. W. H. Vance will remove his entire plant nearer the city, having close shipping connections. Florist McKeown has gone west, and Carson Boyd has bought Chas. Sparks' place of business. Simons Brothers will erect more glass this year.

Carnations have done well this winter, especially Joost, Crane and Lippincott. We also think well of Morning Glory and Dorothy, for pink; Estelle and Mack Richmond for red, Lorna and Queen Louise for white. Some think that Norway is all right, but it has two faults, partly pink and a certain quantity of deformed flowers. We still grow the old standbys, Hill and McGowan.

Wm. Potter has a promising pair of seedlings, a white and a pink. He is going to build a new greenhouse. Mr. Baylis has a variegated sport of Hill, and a white sport of Bradt. W. H. V.

Washington, D. C.

Trade has been quite active the past week. With most of the retail florists it does not look like mid-Lent, with a number of dinners, teas and receptions. The Westinghouse dinner and reception given in honor of Earl Gray was the most elaborate event of the week, pink roses and lily of the valley being used exclusively in the decorations by J. H. Small & Sons. P. G.

ALEDO, ILL. — Charles McChesney, formerly of Burlington, Ia., has bought real estate for a greenhouse establishment, beginning work shortly upon a residence and two greenhouses 14x60.

WANTED.

OFFERED AS THE

AMERICAN ROSE CO. PRIZES

AT

MADISON SQUARE GARDEN

OCTOBER 30 TO NOVEMBER 6, 1902

For the Best 50 Blooms of Ivory

THE NEW YORK FLORISTS' CLUB HAVE ACCEPTED OUR OFFER TO BE COMPETED FOR AT THEIR GREAT FLOWER SHOW, AS FOLLOWS:

For fifty cut blooms of our **Ivory,** the true **White Sport** of **Golden Gate:** First Prize, One Hundred Dollars; Second Prize, Fifty Dollars; Third Prize, Twenty-Five Dollars. The roses must be exhibited by the **grower** thereof, and must be cut from plants purchased by said grower from us. No exhibitor to receive more than one prize.

WE HAVE MADE A SIMILAR OFFER TO HORTICULTURAL SOCIETY OF CHICAGO

You must grow strong stock to secure these prizes, and we are ready to sell it to you at once. Our young plants from soil that were pricked off from the cutting bench early in January are in fine order for shipment, and will cost you much less for expressage than pot-grown plants, and may prove superior to even grafted stock.

Remember you are bound to make money growing **Ivory,** because it is a **White Sport** of **Golden Gate** and Golden Gate is a very profitable rose for forcing.

Notice these low prices for a new rose that originated with us, and is now sold as plants for the first time:

ROOTED CUTTINGS FROM SAND = $50.00 per 1,000

ROOTED CUTTINGS FROM SOIL = $80.00 per 1,000

NOW MAKING NICE TOP GROWTH.

Quality guaranteed because the stock has been propagated from 40,000 blooming plants.

IMMEDIATE DELIVERY.

SAMPLE PLANT MAILED ON RECEIPT OF TEN CENTS

We will have the Miss Alice Roosevelt for next year's introduction

Dallas, Tex.

TRADE BETTER THAN USUAL AT THE SEASON.—SPRING WORK ON IN EARNEST.—NEED OF RAIN.

Trade is reported as above the average for this season of the year and "the boys" all seem to be on the happy side of life. Lang has had a good share of the decorations of late, and says he has no "kick" coming. Mrs. Holtkamp and daughter are still doing their share of business; some elegant funeral work was furnished for out of town customers by these ladies the past week that was hard to excel. They have a well earned reputation in this line of work.

The Haskell Avenue Floral Company is head over heels in work now. The shipping season is on in good earnest. They will have a good line of Easter stock, but they do not have half enough carnations for the demand although the cut is large, but with the new range they will have a much larger output another season.

It is very dry in the northern part of the state and especially at Dallas we need rain. The ground is all ready for planting roses and carnations, but it is too dry. We could use some of that surplus the Pennsylvania boys are having just now. LONE STAR.

Minneapolis.

SCARCITY OF FANCY STOCK.—LITTLE CHANGE IN MARKET CONDITIONS.—VARIOUS NOTES.

There was no decided change in business last week, excepting that Easter's near approach gives the retailers as well as the growers something to keep them busy and from the outlook there will be a nice lot of azaleas, Harrisii, cyclamens, spiræas and so forth to decorate the show windows and to take the eye of the careful purchaser. There was a rather brisk demand for Meteors and Beauties last week, but fancy stock seemed a scarcity. Bridesmaids and Brides were in quantities enough, but the quality was not fancy, and plenty of second grade stock is to be had at any price. Carnations are in abundant supply but good prices are realized and they move rapidly. Tulips and daffodils are in full swing. Romans and narcissi are scarce and in good demand.

There are not many complaints of lilies being backward or diseased this year, although a few cases are reported.

C. F. R.

SPLENDID STOCK FOR EARLY PLANTING.....

Peter Reinberg, 51 WABASH AVE. Chicago, Ill.

Rochester, N. Y.

WELL KNOWN FIRM OF DECORATORS PUTS UP A GARDEN IN A BALL ROOM —FRUIT TREES IN BLOOM.—TRADE HOLDING UP WELL.—GOOD PLANTS FOR EASTER.

A most unique affair was a midwinter lawn party, held in the spacious hall of the Eureka Club a few days ago. Moss-green carpets covered the floor, the trunk of a large tree was placed in the center of the hall and long, stout branches, thickly covered with cherry-blossom, were fastened to the trunk. The tree had a spread of thirty feet one way and thirty-five feet the other when finished. Along the walls, smaller trees or branches of cherries, apples, Japan quince, spiræas, philadelphus, forsythia and so forth were placed. The green was southern smilax fastened to the branches. Quite a number of rose bushes in flower were also used here and there along the sides and in the corners of the hall were clumps of evergreens. Tulips, hyacinths and daffodils were freely used. Interspersed among the branches of the large tree, as well as in the side shrubberies were hundreds of chinese lanterns, into which incandescent lights had been dropped. Dancing under a full sized blooming cherry tree to the orchestra, hidden on the stage behind the flowering shrubs in February, was a rare treat to all participants. The dining hall was lavishly trimmed and decorated with tulips, hyacinths, daffodils and so forth. J. B. Kellar Sons furnished the decoration, as they did a former one, in which they transformed the same premises into a barnyard, with cow, horse, donkey, chickens and geese visible in enclosures, and with all sorts of farm utensils introduced among the other decorations.

Up to date Lent has not materially affected the flower and plant trade here. Prices for cut flowers are only a trifle lower than they were a month ago, although stock is quite plentiful. Flowering plants from the modest primrose, hyacinth and cineraria up to Lilium longiflorum, azaleas and rhododendrons in all sizes move freely at very fair prices. There are still some excellent, well-flowered cyclamens in 6-inch to 8-inch pots to be seen around and I am told that even at Easter some of these large plants, which are single bulbs, one year old, will be in the market. An occasional wedding, an anniversary, a family gathering or some sort of a party or celebration always calls for flowers and a more or less elaborate decoration to give the florist something to do. J. B. K.

DANVILLE, ILL.—Wm. J. Anker is building a flower store 18x20, a greenhouse 20x84 and a boiler and potting shed 10x30 to replace the structures sold last August to R. L. Burgoyne.

Scranton, Pa.

WYOMING VALLEY FLOODED.—LARGE GROWERS SUFFER LOSSES.—WELL KNOWN PLACES SUBMERGED.—WATERS REACH HIGHEST LEVEL EVER KNOWN.

The florists in Wyoming valley in Pennsylvania have suffered much loss by water during the recent floods. This beautiful valley has been one sheet of water. This historic ground is noted for its level stretches of land, dotted here and there with its little clusters of homes scattered in between the larger cities of Pittston and Wilkesbarre. On a bright, sunny day one can see, glistening like diamonds on the landscape, the various greenhouses, flourishing on the rich soil of the valley. Down upon all this came the waters of the Susquehanna, swollen to many times their natural volume by the tiny cascade, the larger streams and the melting snow and ice, which all along its way had been adding to it, and all this augmented by a severe rain storm. The whirling, rushing waters, with huge cakes of ice, brought destruction with them, as they descended upon the valley. The ice blocked below Wilkesbarre, causing this immense amount of water to spread over all this level ground, reaching at some points a width of three miles. The average width of the river is about a quarter of a mile. The height reached was thirty-one feet above low water mark.

Of the principal greenhouses in this section are E. E. Fancourt's, which are situated on a little higher elevation, and so fortunately escaped the spread of the water. B. F. Dorrance was not so fortunate, as his boilers are on a bank considerably below his greenhouses. The water got into these and prevented his firing for three days, and florists know what this means at this time of the year, so near Easter. Mr. Marvin has been the greatest sufferer of these three large places. He is on the opposite side of the river from Fancourt and Dorrance and on lower land. Some of his small houses were covered to the ridge, and, of course all of his benches were covered with water, and the only way of reaching the greenhouses was by boat, as the water was six feet above the level. We understand that he is pumping water out of his boiler pit to-day, the water having receded, it being nearly a week since the flood came. Such a misfortune would dishearten most any man, but Mr. Marvin, having stemmed the severe stroke of a cyclone some years ago, will ride difficulties under his feet and push ahead to greater success. I learn that Davies and Weiss, of Bloomsburg, and S. G. Bryfogle, of the same place, were nearly submerged.

These severe strokes to florists on the lowlands should be an everlasting lesson to these and all who contemplate building to build their glass castles high enough in the air to be above high water mark. SCRANTONIAN.

HORTICULTURAL SOCIETY HOLDS INTERESTING MEETING.—FINE DISPLAY OF CARNATIONS.—OTHER GOOD EXHIBITS.

The March meeting of the Lenox Horticultural Society was well attended. A very successful exhibition of carnations was held, White Cloud, G. H. Crane and Marquis being exceptionally fine in the competitive classes. New varieties staged in splendid condition from C. W. Ward, Queens, were Golden Beauty, Harry Fenn and J. H. Manley. From Peter Fisher, Ellis, Mass., came a grand vase of the new white, Governor Wolcott. A very fine collection of hybrid roses was shown by Mr. Lundberg, who also staged two fine plants of cuphea. Another interesting exhibit was six vases of Gerbera Jamesoni, shown by F. Brunton, Stockbridge, for Mr. Herrington, of Madison, N. J. A magnificent bunch of 300 Princess of Wales violets from J. Dallas was greatly admired. Following is the list of awards: Carnations, White Cloud, Marquis and G. H. Crane, first, J. W. Ferguson. First-class certificate to Peter Fisher for Governor Wolcott. Diploma to C. W. Ward for Golden Beauty, J. H. Manley, and a vote of thanks for Harry Fenn. Vote of thanks to J. Dallas for Mrs. G. M. Bradt, Ethel Crocker, Chicago and New York. Vote of thanks to Mr. Philcocks for Goodenough and Lily Dean. Vote of thanks to Mr. Loveless for Prosperity. Diploma to A. Herrington for Gerbera Jamesoni. Diploma to Mr. Lundberg for collection of cut blooms of hybrid roses, and vote of thanks for Cuphea hyssopifolia. Vote of thanks to J. Dallas for violets.

The society heard with regret that Mr. Herrington, who had arranged to deliver an illustrated lecture on hardy flowers, was prevented from doing so by sickness. F. H.

MOBILE, ALA.—A recent pretty wedding here was that of Miss Corinne, daughter of Col. Franklin P. Davis, and Wallace Fraser, of Brimingham. The home of the bride was handsomely decorated for the event, Golden Gate roses being the principal flower used.

Detroit.

FAVORABLE WEATHER AFFORDS ASSURANCE OF LARGE SUPPLIES FOR EASTER.—CLUB HOLDS INTERESTING SESSION.—PLANS FOR NEXT MEETING.

The continuous bright and warm weather so very exceptional in this latitude has greatly advanced the tardy Easter lilies that have been giving the growers such apprehension because of the early date of Easter this year, so that now a good and sufficient stock is assured. Some complaints are heard of the shortness of the plants, but otherwise a healthy condition of the stock, which is mostly longiflorum, is reported. A good supply of stock of all kinds is now available. An improvement in Beauties is noted, while violets are most excellent and selling well, as are, indeed, flowers of all kinds, and everyone looks forward to a record-breaking Easter trade.

The club meeting of March 5 was well attended and two new candidates were elected to membership. The subject of the evening was "In what way can the club be conducted to better advantage," assigned to Frank Holznagle, who read a carefully prepared essay on the subject, showing deep consideration, and outlined many plans for the club's improvement. The discussion which followed led to thoughts on many phases of the club's management.

J. F. Sullivan returned Sunday evening from Asheville, N. C., where he attended the executive meeting of the S. A. F. and at the next meeting of the club he will relate his observations and impressions of his trip. He is also assigned for the same meeting the subject, "Was the visit to the recent carnation meeting a profitable one?"

Herman Knope, who has been foreman for Geo. A. Rackman several years, will soon assume charge of J. Breitmeyer's Sons' Mack avenue establishment. The position he vacates at the former place will be filled by Wm. Flowerday, who for a long time has been employed on the place.

The two Franks of our club, Beard and Holznagle, were recently elected trustees of their respective villages of Woodmere and Highland.

Visitors: C. W. Ward, Queens, L. I.; Leopold Oesternei, New Rochelle, N. Y.; E. J. Fancourt, Philadelphia; A. L. Vaughan, Chicago. J. F. S.

WAUKEGAN, ILL.—James Armstrong has charge of the Northwestern railroad's greenhouses here, producing carnations for the dining cars and bedding plants for the station grounds.

Phrynium Variegatum.

An elegant variegated, green and white foliage plant of great value for decorative purposes and bedding. No florist with a good trade can afford to be without it. Tubers should be started now. We offer strong tubers at $4.00 per 100.

PHŒNIX PALUDOSA. One of the most valuable sorts of the Date Palm family for decorative purposes, well developed plants from 6-inch pots, $35.00 per 100.

DRACÆNA BRAZILIENSIS. Elegant broad leaved sort, valuable in decorative work, 5 inch pots, $20.00 per 100.

ASPARAGUS SPRENGERI, strong 2¼-inch pots, $1.50 per 100.

ASPARAGUS TENUISSIMUS, strong 2½-inch pots $3.00 per 100.

GUAVA CATTLEYANA. (Yellow) fine fruiting and decorative pot plant, extra strong 2½-inch, $3.50 per 100.

We offer a large stock of Crinums, Amaryllis and pot Oranges. Send for list.

Jessamine Gardens, Jessamine, Fla.

HILL PLACE IN FINE SHAPE AND EVERYONE BUSY —BIG SEASON IN ALL LINES.—GRAVES HAS SPLENDID CARNATIONS.

Things seldom looked better at E. G. Hill's, nor have they enjoyed a heavier trade in years. The demand for carnation cuttings has been unprecedented, such varieties as Dorothy, Glacier, Avondale, Lawson, Lorna and Estelle having been distributed in great quantities. California draws heavily for these favorites and even England is awakening to the fact that the American carnation is without a peer. The center of attraction to the visitor just now is Adonis. To speak of its merits would be simply a repetition of what has been written about it time and again. Nelson and Cressbrook are two pinks which have come to stay, although Dorothy and Lawson still hold their own. Chrysanthemum plants are selling well, the best varieties of recent introduction being much in demand. Timothy Eaton seems to be the universal favorite, while Col. Appleton heads the list of yellows. Geraniums, as usual, are being shipped in large quantities and the new ones, some of which bid fair to become standards, are equally in demand. Two additional houses of large size will be built in the early spring.

A call at the Graves place proved more than of passing interest. There I saw Dorothy in all its glory, both quantity and quality. White Cloud is grown to perfection and America could not possibly be improved upon. President McKinley, the new carnation for 1903, fully deserves the illustrious name. It is an ideal flower, possessing all the merits required by the average grower.

Chessman & Shepman have things in fine condition, both roses and carnations promising to come in heavy crop for Easter. They report a good business all along the line. NOMIS.

New Castle, Ind.

NEWS OF ANOTHER ROSE PRODUCING ESTABLISHMENT.—DITMAN TO BUILD.

The *Courier* of March 6 publishes the following: "William Ditman has severed his connection with the South Park Floral Company and will go into business for himself. Tuesday he purchased six lots in South Park upon which he will erect his range. The lots are well located. One fronts on Fourteenth street, two on South Park avenue and three on Fair street. Mr. Ditman will build two houses at first. They will be 200 feet long and he will devote them to the culture of roses. 'Billy' will undoubtedly meet with much success in his new venture as he is one of the best florists in the business. He has a thorough knowledge of the business and will produce some prize winners."

Chrysanthemums

Fine stock of all the best commercial varieties, strong rooted cuttings now ready. Monrovia, Robt Halliday, 4c.; Timothy Eaton, 3c; Golden Beauty, Nellie Pockett, Lavender Queen, Colonel Appleton, Feedu Champsaur, Superba, 2c.; White Bonnaffon, J. K. Shaw, October Sunshine, F. B. West Hoboken, N. J.

WELL KNOWN GROWER ADOPTS NOVEL BUT SUCCESSFUL MEANS OF OVERCOMING SMOKE NUISANCE.

For a long time E. G. Asmus has been put to much discomfort and no inconsiderable loss by the clouds of smoke belched from the chimneys of the Peerless Rubber Company, of New Durham, N. J., the works being in proximity to the greenhouses. The smoke was not only annoying but clouded the glass, obscured the light and reduced the crops of the houses to a greater or less degree. Mr. Asmus remonstrated ineffectually with the management of the rubber works, being told that there was no feasible remedy for the difficulty. Shortly after, he read of the installation by Bassett & Washburn, at Hinsdale, Ill., of a number of Jones under-feed stokers and of the resulting economy of fuel as well as consumption of smoke. Mr. Asmus posted himself as to these stokers, examining their working upon his recent visit to the west, and again presented the matter to the offenders, but they were still obdurate and he began suit for damages. Now the rubber factory has installed two of the mechanical stokers and the smoke pall is materially lessened. The balance of the battery of nine huge boilers will be equipped as rapidly as possible and then Mr. Asmus can breath freely again. Perhaps his experience may be useful to other florists whose glass is clouded by the smoke from near-by factories.

Toronto.

DECREASED DEMAND BRINGS DECLINE IN PRICES.—GOOD STOCK.—GREENS SCARCE. —VARIOUS NOTES.

The Lenten season has caused a drop in prices and tea roses are now quoted at $10 per hundred. Stock is in elegant shape and that sent to the rose exhibition by Dunlop will certainly be heard from. Bulbous flowers continue plentiful, but keep moving nicely. Asparagus, maidenhair and smilax are exceptionally scarce and very little is in sight for Easter. This cry is heard annually and there would undoubtedly be money in it for one who would go into greens extensively.

A meeting of the executive committee was held at Jay's for the arrangement of the prize list for the fall show, but with only a few changes and additions the schedule remains about the same as last year.

Chas. Tidy, "Ned" Dale and H. G. Dillemuth have gone to attend the rose society meeting at New York. H. G. D.

San Francisco.

SEVERE WIND BRINGS LOSS TO LEADING GROWERS.—TRADE SHOWS DECREASE.—A CHANGE IN FIRM.—LILIES BADLY DISEASED.—VARIOUS NOTES.

San Francisco and vicinity has again been visited by heavy wind storms accompanied by rains, flooding the lands and playing havoc among the growers of cut flowers, pulling off ventilators, leveling poorly constructed houses and breaking glass in every direction. Among the heavy losers are Schwerin Bros., at whose place ventilators were torn off and thrown into other houses. Bunean's fifty-foot smokestack was blown into a rose house. McLellan, of Burlingame, lost considerable glass, broken through pressure of wind. J. Jacquemet lost one large house and his wind mill was damaged. Grallert & Company, Colma, lost ventilators and others sustained more or less damage.

F. Baalhorn, of Nebraska, has bought a half interest in the Richmond Nursery, formerly conducted by Henry J. Kessell, and the new firm will be Kessell & Baalhorn. They are adding four new three-quarter span houses 16x120 feet which will be devoted to fern growing. The whole will be heated by hot water.

Lilies for Easter will be very scarce owing to considerable poor stock. Two out of three is the loss with almost all growers of lilies and the Japanese bulbs are the worst of all. The prices of the best lilies in pots will surely be $1 to $1.50 a plant and cut flowers $5 to $10 per dozen stalks.

Business has been not quite so good recently and prices are taking a downward course. Freesias and violets are sold for anything they will bring. Carnations also fell somewhat but are still in fair demand. Roses are steady and the same may be said of tulips and lily of the valley.

A great many elaborate funeral pieces for the late J. A. Fillmore were made by Sievers & Boland, Pelicano & Company, the Shanahan Floral Company and Podesta & Company, leading florists of San Francisco. GOLDEN GATE.

"THE BEST"

Adjustable Plant Stands.

This is one of the most useful contrivances a Florist can have, not only for decorating but for permanent conservatory and greenhouse use.

The special merits of this stand may be briefly enumerated as follows The three feet cause it to stand firmly on a carpet or uneven floor. The upright is of three parts telescoped being easily adjusted to various heights, fastened by means of thumb screws which are well made. The top flange will hold any ordinary pot upright, or by using the four-pronged crotch attachment, a pot can be placed on its side at two different angles, a very useful contrivance for temporary decoration.

Where large plants weighing two or three hundred pounds are to be elevated, three stands placed close together carry them safely, although the floor itself may be uneven. While possessing a number of advantages over any other stand in the market the price is lower.

1 Stand, $1.50; 3 Stands, $4.00; 6 Stands, $7.50; 12 Stands, $14.00

If your dealer does not keep them in stock order of

C. B. Whitnall, Milwaukee, Wis.

RIPPLEY'S

Whitewashing, Spraying and Painting Machine.

GUARANTEED to be AS REPRESENTED

GOOD WINDOW DECORATIONS BELIEVED A PROFITABLE INVESTMENT.—GRUMPF HAS GOOD SEEDLING.—NOTES OF DOINGS OF VARIOUS GROWERS.

A run over to Logan and a call on H. Grumpf revealed the fact that there is a good seedling carnation largely grown by this old timer and never introduced. It is of the Scott type but is said to be a better grower and more profuse bloomer. Mr. Grumpf's place looks fine, as does that of his friendly opponent, Mr. Voris, who is growing carnations, principally. Mr. Voris shifts his carnations to a 3-inch pot before planting out.

The store windows on High street, those of E. M. Krauss, J. R. Hellenthal, C. A. Roth and the Livingston Seed Company, with their decorations of azaleas and bulbous stock, are fine at this season of the year. They all take pride in making a show and are also convinced that a well decorated window is a profitable investment.

Howard Affleck has returned from a trip to Richmond and other points of interest, taking notes and getting some new stock for next season. This firm is now growing nothing except roses, but contemplates taking up the carnation again, growing fancy varieties.

It is generally predicted that bedding stock will be in better shape for spring planting this season, as Easter comes so early, giving the growers plenty of time after the Easter rush to look after spring stock.

Gravett & Son, of Lancaster, are still having a fine cut of carnations, doing White Cloud exceptionally well. While the Gravetts do a snug wholesale business, they also have a large retail trade.

CARL.

HUBBARD, O.—Judge Gillmer has made an order allowing E. C. Gething, assignee, to sell the effects of Hood & Cox, florists, for two-thirds the appraised value, which will more than cover the firm's indebtedness.

CONDITIONS FAVORABLE FOR EASTER BUSINESS.—STOCK SHOWING THE EFFECT OF FINE WEATHER.—VARIOUS ITEMS.

The weather is generally warm and bright and just what we need to get Easter stock into condition. From present indications lilies will not be very plentiful this year. The daily receipts of flowers are also showing the effect of plenty of sunshine, both in the increased quantity and improved quality. Although there has been nothing of especial interest to record since Lent commenced, trade has held up fairly well and stock keeps moving in a gratifying manner. Bulbous stock, which usually starts to pile up at this time of the year, is not being brought to town in overwhelming quantity, many of the growers having materially reduced their bulb orders. General stock was never better, the quality of roses, carnations, violets and valley being especially fine. Lange is cutting some fine snapdragons which are very popular with flower buyers on account of their keeping qualities and its delicate fragrance. A. H. L.

Riverton, N. J.

DREER CORPORATION TO BUILD BIG RANGE OF NEW STYLE HOUSES.—TWELVE STRUCTURES WITHOUT PARTITION.

The Henry A. Dreer Company has placed an order for a large addition, covering 25,000 square feet of ground, to their already extensive plant. The style of house adopted is the Dietsch patent short-roof construction and the material is to be turned out and shipped east by A. Dietsch & Company, of Chicago. One of the principal errands which took Mr. Eisele west recently was to take a look at this new style of construction. He visited Michael Winandy, at Rogers Park, Chicago, who has the only range of these houses which have had a practical test, and was well pleased with the style of construction, providing, as it does, for the most complete ventilation, at the same time doing away with the high peak of the wide houses.

The addition which Mr. Eisele has decided upon will consist of twelve of the two-bench houses, each 150 feet long. They will be built without partition walls and it will be practically one large house, the gutters being supported on iron posts and raised well above the benches.

LOWELL, MASS.—We are in receipt of a photograph showing handsome and well grown seedling cyclamen in 7-inch pot, but unfortunately the picture was so badly damaged in transit as to be unfit for reproduction. The plant was grown by Frank Sladen, gardener to Geo. W. Fifield.

VALUABLE IRON GUTTER PATENTS

I hereby offer for sale the Patents covering my Wrought Iron Gutter; also the Patents covering the Gutter advertised in last week's edition of the AMERICAN FLORIST, Florists' Exchange, and the Florists' Review, by Geo. M. Garland.

The increased business of the Standard Ventilating Machine demands my whole attention to its manufacture. But, as in the past I will give the gutter business its fullest share of attention until the patents are sold. Yours truly,

E. HIPPARD, Youngstown, Ohio.

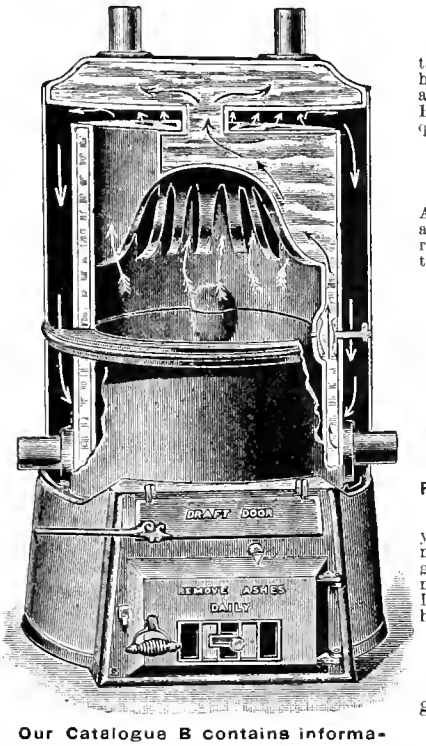
High Grade Heaters



Our Catalogue B contains information valuable to Floriste and will be sent with prices on application.

(ALL CAST IRON.)

In our **STANDARD BOILERS** the castings containing water have numerous shallow chambers that hang over the fire and immediately receive all heat and allow none to pass wasted to the chimney. The Boiler contains only three cored castings and is quickly erected.

NO WATER CASTINGS

Are exposed to outside air, but protected by cast iron asbestos lined casing which effectually prevents the radiation of the heat and causes the water chambers to be entirely surrounded by the heat.

SIMPLICITY OF OPERATION

WITH ENORMOUS EFFICIENCY IS THE CLAIM WE MAKE FOR THIS BOILER.

P. B. MAGRANE, Florist, Lynn, Mass., says:

"Your Standard Hot Water Boiler No. 32 is all that you recommend it to be. It does the work for me nicely that other boilers have failed to do. It heats a greenhouse 80x18 and also a large two-story barn and makes them quite comfortable in the coldest weather. I highly recommend it to any one as a first-class heater both from point of efficiency and economy."

We make a special price on the first Boiler going to a place where we have none in use.

GIBLIN & CO., UTICA, N. Y.

Camden, N. J.

BRIGHT OUTLOOK FOR EASTER BUSINESS.—BULBOUS STOCK AND GOOD PLANTS IN EVIDENCE.

The prospects for a good Easter trade are very flattering. The growers in this vicinity are doing their utmost to make the festival a success. The severe and inclement weather has handicapped outdoor trimming and lifting bulbs. The violent wind storm has made sad havoc of the trees in the parks and lawns hereabouts. The job was done in a very short time, but not as æsthetic and shapely as if done by pruning hook and saw. Modesty stood aghast in beholding the nude appearance of the trees in their tattered undress.

Hyacinths, tulips, narcissi, spiræas and cinerarias are in evidence at fair prices. There is quite an inquiry for violets, but wanted at fakirs' prices.

Two notable funerals recently required large quantities of funeral flowers.

Indications point to the extinction of the Harrisii lily at an early date.

C. W. T.

Springfield, Mass.

DARK WEATHER CUTS DOWN SUPPLIES.—PLANTS IN GOOD SHAPE FOR EASTER.

The weather has been very cloudy these two weeks, and from reports lilies, roses and carnations are going to be scarce for Easter. Potted azaleas, lilacs, spiræas, Ramblers, hyacinths and rhododendrons will be enough to supply the demand. Business is good, there being a good call for cut flowers of all kinds. Design work is quite brisk, quite a number being shipped to outside points. Violets are plentiful and good. A few single violets are to be seen and sell on sight.

W. Wilkinson, who has been engaged with L. D. Robinson, has gone to take charge of R. W. Day's private place in Agawan. J. Brundrett resigning to take charge of a place in Westerly, R. I.

TESTIMONIALS OF NINETY-SEVEN LEADING GROWERS SHOW THAT

THE GARLAND IRON GUTTERS

CONTAIN ALL THE VALUABLE POINTS OF MERIT CLAIMED FOR THEM.

90,000 FEET Have been put to practical test since I first advocated their use as an economizer. I am not offering to the public an article based on theoretical ideas; neither do I aim to duplicate sham gutters which are gotten up for the purpose of getting your money without value received, but I can show houses which have been up 13 years, and anyone who is inclined to persuasion by theoretical argument, as is set forth by people who would mislead them, should investigate more fully. Owing to the increased demand for my gutter and cast iron posts I have enlarged my foundry so that I will be able to fill orders promptly. My gutter is fully protected by patents, and if you buy the original, complications cannot arise.

The Easter Lily Trouble.

C. H. RONEY, JAMESTOWN, N. Y.

In regard to the lily troubles complained of in Philadelphia, we find it general through the country this season, of Japan longiflorum. We concur in what Mr. Michell says, that in the great eagerness of most growers to have lilies early lies a good deal of their trouble. We have noticed in the past two years that the "Japs" have not allowed the bulbs to mature and ripen properly. It can be readily traced to a small stem that still remains in the bulb when received and shows it has been cut out with some sharp instrument and that the bulbs do not have that bright golden yellow appearance that a well ripened bulb will have. I have found that all bulbs that have made a start, being bought a few weeks later, have all done well and produced good plants and well developed flowers. The bulbs with no vitality we have thrown away after we find they do not start, in a week or two after potting. If our growers will be satisfied with December for delivery of Japanese stock and not hurry shipment and give the bulbs time to properly ripen I think the loss would be reduced to a minimum. I have always insisted on getting my bulbs on the last shipment, but confess I do not know whether this has always been done, but I do know that the later bulbs will outgrow the earlier shipments and that there is no trouble in getting them in for Easter even when this festival is at its earliest date.

A. N. PIERSON, CROMWELL, CONN.

I have read the article on "Lily Troubles in Philadelphia" and find that the experiences of those whom it quotes hamonize fully with my own. I bought about 42,000 Japan longiflorum bulbs and, while I do not find many diseased ones among them, I do find a mixture of several varieties, each requiring a different temperature to bring it into bloom at the same time as the others. But this is not the worst of it. Between twenty-five and thirty per cent of the lilies have to be thrown out after growing them about two months because of their inferior quality. They are curled up and twisted and the sooner they are discovered and destroyed the better it is for the rest. They are utterly worthless, for even if you allowed them to bloom, the flower would be as imperfect as the stem, and of course unsalable. This defect cannot be laid to any one importer, as I bought my bulbs from several of the leading houses in this country, with exactly the same result. Those bought for multiflora were mixed in the same way.

The same is true of the Bermuda lilies of late years. Last year I bought 37,000 Harrisii. These were potted and grown until about eight inches high. Then enought of them were planted out to fill two houses. It was expected that they would be in bloom, one house for Thanksgiving and the other for Christmas. We did cut some at these times and have been cutting from these two houses ever since. About one-third have not flowered yet and I am confident will not be in bloom by Memorial day, although all have been treated exactly alike. A good many of these bulbs are mixed Japan longiflorum, that have probably spent one or two seasons in Bermuda and then been newly christened Harrisii.

A few years ago I bedded out lilies in this way and had the whole house in perfect bloom at one time. But after my experience this year I shall not bed any more Harrisii lilies. If there is any truth in the old saying that "Misery loves company," it may be comforting to our Philadelphia friends to know that the "lily troubles" are not confined to their city alone.

ANTON THEN, CHICAGO, ILL.

My longiflorum lilies this season started good and strong. I thought I would have the best lilies this time, but in four to six weeks after we brought them into the house about one-third commenced to curl up, and we began to work with the wheelbarrow and the pile outside grew to be a nice ornament. You all know what this means.

One of my shippers told me last year that we growers don't put the bulbs deep enough in the ground when first potted. This year I started them in 6-inch pots two inches deep and plunged them outside until rooted. They were handled with the best of care, but I found the same trouble and lost 1,500 out of 3,500 bulbs.

Now I wonder what is next. My idea is that the bulbs are taken up before they are ripe and, second, that lilies grown on the same land for many years are getting like potatoes, no good. Third, I think over-production is a cause; fourth, if the growers will demand better stock and not pay for poor bulbs (if prices were again as high for good bulbs it will save time, labor and space) we soon will have better lilies for Easter, without having the headache for two or three months previous.

Tobacco Dust Fumigating Pan.

The accompanying illustration is from a photograph of a pan which we are using for fumigating with tobacco dust. It is by far the most effective method we have ever tried, also easy to manage and inexpensive. Take an ordinary "dripping pan" 8x12 inches, cut the bottom out, leaving a margin of the same of one inch. Fold the piece so cut out to form a "leg," to tilt the pan, and rivet it on. Take fine wire netting, folding the four sides to give it strength, and insert in place of the bottom which has been cut out, letting it rest on the shoulders which were left. Fill about one-half full with tobacco dust. Put a little kerosene oil at lowest point of pan to ignite the dust. It will not flame but will smoulder for several hours and will effectually dispose of the aphis.

Eight pans to a house 18x100 are sufficient. The dust costs about 50 cents per 100 pounds and that quantity will fumigate twenty to 25,000 feet of glass two to three times.

The writer is indebted to Chas. H. Allen for this method of fumigating.

L. E. MARQUISEE.

PAN FOR FUMIGATING WITH TOBACCO DUST.

Philadelphia Easter Stock.

A tour among the growers of Easter stock just now is a great pleasure; in fact it is inspiring. He must indeed be of a very phlegmatic temperament whose nature is not stirred as he passes from one house of well grown plants to another, which, just bursting into bloom, shows the perfection of the "art which doth mend nature."

The features of this stock may be said to be Robt. Scott & Son's house of Crimson Ramblers. The first sight of this gorgeous mass of bloom fairly takes one's breath away. They are individually and collectively the finest I have ever seen. A very "creamy" lot of lilies are also to be seen here. They carry more flowers to the single stem than the great majority seen this season.

W. K. Harris' house of bougainvillea is perhaps the second feature in this grand display. This is another breath suspender, as one hesitates for words to do it justice. Why don't others undertake this plant? It should be a money maker everywhere. Mr. Harris is also in it with his hydrangeas, which are as near right in color, both pink and blue form, and flowering condition as it is possible to get them. His blue ones at $15 are stunners. The azaleas are also gilt edged and in good variety, the Vander Cruyssens being of beautiful color. A house of deutzias, two of spiræas, a lot of bulbous stock and a fine lot of valley in pots and pans, and we must mention some choice rhododendrons and lilacs, and a house of genistas, which are grown better here than anywhere else in the country.

Robert Craig & Son have perhaps the greatest variety of well grown stock to be seen anywhere. Although a great many lilies were thrown out, yet thousands of very fine plants are seen, just right for the season. Azaleas are the strong point here; house after house of the choicest stock is to be seen, each if anything handsomer than the other and seemingly right to the hour in point of time. Two large houses of Ramblers are also in great shape but nearly all marked sold Spiræas here are also well flowered, many of them the new Gladstone. Messrs. Craig & Son are also very strong on bulbous stock and have thousands of tulips and hyacinths in pots and pans, which are almost worth a journey to see. Double flowering cherries, acacias and hybrid roses about make up the assortment, which is fully up to the standard of former years.

Hugh Graham has a fine lot of lilies, very well grown, and azaleas in quantity, also some extra quality hyacinths. H. A. Dreer confines his Easter assortment to azaleas, of which they have an elegant stock, all of last fall's importation. George Anderson has his usual fine stock of lilies, now all sold. J. W. Colflesh is strong in lilies and azaleas, which with daisies, hydrangeas and cinerarias and a line of bulbous stock make up the assortment. Jacob Becker has his usual lot of choice azaleas and a fine batch of lilies.

James Cole has a nice lot of azaleas, lilies, geraniums, heliotrope and cinerarias. George Carpenter has a nice batch of healthy, well flowered lilies and hydrangeas. Julius Koehler has a good assortment of lilies, azaleas, daisies and bulbous stock. Westcott Brothers are well prepared with lilies, hydrangeas, cinerarias, daisies, spiræas and a great stock of hyacinths. Harry Faust has a nice Easter assortment of lilies, azaleas, genistas and bulbous stock The Floracroft Greenhouses, at Moorestown, have lilies, hydrangeas, Ramblers and hybrid roses, a scarce article this season. Sam'l Bunting is very strong in lilies and has a large lot in single and double plants. He has also a large lot of bulbous stock.

Taking the stock of the various growers collectively we have never seen a finer assortment and all look forward to a great business, for all the choice stock has been sold for weeks and at present the conditions are favorable to a complete sweep.

K.

Spring Exhibition at Boston.

The spring exhibition of the Massachusetts Horticultural Society opened Wednesday noon with the large exhibition hall well filled with multi-colored groups, spring flowering bulbs and other brilliant material, the view looking from the loggia being gorgeous in the extreme, lacking only a necessary setting of green background, for which no provision had been made, and which was afforded only in the groups of Farquhar and J. S. Bailey, both of which were effectively arranged.

The most extensive exhibitors were Ewell, bulbs; Bussey Institution, bulbs forced shrubs, herbaceous and wild flowers; Mrs. Cheney, Lorraine begonias, cyclamens and cinerarias; G. T. Fabyan and C. H. Souther, cyclamens; Botanic Garden, obconicas, lachenalias, cyclamens and violets not for competition; Mrs. Gardner, bulbs and primroses; Dr. Weld, ericas and hard-wooded plants. The most sensational feature was Pierson's Nephrolepis Piersoni, which received the rare distinction of a gold medal. It was pronounced the most notable introduction in decorative ferns since Adiantum Farleyense.

Wm. McAllister, gardener to Mrs. J. C. Whitney, showed Dendrobium nobile carrying over 1,300 flowers and was awarded a silver medal. The cyclamens, always grand in this show, were the best ever seen here. Cinerarias were fully up to the past averages. The bulbous material was uniform and good, Ewell's display being particularly varied and comprehensive. L. H. Foster received a certificate for Nephrolepis Fosterianna.

Cut blooms were shown in the small hall. Notable displays of orchids came from W. P. Windsor, Peter Murray, gardener, and J. E. Rothwell, E. Johansen, gardener, the first named receiving a silver gilt medal and the second a silver medal. A fine collection forty named hybrid perpetual roses came from Col. Col. Chas. Pfaff, Geo. Melvin, gardener. Helen Gould-Balduin and Liberty in excellent form were shown by the Waban Conservatories and Bride and Bridesmaid came from J. Pritchard.

Premiums were awarded as follows: For specimen azalea, to Dr. Weld; for Lorraine begonia, to Mrs. Cheney; for ericas, to Dr. Weld; for specimen orchid, to Mrs. Whitton, W. P. Winsor and Mrs. Gardner; for specimen stove plant, to Mrs. Gardner and Dr. Weld; for hardwooded greenhouse plant, to Dr. Weld; for forced shrubs, to the Bussey Institution and Mrs. Gardner; for primroses, to Dr. Weld and Mrs. Gardner; for polyanthuses, to Mrs. Gardner; for cyclamens, to Mrs. Cheney and C. H. Souther; for cyclamens in 7-inch pots, to Geo. F. Fabyan and Mrs. Cheney; for specimen cyclamen, to C. H. Souther and Mrs. Cheney; for six cinerarias, to E. J. Mitton, Mrs. Cheney, Mrs. Gardner and Dr. Weld; for three specimen cinerarias, to Mrs. Cheney and Mrs. Gardner; for specimen cineraria to Mrs. Gardner, E. J. Mitton and Mrs. Cheney; for hyacinths, two firsts to Dr. Weld, to E. S. Converse one first, to Mrs. Gardner one first and three seconds, to the Bussey Institution one first and three seconds; for tulips to Warren Ewell one first, one second and a third, to Dr. Weld one second and to E. S. Converse one second; for narcissi and jonquils, to Dr. Weld three firsts and one second, to Ewell two firsts and one second; for lily of the valley, to Bussey Institution, Ewell and Peter B. Bradley; for crocuses, to Bussey Institution and Ewell; for ixias and tritomas, to Dr. Weld; for Roman hyacinths, to Weld, Ewell and Bussey Institution; for general bulb display, to Bussey Institution and Ewell; for cut roses all prizes for perpetuals to Col. Chas. Pfaff; for Bride and Bridesmaid to John Pritchard; for Liberty to Waban Conservatories.

On carnations, which were a feature of the second day, M. A. Patten was first for Marquis, Lorna, Bradt, Lawson and Roosevelt, second for Morning Glory and Wolcott. Peter P. Bradley was first and second for vase of 100 blooms.

The weather was rainy and disagreeable during the first two days.

The Toronto Carnation Show.

The third annual carnation show of the Toronto Gardeners' and Florists' Association was held in the Pavilion of the Horticultural Gardens, on March 13, and both from the number and quality

of the blooms shown this meeting was certainly the most successful of its kind yet held in this vicinity. This meeting is practically a carnation meeting of Canada, and it is as much looked forward to as the one which is held by our brothers across the line.

The weather was very favorable, and nearly all shipments which arrived from a distance came in very good condition. A very large number of people inspected the display, and the result cannot be other than beneficial in giving the carnation one of the first places in the florist business. Something over 5,000 blooms were shown, many of which were the new varieties. The best was Adonis, shown by the E. G. Hill Company, of Indiania, and was awarded the challenge cup, which was offered by the horticultural society. L. E. Marquisee, with Empire State, was second, and the Dale estate, with Gov. Roosevelt, was third. The Chicago Carnation Company sent a nice vase of Mrs. Potter Palmer, which is a fine bright red and worthy of praise. R. Witterstatter sent a nice lot of Enquirer, which were fine blooms but a little off color. Dorner's exhibit arrived sleepy, but Bassett & Washburn put up a particularly good exhibit. C. Warburton showed Cresbrook, which was a very nice pink with good stem. J. Gammage & Son, of London, put up a nice table of carnations.

R. Jennings, of Brampton, showed some nice Beauty roses and carnations. The Dale estate, Brampton, showed Lorna, which was very good. Wm. Fendley had a good display of carnations and violets.

Among the local exhibitors, J. H. Dunlop had the largest exhibit of carnations in the hall, having several tables filled with the newer varieties in splendid shape. His vase of Lawson were very fine flowers but a little off color. Mr. Dunlop also received special mention for his exhibit of azaleas and rhododendrons. The Toronto Floral Company showed a fine vase of mixed carnations, and Manton Brothers showed a nice exhibit of orchids. W. Lawrence had a good exhibit of carnations, lilies and roses, and Jay & Son had a fine display of mixed plants and good carnations. Exhibition Park had a fine collection of flowering plants, and Horticultural Gardens a fine exhibition of plants. The judges were D. G. Manton and F. Dicks, of London.

The visitors were Messrs. Gammage and Dicks, of London; Webster and Brown, of Hamilton; Fendley, Jennings, Webb and Watkins, of Brampton, and Ewing, of Berlin. H. G. D.

The Effect of Ether in Forcing Plants.

In *Le Jardin*, M. Albert Maumene summarizes the results of experiments under the above heading at the experiment station at Dresden, the gist of which we give herewith:

In the early forcing of shrubs no one can neglect the advantages resulting from the use of ether. The commercial man must take into account that certain species can not only be brought into flower earlier and thus bring an advanced price, but that they occupy the houses a much shorter time and thus the expense of growing is greatly reduced. It is stated by the author, as a proved fact, that the saving in the time required in the house will more than cover the additional expense of the process, having the advanced price obtained by being first in the market as a net profit.

EFFECT OF ETHER IN FORCING PLANTS.
Etherized plant of Lilac Marie Legraye in bloom.

Experiments with the lilac, the varieties used being Marie Legraye, Charles X and Leon Simon, showed the flowers fully expanded in eighteen days after being brought into the houses, Marie Legraye being even earlier than this. In the forcing of shrubs for a very early date, while those not treated have flowered only poorly, the treated plants have produced much better flowers, eight to ten days earlier. Etherized plants are even found to force at a much lower temperature than those not so treated. In addition to the lilacs, Azalea mollis and the viburnums responded readily to the treatment; Prunus triloba was more rebellious; while the flowers of Deutzia gracilis were spoiled. Lily of the valley, etherized and placed in heat (about 75°) on November 21, flowered forty per cent, while those not etherized flowered only two per cent. For much later forcing the ethering process does not seem advisable. In treating roses so marked a success has not been shown, although the flowers were earlier. Cut branches of Azalea mollis flowered in twenty-three days, while branches not so treated were twelve days late. Viburnum plicatum, etherized and placed in heat December 2, was in full flower on the 14th, while the plants not etherized flowered very poorly a long time later. Azalea mollis treated November 26 and brought into the house November 28, was covered with flowers on December 20, although the untreated plants were only poorly flowered in early January. As the normal flowering season approaches, the action of ether becomes less and less marked, so that its use is especially indicated for the months of November and December.

The application of this process requires, of course, considerable care. The vapor of ether is very inflammable and the work must be done in the absence of fire and artificial light. The box or apartment in which the plants are treated must be absolutely tight, as the vapor will otherwise escape, for they must be in an evenly etherized atmosphere about forty-eight hours. Arrangements must also be made for rapid and complete ventilation when the exposure has been sufficiently long. The article from which we condense this account is accompanied by illustrations of the subjects, treated and untreated. With the lilac, Marie Legraye, and Viburnum plicatum tomentosum, the flowers and foliage on treated plants were fully expanded while the buds on those not treated were just beginning to

swell. It is worthy of note that the lilac foliage on the treated plants was developed with the flowers and was vigorous and of good color, instead of weak and pale, as usually occurs in early forcing.

We are indebted to Professor Ledien, of Dresden, for the photographs from which the accompanying illustrations were prepared. Some of the pictures appeared in *Le Jardin* first, however.

Rose Mrs. Oliver Ames in England.

With the rose of to-day, as seen on the exhibition tables, we are afraid there is an ever growing tendency towards delicacy and some of the most handsome forms in cultivation are too evanescent to be of use for cut purposes. That one of the varieties shown at a recent meeting of the R. H. S. committees at the Drill Hall, Westminster, was not lacking in the power of endurance was demonstrated by the fact of it having withstood a fourteen days' journey before being put on the show board. It was sent by John May, Summit, N. J., U. S. A. A grand bunch of it was shown and greatly admired, and their durability commented on by all. The blooms were large and deep. The prevailing color was shell pink, giving place in the center to salmon-pink, and on the outside to buff-pink. Some of the color may have been lost in the long journey, but it was still charming. The beauty of the blooms was greatly enhanced by the crimped and waved margins of the otherwise shell-like petals. The foliage, like the blooms, was in good condition and exhibited every evidence that the general habit of the plant was very vigorous. To crown all, the blooms were carried well up on stiff stems, so much favored and rightly so by the American growers, and possessed a pleasing fragrance. Roses are largely cultivated in the United States for winter work, and for this purpose they are grown upon benches under glass and forced for the sake of cut flowers. That the variety is well adapted for this purpose there cannot be a doubt.—*Gardening World.*

CHRYSANTHEMUMS.

FROM THE COMMERCIAL STANDPOINT.

Chrysanthemums for commercial purposes should be classed in three different sections, those which produce for the open market the highest grade of bloom; second, the cheaper grade of stock grown for the open market, the principal use for this class of stock being as a "fill-up," pushing it along with all possible speed and getting it out of the way in as short a time as nature will allow; third, the varieties of the grower who caters direct to his patrons and consequently has a wider field, he being in a position to be able to grow a larger assortment of the different forms, many of which are the most beautiful and artistic but too delicate for the rough handling in the commercial market.

In dealing with section one, when we aim to produce high grade blooms, the first business in order is to select the proper sorts to grow, and to do this and to make any money on them, we want only such varieties as will come near producing 100 per cent perfect flowers which will stand the wear and tear of getting them to market and give satisfaction to the buyer afterwards. The following is a list of varieties most suitable for this purpose:

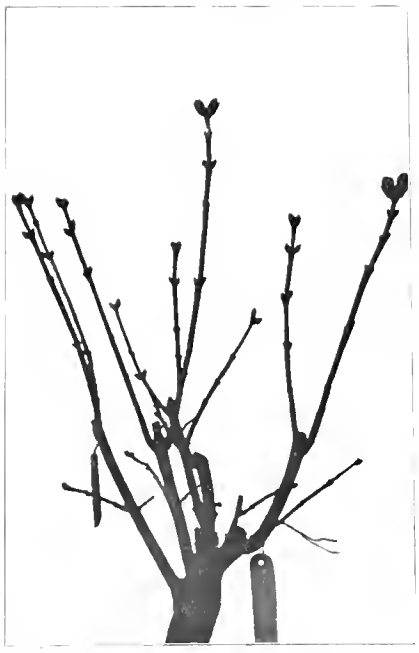
Yellow: Soleil de Octobre, Major Bonnaffon, Col. D. Appleton, Yellow Mrs. J. Jones and Golden Wedding.

White: Ivory, Mrs. Henry Robinson, Mrs. Jerome Jones, W. H. Chadwick and Yanoma.

Pink: Viviand-Morel, Lavender Queen and Superba.

Other colors: Chas. Davis and Geo. W. Childs.

These should be rooted between March 20 and April 1, potted into 2-inch pots and given a light place with a night temperature of about 50°. After they take hold of the soil it will be a very little while before they will need a shift. Attend to this at once, so as not to let them become root bound. Pot into 3-inch pots, giving them a little space between each plant when setting them on the bench to prevent their becoming drawn. It will be necessary to watch closely to see that the plants do not suffer for the want of water. This size pot will carry them along to planting out time, which should be soon after the first of June, after the usual work has been done in getting the house and benches ready.



EFFECT OF ETHER IN FORCING PLANTS.
Non-etherized plant of Lilac Marie Legraye before forcing commenced.

Always make sure of four and one-half feet head room for Ivory, Mrs. J. Jones, Yellow Jones and Soleil de Octobre. The other varieties will need a foot more. Choose a good, live, rich soil. Fresh soil that has been stacked over winter is the proper thing, with the lumps broken up, so it can be handled, but not so fine as if it had been sifted. A little of the fibrous turf mixed through the soil for the roots to work on I have found to be quite beneficial. Add about one part of cow manure combined with a sprinkling of horse manure to three parts of soil. After the benches are filled for kin a good dressing of bone meal, making the beds as firm as possible, setting the plants about eight inches apart each way. Syringe several times a day at the start to prevent wilting, after which they delight in a damping down two or three times a day and must be watered when occasion requires it and given all the light and air the house will allow.

The general routine of the work for a time after planting is to free the beds of any weeds that appear, keep all side shoots picked out and the plants free from aphis. After the plants have taken a good hold of the soil give the beds a light dressing of air-slaked lime and when the roots are found to be pushing up through the top of the soil a light dressing of well-rotted manure will be necessary, but after this has been put on do not allow it to become caked, but loosen it up every little while, being careful not to disturb the young roots too much.

In taking the buds on this early planted stock great care will have to be exercised or failure will result, therefore all side shoots or buds that appear along in July must be removed as soon as large enough to handle. By so doing you give the plants a show to mature and throw the right bud at the proper time, which in most cases will be about August 20. After the buds are taken the suckers from the bottom will begin to give trouble and should be removed as soon as large enough. When the buds have commenced to form apply a weak form of liquid manure and gradually increase the strength as the buds expand, letting down again as they begin to show color. After this keep all stems tied up and give particular attention to the ventilation at this time to prevent draughts should a cold, wet spell come on.

Stock for the second grade can be propagated at the end of April, during May or in the first part of June, potted up as soon as rooted and planted out on the benches between June 15 and July 15, or a little latter will do no harm for late varieties. In selecting varieties for this section we can add to the list chosen for the first section, all the well known early varieties, such as Lady Fitzwygram, Yellow Fitzwygram, Glory of Pacific, and such midseason and late varieties as Mrs. Perrin, Niveus, Mrs. Murdock, Mutual Friend, Xeno and W. H. Lincoln. To produce stock suitable for this trade the plants can be set close together but I would not advise setting them closer than five inches each way, and also after the plants take hold of the soil the tops can be taken out and the plants run to two or three blooms as you wish. With late struck stock some varieties will grow straight ahead and not form any bud until about September 1. It is perfectly safe to select this bud for the bloom and in most cases it will make the best flower.

Any florist, who grows for retail, will display mighty good taste by adding some pompon varieties to his list, also some anemones, both of which should be grown naturally, with very little if any disbudding. The plumed section should also come in for recognition here and will prove a big attraction. There are also several distinct varieties such as Iora, Mrs. F. A. Constable, Nyanza, Chito, Mrs. A. J. Drexel and several more mighty pretty things that do not find favor with the retail florists of large cities but could be used to good advantage by the man who grows to sell from the greenhouse. C. W. JOHNSON.

BIRMINGHAM, ALA.—There is bad blood between the two leading florists of this city and on March 15 they engaged in a game of fisticuffs in the street, but were separated by their friends before any harm was done.

EFFECT OF ETHER IN FORCING PLANTS.

Viburnum plicatum tomentosum; very bad grower early in season; both plants etherized November 14, flowering January 1.

WITH THE GROWERS.

MINNEAPOLIS FLORAL CO., MINNEAPOLIS.

A visit to the modern wholesale producing establishment of the Minneapolis Floral Company is most interesting. This is one of the largest places in the state, as well as one of the newest. John Monson, formerly superintendent for the C. A. Smith Company, is manager and part owner, Mr. Moulton, one of the successful bankers of the state, owning the principal interest in the concern.

The main plant consists of eighteen houses containing 75,000 square feet of glass. Five small sash houses contain about 5,000 feet additional. Their specialties are roses and carnations, while a general line of plants and bulbs are also grown.

In roses Meteor, Bride, Bridesmaid, Sunset, Liberty, Beauty and Queen of Edgely are grown. Meteor does well here. It is planted in a mixture of gravel and clay loam and fertilized very sparingly. Mr. Monson says he has always had best results with this sort by starving it. Liberty has done fairly well but is not considered profitable, as it comes into full crop only two or three times each season, the balance of the season producing only short-stemmed blossoms which do not sell well. Bride and Bridesmaid do well and, with Meteor, are the most profitable sorts to grow. The house of Beauties is a forest of growth but the plants were benched too closely and have not thrown as many long-stemmed blooms as they would have if planted otherwise.

Queen of Edgely is a most beautiful bright pink variety but as grown here lacks substance and will never take the place of Beauty, if it equals it. Sunset is still grown to good advantage, though not as profitable as some other sorts. A few plants of the old favorite Perle des Jardins are very strong and vigorous. A nice stock of young plants of the Helen Gould is being grown for another season's benching.

While a goodly number of grafted roses are being grown, Mr. Monson is an ardent believer in own-root stock. Quite at variance with most of the prominent growers, he claims to grow stronger, more prolific plants from rooted cuttings than from grafted stock, and the stock seen in his houses would seem to verify his theory. Club root is almost unknown here. This he claims is due to keeping the plants in a root-bound, dried-out condition. The roses here are grown in connected houses with iron gutters, butted glass, short span to the south. The houses were built under Mr. Monson's personal supervision and according to his plans.

In carnations the most pleasing, prolific and profitable sort grown is Prosperity. The blooms are extra large and possessed of great keeping qualities. The stem, however, is not strong enough for its enormous load of bloom. Lawson, grown in the same house, has also done very well but throws fewer buds. This variety develops its buds very slowly, while Prosperity develops very rapidly.

Nearly all of last year's novelties were tried here, with varying results. Lorna and Norway are both good whites. Marquis does very well. Crocker and Olympia are too shy bloomers to be retained. Bradt is profitable. Crane and Jubilee are both good reds but Estelle beats them in color.

For Easter trade a fine lot of hydrangeas in bud and bloom are very showy and attractive. In addition to these choice plants a fine lot of azaleas, pæonias, hybrid roses and lilacs are being pushed along for Easter trade. Lilies were rather disappointing, so many of the bulbs being diseased. Bostons, Sprengeri, Asparagus plumosus and palms at this establishment are all in fine shape. Violets were planted in the ground in early summer and sash houses built over them. Stock is looking fairly good.

Next season another large addition and improved heating facilities will be completed. With ample resources, an ideal location and an enthusiastic, energetic, experienced manager, this firm is bound to push to the front and build up a most prosperous business. FELIX.

To Writers.

The following advice is taken from an English contemporary: "There is a man the printer loves, and he is wondrous wise; whene'er he writes the printer's man he dotteth all his i's. And when he's dotted all of them with carefulness and ease, he punctuates each paragraph and crosses all his t's. Upon one side alone he writes and never rolls his leaves; and from the man of ink a smile and mark 'insert' receives. And when a question he doth ask—taught wisely he hath been—he doth the goodly penny stamp, for postage back put in. And thus by taking little pains, at trifling care and cost, assures himself his manuscript will not be burned or lost. So let those who long to write take pattern by this man, with jet black ink and paper white, do just the best they can; and then the printer man shall know them as his friends, all through life's journey as they go, until that journey ends."

EFFECT OF ETHER IN FORCING PLANTS.

Viburnum plicatum tomentosum; flowering plant etherized November 14, flowering January 1. The other non-etherized plant died through being placed in heat too early.

Chicago.

WEEK A FAIRLY BUSY ONE.—SHIPPING TRADE BRISK.—OCCASIONAL SHORTAGES DEVELOP.—EASTER PROMISES TO CLEAN UP EVERYTHING IN SIGHT.—LEADING RETAILER SELLS HIS LEASE AND SECURES A NEW LOCATION.—SCHUBERT TO RETIRE.—PLANS OF THE GROWERS.—VARIOUS PERSONAL AND TRADE NOTES OF INTEREST.

This has been a fairly active week in the local cut flower market, with good demand from outside sources. Local trade is beginning to pick up in good style and there is a prospect of very fine business before the city retailers for the next few weeks. They are all confident of a good Easter and are laying in such supplies of well-grown plants as are obtainable. For the past few days the shipping demand has been steady and has consumed the receipts fairly well, with occasional shortages. On Wednesday afternoon it was impossible to fill late orders for white carnations, although early in the day there had been liberal quantities in sight and of colored stock there was an abundance, in fact rather more than could be moved to advantage. Every indication points to a very large supply of carnations for Easter, also to good cuts of bulbous material, but in general the local houses are not hustling for orders which require first-class tea roses, the supply being too uncertain. The big growers are coming in with splendid cuts of long Beauties and anyone who has use for this material at from $5 to $6 a dozen can get what he wants in this market of as good a quality as he ever had the pleasure of handling. Bulbous stock in general is fairly plentiful except Harrisii. It is figured that the shortage of Easter lilies will make a market for other material and the wholesalers are all satisfied that they have a big Easter business right at hand.

John Mangel has sold the lease on his store at the corner of State and Washington streets to Otis Wilson & Company, bankers, and will vacate May 1. He is said to have received $12,000 bonus for his contract. John C. Schubert will retire with the end of April and Mangel has made a lease upon the Schubert stand at the corner of Wabash and Monroe. H. C. Rowe, who has been with Schubert for some time, has made a lease upon a very nice store in the Windsor Clifton Hotel and will go into business for himself at the end of his engagement with Mr. Schubert.

A dozen blooms of Peter Fisher's new carnation Enchantress received by a local firm, March 11, were still in good condition a week later. This certainly speaks well for the keeping quality of the variety, which Mr. Fisher claims is better than Mrs. Lawson.

Peter Reinberg agrees with those growers who, in the last issue of this journal, said they think Liberty is a coming rose. He has 10,000 grafted up on Manetti for this year's planting. Bassett & Washburn will also go in heavy on this rose next year.

The Chicago Carnation Company is reported to have decided to go into roses, building at once a good sized range for them. It is a move which will undoubtedly add much strength to their already firm position in the trade.

The Chicago Florists' Club will give its annual ball in the drill hall of the Masonic Temple on April 8. Tickets are on sale at the wholesale houses at $1 each.

Wm. Dittman was in town this week and ordered the material for his new greenhouses, the cypress from Moninger and the glass from Rice.

J. P. Risch says that the Easter demand is assuming very fine proportions and that he thinks lilies will prove to be not the only shortage.

Andrew Miller, of John Mangel's, who has been in ill health, will be home in a few days from a western recuperative trip.

E. H. Hunt is showing samples of some particularly nice hydrangeas, low plants with tremendous trusses of bloom.

George Reinberg is getting ready to push his building operations as soon as the Easter rush is over.

J. D. Thompson reports that his sales of carnation cuttings have been excellent thus far this season.

John Degnan, of the McKellar & Winterson Company, is at home from his eastern trip.

John F. Cowell and Emil Buettner will officiate as judges at the coming fall exhibition.

There are signs that the growers are pickling again.

New York.

MARKET QUIET.—LILIES AND CARNATIONS SHOW THE ONLY IMPROVEMENT.—BEAUTIES NOT SO STRONG AS WOULD BE LIKED.—SIEBRECHT HAS FRAGRANT CROPS.—GERTRUDE HYACINTH A GOOD THING.—VARIOUS NOTES.

No change of any special interest has occurred in the cut flower business since last week's report. Trade is quiet generally and except on carnations and lilies prices are unchanged, these two specialties having stiffened up somewhat. The supply of carnations has shortened up, particularly the white varieties. This does not, however, indicate any scarcity for Easter but probably indicates the reverse. The market for American Beauties is not all that could be desired. They are more plentiful and with the decreased demand tend to weaken in price. Other varieties of roses are in moderate supply. Bulbous stock is noticeably lighter in receipts. Tulips and daffodils sell much better than they did last week and leave no surplus. Violets are also decreased in volume and consequently are moved at better advantage. Orchid supply is light and the market for greens has improved. Some very good Jacqs have made their appearance.

One can almost find the establishment of W. H. Siebrecht at Astoria, at present, by the perfume of hyacinths, lily of the valley and other fragrant things that abound there, without the use of eyes. Calling there the other day we found that industrious gentleman busy clearing out the last of the bulb boxes from the big storage shed to make room for the lilies, which will be moved there as fast as they reach the proper point of development. There is, however, no great necessity for holding lilies back this year, either at Mr. Siebrecht's or elsewhere in this vicinity, for it will take all the time until Easter to get the greater part of the plants into bloom.

Von Asche, who occupies the houses of Alex. Burns, at Woodside, has several houses of as handsome azaleas as are ever seen in this market but they are all sold. That is the plant growers' luck, something that doesn't come to the flower growers nowadays. Hyacinth growers should make a note of the single pink variety, Gertrude, which Mr. Von Asche grows in large numbers and which always brings the top price. A little tipping outward of the outside row of bulbs in the pan at the time of planting spreads the spikes nicely and brings the foliage well over the edge of the pan.

Ernst Asmus has given to Hitchings & Company the contract to erect a new house 54x400 feet at Closter, N. J.

John DeWolf has resigned the position of landscape architect of the Public Park department, and Sam'l Parsons, Jr., who has been superintendent of parks for a number of years, has been appointed his successor.

Visitors: H. H. Battles, Philadelphia; C. A. Leighton, Skowhegan, Me.

Philadelphia.

ANNUAL SPRING EXHIBITION BRINGS OUT A NICE LOT OF SEASONABLE PLANTS.—GOOD ROSES AND CARNATIONS SHOWN.—BUSINESS NOT HEAVY.—ALL THOUGHTS CENTERED ON EASTER.

The spring exhibition of the Pennsylvania Horticultural Society opened last Tuesday afternoon. There was a nice display of bulbous stock, which might be said to be the feature of the show. Next in importance were Primula obconica and Cineraria stellata, of which there were several nice entries. H. A. Dreer had a table of rare plants in the center of the hall, in the middle of which was a well colored plant of Pandanus Sanderi. John Westcott had his usual group of foliage and flowering plants. John Gaynor had a group on the opposite side of the hall which contained a great variety of plants, most of which were in bloom. There were several entries of lilies, mostly Harrisii. They were all tall and without a trace of disease. Edwin Lonsdale staged some nice plants of his light begonia, Gloire de Lorraine. They were very well flowered. The rose and carnation competition was held on Wednesday. John N. May had a fine vase of Mrs. Oliver Ames and Stephen Mortenson another of extra Liberty roses. There were three entries in the American Beauty class. Adolph Fahrenwold was first with a vase of twenty-five magnificent blooms, while John Burton took second with roses that would in most cases have taken first. In the carnation classes Marquis won from Prince Henry, a flower of Daybreak color, with a good stem, exhibited by Hugh Graham. Robert Craig & Son were easily first with a vase of fifty Adonis. The blooms were exceedingly fine and very much admired. As compared with the fall show the hall had an empty look. Perhaps it is not practicable, but it certainly would add much to the appearance of the show, if the society would have the hall decorated and laid out according to some well planned scheme that would be attractive in itself, and at the same time make an appropriate setting for the exhibits.

Business the past week, with the exception of some anniversary dinners and St. Patrick's day celebrations, has been dull. Speaking of St. Patrick's day, we must refer to W. K. Harris' success with his house of shamrocks. Twenty thousand 2½-inch pots of these plants were sold in two places. All the large florists handled them in quantities. The shipping trade was also very large, as the novelty of the shamrock-shaped pot seemed to take the public fancy, and very few were left unsold. Prices of flowers are about the same as last week, although a good shipping demand has kept the stock from accumulating.

Everybody is busy getting ready for the grand rush. Most of the large stores

have rented additional space in adjoining buildings, which are classified as annexes. Charles Thomas has taken a large store a few doors from Pennock Brothers, on Chestnut street, which is filled with Easter stock. The success of these ventures depends largely on the state of the weather. At present it is blowing great guns and it would seem as if such light structures as greenhouses would be blown away. However, we hope for better weather next week. K.

Boston.

SLOW WEEK BUT HORIZON CLEARS.—OVERSTOCK NOW UNDER CONTROL.—NO PROSPECT FOR HIGH PRICES FOR EASTER.—TRADE DOINGS OF MINOR IMPORTANCE.

The past week has been a very slow one for the flower trade and has brought to the grower and wholesale dealer many problems hard to solve. The street fakir has had his innings and made the best of it, for the weather has been sufficiently mild for him to expose flowers during most of the day without any danger of injury from the cold or the heat. Violets have been his best hold and he has unloaded them by the tens of thousands for the puzzled dealers, but at his own figure. Yet, while there is no prospect of a better demand until close to Easter Sunday, it is evident to anyone versed in the ways of the flower business that the worst of the trouble is now over and that the overstock which has impeded all progress during mid-Lent need no longer give any great concern. Growers from now on will cut sparingly and ship only such material as must be shipped. All flowers that can be retarded will be retarded and in the meantime a better value may be obtained for the stock marketed. As to the Easter values, nobody seriously expects any material advance beyond the average prevailing price in an active market, excepting on a limited quantity of very fancy stock.

George Melvin, gardener to Col. Pfaff, received a certificate of merit for cultural skill displayed in an exceptionally fine specimen of Oncidlum Cavendishianum shown at Horticultural Hall on Saturday, March 8.

Mr. Warburton reminds us that his Cressbrook carnation scored 91 points at the Park street exhibition, an item which somehow did not get into our regular report thereof.

Chas. Ingram is sending to Welch Brothers the first samples of a crop of longiflorums of unexcelled quality.

The announcement is out of the engagement of Harlan P. Kelsey to Miss Low, of Salem, Mass.

Visitors: John P. Brown, Connersville, Ind., secretary of the International Society of Arboriculture; Martin Reukauf, representing H. Bayersdorfer & Company, Philadelphia; H. S. De Forest, of Hitchings & Company, New York.

Worcester, Mass.

SOCIETIES HOLD ANNIVERSARY OBSERVANCES.—A FINE SPRING EXHIBITION.—VARIOUS NOTES.

The Massachusetts Fruit Growers' Association held its eighth annual meeting in Horticultural Hall, March 12 and 13 and elected the following officers: President, A. G. Sharpe, of Richmond; vice-president, Jonathan Eames, of Sherburn; secretary, C. A. Whitney, of Upton; treasurer, Ethan Brooks, of Springfield.

The Worcester County Horticultural Society observed its sixty-second anniversary March 12 with a reunion and banquet attended by more than 300 members and guests. Chas. W. Wood acted as toastmaster and among the speakers were President Hadwen, Mayor Fletcher, H. E. Van Deman, pomologist of the Pan-American Exposition; and Miss Louise K. Miller, of the Lewthorpe Horticultural College at Groton. After the banquet dancing was enjoyed till a late hour.

The spring exhibition of the Horticultural Society was held March 13 and was the best spring show ever held in the hall. The competition was very keen and all the classes had many entries. Cyclamens and azaleas were especially fine and the quality of primulas, hyacinths, tulips, lilies, violets, Lorraine begonias and cinerarias was excellent. A fine lot of carnations was staged, including nearly all the 1901 novelties. Following are the first prize winners four prizes being awarded in each class:

E. W. Breed on hyacinths, Primula Sinensis and azaleas; H. F. A. Lange on carnations and cut flowers; M. J. Whittall on Primula obconica; F. A. Blake on specimen azalea and his seedling carnation Bonnie Bride: Mrs. J. C. Whitin on cyclamens and L. C. Midgley on cineraria. Mrs. J. T. Whitins staged a fine lot of orchids. A. H. L.

Baltimore.

CLUB BANQUET PRECEDED BY A BOWLING MATCH.—BOSTONIAN ENTHUSIASTIC AS TO HORTICULTURAL POSSIBILITIES OF THE SOUTH.—OTHER MATTERS.

The annual banquet of the Baltimore Gardeners' Club was held March 10, and among the guests were Messrs. Burton, Kift, Cartledge, Starkey, Watson and Gibson, of Philadelphia, and Mr. Mathison, of Boston. Some of the gentlemen mentioned had just returned from Asheville, N. C. A bowling match preceded the banquet and the result was that Philadelphia was badly beaten, the score being Baltimore 2297 pins, Philadelphia 1995. Kift and Starkey made the best average for Philadelphia and Seybold and Lehr for Baltimore. The Baltimore team has been invited to play Philadelphia a return match in the near future. F. R. Mathison, in responding to a toast at the banquet grew quite eloquent over the possibilities of North Carolina as a bulb and flower growing state, in which both Messrs. Burton and Cartledge concur. Mr. Mathison said the southern states are not taking full advantage of their wonderful resources and that there is a great opportunity to make North Carolina famous as a producer of flowering bulbs. Ninety per cent of the bulbs are now imported from the other side, costing millions of dollars annually, and all should be grown in the Carolinas. These states should not only grow enough to supply our demands, but even those of other countries. North Carolina lilies of the valley and tuberoses, too, are better than any the speaker had ever seen. Everybody is enthusiastic about the beautiful country around Asheville as a result of the trip and the great speeches made by our worthy president, Mr. Burton, and Mr. Mathison. We hope to have a good delegation for our next convention.

The stores are profusely decorated and those of Halliday Bros., Seidewitz, Feast and Cook are very artistic. Roses are far from being plentiful and are commanding a good price. Harrisii and longiflorum lilies are equally scarce, but other bulbous stock is plentiful. Seidewitz has done a good business with his fine stock of primroses and azaleas, as did Halliday Brothers with their fine carnations. The Lawsons of Halliday Brothers are now very superior in quality to what they were at first.

I would advise our growers to look into the matter of herbaceous plants for spring, summer and fall bloom, for there is practically nothing in the line of cut flowers during the heated term. We certainly have hundreds of excellent herbaceous plants to select from.

Pittsburg.

STATE OF TRADE AND THE PROSPECT FOR NEXT WEEK.—GROWERS HAVE GOOD STOCK.—BATCH OF BREEZY COMMENTS.

The condition of business during the past week was very unsatisfactory. Of course we expected little from the social events, but the absence of funeral work was very noticeable. Mr. Langhans, of the Pittsburg Cut Flower Company, states that there was a big increase in their out of town business. The activity in shipping orders was sufficient to give a fair week's business. This feature was most acceptable as the city stores have little need of cut flower stock. The condition of stock is fair, although the largest portion of the home and eastern roses seem to possess that limpid state of transparency that clearly indicates that they had been retained too long on the plants. The finer varieties of carnations are holding their own in quality and prices. Sprengerii has improved greatly within the past few weeks. It is reported that A. W. Smith, Charles Koenig and Mr. Burki will be fairly successful with their lilies and other bulbous stock. There seems to be a difference of opinion regarding the supply of lilies. Some of the growers are bitterly disappointed over the condition of their stock, and the small bulbs seem to be bearing the brunt of the attack.

J. B. Murdock has secured two very large orders for trees; about 800 is the quantity. Mr. Murdock states that the demand for nursery stock will be exceedingly great this year and his orders to date are such that he will have to go east to purchase stock of this character.

Charles Crall, of Monongahela city, informs me that he intends to erect several new houses, and may extend some of the present ones. His plant is already very large, but he is progressive and in business for money.

The Pittsburg and Allegheny Florists' Club held a social meeting last week. Euchre, bowling and lots of conversation and good feeling was the order of the evening.

Thomas Nelson is shaping things for Easter. He always does a big business and his output of funeral work in a year is something remarkable.

Miss Maxwell, of Wilkinsburg, is thoroughly satisfied with the outlook for Easter. She expects a large increase of business over last year.

Mr. Dunlevy, of Scott township, is in a good humor over the outlook of his stock for Easter. E. L. M.

SALEM, MASS.—The Salem Flower Company opened a new store on Essex street on March 1.

NEW ORLEANS, LA.—Henry Rehfeld, a florist, has been arrested for stealing plants from the Metairie Cemetery. It is charged that he has made a number of thefts and when detected he was carrying a basket with about $10.00 worth of stock.

St. Paul, Minn.—Holm & Olsen, three houses.

Middletown, O.—Jos. Goldman, two houses.

Closter, N. J.—Ernst Asmus, house 54x400.

Premiums at Chicago.

The Horticultural Society of Chicago has issued its preliminary premium list for the exhibition next fall and it shows some notable changes over last year. In chrysanthemums, cut blooms, there are classes for six light yellow and dark yellow, and light pink and dark pink in which Bonnaffon and Viviand-Morel are the respective color standards. For best vase of 100 blooms there is a premium of $50, and $35 for a vase of 100, no bloom to exceed four inches in diameter. There are liberal prizes for pompons and anemones, also classes for seedlings in which Bonnaffon and Morel are again color standard. The best specimen plant gets an added premium of $15, as does the best group in the classes for three and five specimens. For three standard geraniums the premiums are $50 and $35; for the best fifteen of one variety, $40 and $25. For fifty American Beauties there is $40, $25 and $15; for seventy-five Liberty, $35 and $25; for 100 Golden Gate, Kaiserin, Bride and Bridesmaid, in each class, $20 and $12. The rose classes for twelve and twenty-five blooms are dropped, those for forty blooms continued as last year. There are thirteen classes for new carnations with premiums of $10 and $7, besides the usual classes for standard varieties. Once judging will suffice. Copies of the list may be had by addressing the secretary, Room 1002, 185 Dearborn street, Chicago.

Society of American Florists.

DEPARTMENT OF PLANT REGISTRATION.

Messrs. Schmidt & Botley, Springfield, Ohio, who registered new Rose America on November 30, 1901, advise the secretary's office that they have learned that an old rose, introduced many years ago under the name America, is still in existence and catalogued by some dealers. They ask, therefore, to have the registration entry changed from America to Young America, by which name their new rose will hereafter be known. It is described as a hybrid tea, the result of Duke of Edinburgh × Meteor. Buds large, pointed; flowers large, double, fragrant; color deep scarlet crimson; foliage large, dark, leathery.

This voluntary action on the part of Messrs. Schmidt & Botley, after they had gone to considerable expense in cataloging and advertising their new rose under the name first given should, and doubtless will, secure for them the commendation and gratitude of the entire trade.

A. L. Thorne, Flushing, N. Y., registers Carnation White Layde, (Flora Hill × Mrs. Bradt); color clear ivory white; size three and one-quarter inches and over; stems long and stiff; calyx does not split; steady bloomer.

WM. J. STEWART, Sec'y.

Concerning Puppy Dogs.

Once upon a time there was a small dog with an exceedingly long and fluffy tail. Also the hair upon the other parts of his carcass was long and stiff and curly, so that it stood out from his body in such wise that he had the appearance of being "quite some" of a dog. Also he was possessed of quite a phenomenal voice, insomuch that the chance passer-by was apt to be scared half out of his wits by the fearsomeness of his bark. Also he was of a quarrelsome disposition and a fierce appearance.

Now for a long time this dog had successfully put to flight such small boys and such dogs, of not too large a size and not too belligerent an appearance, as passed by his domicile. And this continued for so long a time and with so much success that the small dog of whom this story is told became very much puffed up and swelled in his head, to such an extent that he came really to believe that he was as much of a dog as he looked, and sounded, and acted to be; and thereby came about troublous times and the final downfall of the aforesaid dog, namely, he of the long and fluffy tail and the fierce bark and the quarrelsome disposition.

Now it came about in this manner. Upon a day there ambled down the street, at the heels of his master, a dog of medium size, but to the close observer, somewhat large and broad of head. This stranger dog was apparently of a meek and retiring disposition, and to the foolish imagination of the first-mentioned dog, was an easy mark; so he left the protection of the front fence, and, with his fiercest bark, flew savagely at the stranger dog. Alas and alack! The stranger dog consisted of about twenty-two pounds of bull terrier ginger. He wasn't very much of a barker, but had had experience in the past with several different kinds of dogs. There is nothing more to chronicle, except one snap, one shake, then four and one-half pounds of dog with a long and fluffy tail and long and curly hair, lying by the wayside, barkless forevermore, while the bull terrier ambled on.

Now the moral of this tale runs in this wise; that had this foolish little dog remained safely behind the front fence he might still be able to bark some more. How much more discrete are the actions of those who, safely sheltered under a non de plume, criticise the work of exhibition judges who have endeavored to perform their disagreeable task as fairly and as impartially as the ability was given them so to do. TERRIER.

OBITUARY.

PAUL DUCRET.

Paul Ducret, who has conducted greenhouses at Union Cemetery, Kansas City, since 1883, died March 12, of appendicitis. He was ill only a few hours. Mr. Ducret was born at Geneva, Switzerland, in 1850. In 1876 he made Kansas City his home, and a few years later began the culture of flowers. A wife and three children survive him. He was a Mason and took active part in the affairs of the Gruetli Verein, a branch of a Swiss patriotic society.

JAMES SUTHERLAND.

James Sutherland, Jr., of Athol, Mass., died on March 14, aged 52 years. Mr. Sutherland had been in failing health for more than a year. He learned his business as a gardener and florist in Scotland, coming to this country when he was 25 years of age. Up to seven years ago he was in business in Winchendon. He sold out and removed to Athol, where he has been in business since. He leaves a wife, three sons and one daughter, besides four brothers all in the florist business, one of these being George A. Sutherland, the wholesaler, of Boston.

Catalogues Received.

Samuel C. Moon, Morrisville, Pa., trees and shrubs; Sutton & Sons, Reading, England, wholesale and retail seeds; Webster Bros., Hamilton, Ont., plants and shrubs; Henry Eckford, Wem, Shropshire, England, sweet peas; Frantz De Laet, Contich, Belgium, cacti; P. S. Peterson & Son, Chicago, trees and shrubs; Pinehurst Nurseries, Pinehurst, N. C., plants and seeds; Phœnix Nursery Co., Delavan, Wis., trees and shrubs; Klehm's Nurseries, Arlington Heights, Ill., trees and shrubs; Chas. B. Hornor & Son, Mt. Holly, N. J., trees and shrubs; N. L. Willett Drug Co., Augusta, Ga., seeds; Isaac Hicks & Son, Westbury Station, N. Y., trees; Ellwanger & Barry, Rochester, N. Y., trees and shrubs, A. B. Howard & Son, Belchertown, Mass., petunias; John H. Dunlop, Toronto, Ont., plants and cut flowers; Lager & Hurrell, Summit, N. J., orchids; Henry W. Gibbons, New York, greenhouse building materials; W. W. Barnard & Company, Chicago, seeds; Livingston Seed Com-

pany, Columbus, O., seeds; M. B. Faxon, Boston, Mass., pansies; Armand Kerlec & Sons, New Orleans, La., seeds and plants; G. Herbert Haszard, Charlottetown, Prince Edward Island, dahlias; Wm. H. Moon Company, Morrisville, Pa., trees, shrubs and plants; Osman & Company, London, England, florists' supplies; L. Boehmer & Company, Yokohama, Japan, seeds and bulbs; Thomas Meehan & Sons, Germantown, Philadelphia, Pa., trees and shrubs.

SALT LAKE CITY, UTAH.—There is a noticeable demand for daffodils and violets, which are being shipped in from the east. Less and less stock is being received from California, the western growers not seeming to know how to pack flowers properly for shipment. However, lilies still continue to come from California.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of ten cents a line (six words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

For Sale at a Bargain

Greenhouses, 25,000 square feet of glass, all in good condition and paying well; within 20 miles of Chicago. Owner is going to retire from business. Address F S, care American Florist.

TRUSTEE'S SALE

—OF—

MORRIS FLORAL COMPANY

You are hereby notified that on **TUESDAY, April 1, 1902,** at 2 o'clock p. m., at the greenhouse of The Morris Floral Co., located at the city of Morris, Grundy County, Illinois, I will offer for sale and will sell at public auction, to the highest and best bidder, free of all incumbrance, all of the property both real and personal, belonging to the said estate. None of the property mentioned herein to be removed until the sale is confirmed by the Court, which confirmation will be had within a very few days after the sale.

The above property is located at a city of 1,500 population, 60 miles from Chicago on the Chicago, Rock Island & Pacific Ry. Six trains running to Chicago every morning, and product can be on the Chicago market at a very early hour of the day.

This property consists of 6 acres of land, 12 greenhouses having an area of 20,000 feet of glass, with a stock of carnations, lilies, geraniums, Asparagus Sprengeri, Asparagus plumosus, roses petunias, pansies and other plants usually found in greenhouses.

The greenhouses are steam heated, the heating apparatus being in good condition. The soil surrounding the greenhouses is unexcelled for raising plants.

Two neat cottages, also good barn and well with windmill are on the premises. If you are looking for an opening in the floral business you will certainly find a bargain in this place.

Any further information desired can be obtained from the undersigned trustee.

Terms of Sale—Fifteen per cent cash on day of sale, balance when sale is confirmed by the Court.

GEORGE W. ANDERSON, Trustee, Morris, Ill.

At home and abroad.

The Most Important Thing

To consider in buying Cut **Easter Lilies** is quality, not the price. Poor Easter Lilies are dear at any price. As in former years we will again have A No 1 Easter Lilies. It is still too early to set a price on Lilies, but you may be sure that we will bill them at the right price, as we do with everything.

Of course you understand that we have everything in the flower line, such as Roses, American Beauties, Carnations, Valley, Violets (our violets are the finest grown), Smilax, Daffodils, Tulips, Sweet Peas, Romans, Paper Whites, Asparagus, etc., etc.

THE SEED TRADE.

AMERICAN SEED TRADE ASSOCIATION.

J. E. NORTHRUP, Pres.; S. F. LEONARD, Vice-Pres.; S. F. WILLARD, Wethersfield, Conn., Sec'y and Treas.

Twentieth annual convention, Twin Cities, Minn., June, 1902.

THE Wholesale Seedsmen's League held a meeting in New York city March 19.

H. W. BUCKBEE, Rockford, Ill., who had his leg and arm broken in falling down an elevator shaft some time ago, is improving slowly.

THE freesia crop prospects in Southern California are reported improved by recent rains; a larger proportion of small sized bulbs is expected.

FROM Oconto, Wis., come reports from 2,000 to 2,500 acres planted to Alaska peas and it is expected $30,000 will be paid this fall to farmers for the crops of this variety.

VISITING WASHINGTON:—Frank T. Emerson, H. H. Harries, J. E. Northrup, and representatives of other seed houses. The Department of Agriculture is considering bids for the supply of seeds for the coming year. Bids closed March 21.

Plan of Seed Distribution.

The following is the full text of Prof. B. T. Galloway's approved recommendations to the Secretary of Agriculture with regard to changes in the plan of free seed distribution:

WASHINGTON, D. C., February 28, 1902.

HON. JAMES WILSON, Secretary of Agriculture,

SIR:—I have the honor to submit herewith a statement setting forth certain changes which, in our judgment, would increase the value and efficiency of the work connected with the purchase, propagation and distribution of seeds, plants, etc., by the Department. In order to make this statement as concise as possible I have condensed the main points in the following paragraphs:

1. The work connected with the Seed and Plant Introduction and Congressional Seed Distribution to be in charge of one officer who shall report directly to the Chief of the Bureau. The adoption of this plan will enable us to considerably facilitate the work, as under the present system there is an increasing division of labor which makes it difficult to expedite business at certain times.

2. The Seed and Plant Introduction work to be conducted in such a way as to concentrate effort on a comparatively few crops and to continue work on such crops until their success or failure commercially is fully established. The work will cover not only the introduction of rare seeds and plants from foreign countries, but their further propagation and dissemination after being brought here. It will also include the bringing together and publishing of papers on matters pertaining to the work, the keeping of all records, etc. Wherever it is practicable to do so the growing and testing of seeds and plants introduced will be carried on in co operation with the Experiment Stations in the several states. The main object of this work is to build up new industries in the country, and for this reason the investigations will often lead into broad questions on various commercial matters. Thus, the introduction of macaroni wheat not only means successfully demonstrating that such wheat can be grown at a profit in certain sections of the country, but that it will find a market after being produced. Markets, therefore, must be created and manufacturers interested to the end that they will take the wheat grown and be able to make a commercial success of the products produced therefrom.

3. The Congressional Seed Distribution proper is to be conducted so as to confine it as closely as possible to new, rare and special seeds and plants, and the building up of agriculture and horticulture by demonstration experiments with the seeds and plants distributed. For the present, and for convenience only, the work may be divided into two classes; (a) the distribution of special seeds and plants such as forage crops, tobacco, cotton, sugar beets, cereals, etc., and (b) the distribution of miscellaneous vegetable and flower seeds secured as hereafter described. In the handling of the special seeds and plants due attention will be paid to the requirements of different sections of the country, and the crops will be so selected as to improve the conditions of the districts into which the seeds and plants are sent. A promising forage crop will be distributed in a section where knowledge of soil and climate indicate success and where the co-operation of a sufficient number of farmers can be obtained to make the work in a measure a demonstration experiment. The same plan can be followed with tobacco, cotton and the other special crops, particular attention being given to comparatively new things. In this connection the plant breeding work carried on by the Bureau can be brought into service in the matter of introducing and distributing the things obtained as a result of the plant breeding work. A careful system of record keeping will be established so that the benefit derived from the work can be followed.

In the miscellaneous distribution of vegetable and flower seeds the work will be so conducted as to gradually introduce new, or little known things, dropping them after the first or second year and allowing the demand created for them (if demand there be) to be supplied by the trade. The seedsmen of the country are constantly on the lookout for new things, and every year there is offered to the public varieties of vegetables and flowers which may have advantages over the older sorts in a number of ways. Our work may be so carried on as to aid in disseminating these novelties and specialties, taking care, of course, that nothing is sent out without some good claim to value and to newness. To determine this for ourselves, arrangements can be make with such of the State Experiment Stations as may be necessary to carry on co-operative tests of the varieties in advance of their distribution, thus making it possible to eliminate the things that give little promise of value. The novelties secured and sent out should, in our judgment, be distributed under the name of the introducer, first because credit of this kind should be given, and second for the reason that it will at once be a guarantee and a protection to the Department, for no reputable firm can afford to have anything go out that may injure its standing in the trade.

It is believed that the best interests of the work will be subserved by adopting a different method of securing the miscellaneous seed. Instead of placing this whole matter in the hands of a contractor it is believed that better results will be obtained by the Department securing the seed in the open market and arranging through a contractor for its packeting, assembling and other work connected therewith. To carry out this plan to the best advantage the country should be divided into districts according to climatic requirements, and certain assortments adapted to those districts should be distributed therein. Aside from the benefit derived from each district getting the things best suited to it, the plan will do away with the necessity of having to secure such large quantities of a variety, thus enabling the Department to decrease the families and increase the number of varieties. As an adjunct to this work the Department will broaden its variety testing experiments to include not only all the seed sent out, but such of the novelties and specialties offered by the trade in their catalogues as it is practicable to secure in the open market. This work will not only be carried on in the gardens at Washington, but as already indicated, a part will be done at certain of the State Experiment Stations as well. In the matter of vitality tests it is believed that better results will be obtained by doing away with arbitrary standards and adopting a plan whereby the requirements will represent the average condition of the particular kind of seed concerned in the open market. Thus, instead of requiring lettuce to have a vitality of 90 per cent or more, the variety in question should be required to show a vitality equal to samples of the same thing grown under as nearly the same conditions as possible and purchased in the open market.

Believing that the foregoing plan, which touches only the main points, will materially advance the work, and trusting that the same meets with your approval, I remain,

Very respectfully,

(Signed) B. T. GALLOWAY, Chief of Bureau.

Approved: (Signed) JAMES WILSON.

THE NURSERY TRADE.

AM. ASSOCIATION OF NURSERYMEN.
R. C. BERCKMANS, Pres.; R. J. COE, Vice-Pres.
GEORGE C. SEAGER, Rochester, N. Y., Sec'y.
Twenty-seventh annual convention, Milwaukee, Wis., June, 1902.

THE Luke Brothers Company has been incorporated at Chicago with a capital stock of $25,000.

THE Utah Nursery Co., of Salt Lake City, is fighting the condemnation proceedings of the Rio Grande Western Railway, which seeks a right of way through its nursery grounds.

IT is reported that the zero weather of January, following a mild mid-winter, has resulted in a poor showing of buds of peaches, plums, cherries and even apples in Missouri, Tennessee and Georgia.

St. Paul.

TRADE VARIABLE BUT GOOD ON THE WHOLE. —FINE PROSPECTS FOR EASTER.—OTHER NOTES.

Trade has its ups and downs, up one day and down the next, though on the whole it has been most favorable. The weather, which has been extremely warm, changed suddenly cold on Saturday and the mercury hovers near the zero mark, with a strong northwest wind blowing at a forty mile gate. There is a good supply of seasonable stock in the growers' hands for Easter and every indication points to extremely good sales. Lilies are fairly plentiful, with a good supply of spiræa, hydrangeas, roses, azaleas and so forth. Cut flowers will be in good supply and prices will be moderate unless severe weather should prevail.

Holm & Olsen have purchased glass, intending to erect two or three greenhouses the coming season.

R. C. Seeger has opened a flower counter in a department store here.

FELIX.

CHAMPAIGN, ILL.—Work is being pushed rapidly forward on the new I. C. R. R. greenhouses and they will soon be ready to be stocked with spring bedding plants.

MILWAUKEE, WIS.—Robert W. Schenck, who came here from California, has purchased a tract of land on State street, near the cemetery and plans to erect a large range of greenhouses.

Clematis.
Strong field-grown, 2 and 3 year plants, 30c to 35c each; $1.00 per dozen.

LILIUM HARRISII.

As reliable stock as is produced on the Island, raised, crop-rogued, inspected, and packed by a grower always on the ground.

We offer this (V) brand of Harrisii as averaging the most reliable stock exported. Orders placed now can be supplied, late ones could not be filled last year and may not be this. Write for prices on 5 to 7, 7 to 9, and 9 to 11.

White Roman Hyacinths.

12 ctms. and upward, being the whole crop above the 12 ctm. size, no 13 to 15 ctms. being taken out.

159,000 of this grade imported by us the past season proved very satisfactory and we offer 1902 crop of same, confident that this grade contains the best value possible for the price, which is made for early orders. Remember the size contains all the bulbs in the crop above 12 ctms. and up to 16 ctms. Write for prices.

N. B.—Our usual percentage of extra early deliveries will be made.

Vaughan's Seed Store, CHICAGO. New York.

GOOD PROSPECTS FOR NEXT WEEK'S TRADE. —EVERYONE HAS STOCK.

Everybody is making preparations for the Easter trade. There will be plenty of Lilium longiflorum, hyacinths, tulips, hydrangeas, Crimson Rambler roses and lilacs, in the plant line, and roses, carnations and violets promise to be plentiful. A. Gude & Brother will have a fine stock. Two houses of Kaiserin Augusta Victoria will be in full blast by March 25.

F. H. Kramer has a large batch of Lilium longiflorum in bloom, also a number of Crimson Rambler roses.

J. R. Freeman is cutting a fine lot of carnations, violets and roses, also lilies, narcissi, hyacinths and tulips.

P. G.

BEVERLY, MASS.—B. Larcom has leased a new store at the corner of Cabot and Liberty streets and will open on April 1 one of the best equipped establishments in this county.

Retailers Attention **BRANT & NOE,** Forest Glen, Chicago, Rose Specialists, careful selectors and packers of Roses, would like 3 more first-class retail florist customers. Have pleased patrons nine years straight. Can and will please you.

BUSINESS BRISK.—MANY SOCIAL AND MORTUARY EVENTS CALL FOR GOOD MATERIAL.—MANY AZALEAS GROWN.

Flower trade for the past week was again rather brisk, owing perhaps to an unusually heavy demand for funeral work, though quite a number of dinner and luncheon decorations assisted materially in using up the better grade of stock. Retail prices for ordinary grades are lower than they have been at any time this winter, but select stock holds its own and is not over-plentiful. For the past three years we have had no wholesale dealer here. The growers sell direct to the retailers and the latter are obliged to obtain a daily additional supply from out of town. Good roses, especially, are scarce in our vicinity.

Easter stock looks very promising in nearly every establishment. Flowering plants of all description will be very plentiful. Looking over the immense stock of azaleas in different places, it seems quite impossible to dispose of one-half the quantity in a city like ours. A very fine lot of Primula obconica of bright colors and densely covered with flowers, in 7-inch pots, has made its appearance in the market.

The E. R. Fry Company has moved to more commodious quarters further up the street, on the corner of East Main and Clinton avenue North. The new store is much lighter than the old stand and looks more cheerful with the abundant display of flowering plants exhibited in the windows. J. B. K.

LENOX, MASS.—Peter Fisher's Gov. Wolcott carnation was awarded a certificate of merit at the March 1 meeting of the horticultural society. On March 15 J. K. M. L. Farquhar delivered a lecture on "Darkest Russia."

CARNATIONS

ROOTED CUTTINGS, Strong Healthy Stock.

CLUB HOLDS AN IMPORTANT SESSION.—GOVERNMENT GRANT LIKELY.—BUSINESS QUIET.—VARIOUS NOTES.

The Gardeners' and Florists' Club held a good meeting March 10 The report of the special committee appointed to interview the government was quite satisfactory and a grant of the Department of Agriculture is likely to be received by the club. A new hall for our meetings was rented at last. In the hall previously looked for, no smoking being allowed, it was not the right place for gardeners or florists and was dropped of course. C. A. Smith was presented with a gold watch, the trophy won three times by him at our chrysanthemum show.

The weather is on the thawing side, giving trouble in delivery. Business in general is inclined to be quiet, with a plentiful stock of flowers, bringing the prices low. Daffodils, double and single, are not paying this year. Carnations are good and plentiful. Roses, violets and lily of the valley are the cut flowers mostly demanded.

Montreal was tramped all over by the eighteen Dutchmen of the "Statendam." Bulb culture must be a paying business, judging from the endless list of travelers.

Geo. Robinson assumed his new duties on March 1. We heartily wish to the new firm Hall & Robinson the success they deserve.

S. S. Bain is cutting the best Bride and Bridesmaid roses I have ever seen.
